Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-002443-PIP02-18
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	14 February 2024
Is this the analysis of the primary completion data?	Yes
Primary completion date	10 October 2023
Global end of trial reached?	Yes
Global end of trial date	10 October 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

- 1) To evaluate the efficacy of oral gepotidacin compared to IM ceftriaxone plus oral azithromycin to treat participants with uncomplicated urogenital gonorrhea caused by *Neisseria gonorrhoeae* (NG)
- (2) To evaluate the efficacy of oral gepotidacin compared to IM ceftriaxone plus oral azithromycin to treat participants with rectal gonorrhea caused by NG
- (3) To evaluate the efficacy of oral gepotidacin compared to IM ceftriaxone plus oral azithromycin to treat participants with pharyngeal gonorrhea caused by NG
- (4) To evaluate the safety and tolerability of oral gepotidacin compared to IM ceftriaxone plus oral azithromycin

Protection of trial subjects:

Not Applicable

Background therapy:

Not Applicable

Evidence for comparator: -

Actual start date of recruitment	21 October 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 105
Country: Number of subjects enrolled	Germany: 139
Country: Number of subjects enrolled	Mexico: 15
Country: Number of subjects enrolled	United Kingdom: 98
Country: Number of subjects enrolled	United States: 85
Country: Number of subjects enrolled	Spain: 186
Worldwide total number of subjects	628
EEA total number of subjects	325

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	2
Adults (18-64 years)	623
From 65 to 84 years	3
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

None

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Gepotidacin

Arm description:

Participants with uncomplicated urogenital gonorrhea (GC) were randomized to receive first dose of 3000 milligram (mg) (4*750 mg, tablets) gepotidacin orally on Day 1. Participants self-administered second dose of 3000 mg (4*750 mg, tablets) gepotidacin orally 10-12 hours after first dose. All doses were to be administered after food consumption and with water.

Arm type	Experimental
Investigational medicinal product name	Gepotidacin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants with uncomplicated urogenital gonorrhea (GC) were randomized to receive first dose of 3000 milligram (mg) (4*750 mg, tablets) gepotidacin orally on Day 1. Participants self-administered second dose of 3000 mg (4*750 mg, tablets) gepotidacin orally 10-12 hours after first dose. All doses were to be administered after food consumption and with water.

Arm title	Ceftriaxone plus azithromycin
------------------	-------------------------------

Arm description:

Participants with uncomplicated urogenital gonorrhea (GC) were randomized to receive single dose of 500 mg Ceftriaxone as intramuscular sterile powder reconstituted with appropriate diluent plus single oral dose of 1 gram (g) Azithromycin (2*500 mg, tablets) on Day 1. Azithromycin was to be administered after food consumption and with water.

Arm type	Active comparator
Investigational medicinal product name	Ceftriaxone plus azithromycin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet, Powder for injection
Routes of administration	Oral use, Intramuscular use

Dosage and administration details:

Participants with uncomplicated urogenital gonorrhea (GC) were randomized to receive single dose of 500 mg Ceftriaxone as intramuscular sterile powder reconstituted with appropriate diluent plus single oral dose of 1 gram (g) Azithromycin (2*500 mg, tablets) on Day 1. Azithromycin was to be administered after food consumption and with water.

Number of subjects in period 1	Gepotidacin	Ceftriaxone plus azithromycin
Started	314	314
Safety population	309	313
Microbiological ITT(Micro-ITT)population	202 ^[1]	204 ^[2]
Micro-ITT Rectal population	26 ^[3]	15 ^[4]
Micro-ITT Pharyngeal population	18 ^[5]	17 ^[6]
Completed	294	295
Not completed	20	19
Consent withdrawn by subject	4	1
Physician decision	-	2
Adverse event, non-fatal	3	-
Protocol Deviation	-	1
Randomized in Error/ Mistake	2	-
Participant Did Not Receive IP	-	1
Lost to follow-up	10	14
Eligibility Criteria Unable to Evaluate	1	-

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Intermediate milestones are a subset of started population. Hence number of participants at the milestones are less than started.

[2] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Intermediate milestones are a subset of started population. Hence number of participants at the milestones are less than started.

[3] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Intermediate milestones are a subset of started population. Hence number of participants at the milestones are less than started.

[4] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Intermediate milestones are a subset of started population. Hence number of participants at the milestones are less than started.

[5] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Intermediate milestones are a subset of started population. Hence number of participants at the milestones are less than started.

[6] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Intermediate milestones are a subset of started population. Hence number of participants at the milestones are less than started.

Statistical analyses

Statistical analysis title	Statistical Analysis 2
Statistical analysis description:	
The difference in microbiological success rates between treatment groups (Gepotidacin - Ceftriaxone plus azithromycin) was calculated using the Miettinen-Nurminen Summary Score Method adjusted for sex and sexual orientation combination. Superiority was declared if the lower limit of the 2-sided 95% confidence interval for the difference was above 0.0%.	
Comparison groups	Gepotidacin v Ceftriaxone plus azithromycin
Number of subjects included in analysis	406
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.5072
Method	1-sided p-value for TestOfSuperiority
Parameter estimate	Adjusted Difference in Percent
Point estimate	-0.1
Confidence interval	
level	95 %
sides	2-sided
lower limit	-5.6
upper limit	5.5

Statistical analysis title	Statistical Analysis 1
Statistical analysis description:	
The difference in microbiological success rates between treatment groups (Gepotidacin - Ceftriaxone plus azithromycin) was calculated using the Miettinen-Nurminen Summary Score Method adjusted for sex and sexual orientation combination. Non-inferiority was declared if the lower limit of the 2-sided 95% confidence interval for the difference was above -10.0%.	
Comparison groups	Gepotidacin v Ceftriaxone plus azithromycin
Number of subjects included in analysis	406
Analysis specification	Pre-specified
Analysis type	non-inferiority
Parameter estimate	Adjusted Difference in Percent
Point estimate	-0.1

Secondary: Number of participants with any treatment-emergent adverse events (TEAEs) and any serious adverse events (SAEs) - Safety population

End point title	Number of participants with any treatment-emergent adverse events (TEAEs) and any serious adverse events (SAEs) - Safety population
-----------------	---

End point description:

An adverse event (AE) is any untoward medical occurrence in a clinical study participant, temporally associated with the use of a study treatment, whether or not considered related to the study treatment. A TEAE is an event that emerges during treatment having been absent pretreatment or worsens relative to the pretreatment state. An SAE is defined as any untoward medical occurrence that, at any dose, results in death; was life threatening; required hospitalization or prolongation of existing hospitalization; resulted in disability/incapacity; was a congenital anomaly/birth defect.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All cause mortality, non-serious adverse events (Non-SAEs) and serious adverse events (SAEs) were collected from Day 1 through the final follow-up visit (up to 21Days)

Adverse event reporting additional description:

Safety population included all participants who received at least 1 dose of study treatment.

Assessment type	Systematic

Reporting groups

Reporting group title	Ceftriaxone plus azithromycin
-----------------------	-------------------------------

Reporting group description:

Participants with uncomplicated urogenital gonorrhea (GC) were randomized to receive single dose of 500 mg Ceftriaxone as intramuscular sterile powder reconstituted with appropriate diluent plus single oral dose of 1 gram (g) Azithromycin (2*500 mg, tablets) on Day 1. Azithromycin was to be administered after food consumption and with water.

Reporting group title	Gepotidacin
-----------------------	-------------

Reporting group description:

Participants with uncomplicated urogenital gonorrhea (GC) were randomized to receive first dose of 3000 milligram (mg) (4*750 mg, tablets) gepotidacin orally on Day 1. Participants self-administered second dose of 3000 mg (4*750 mg, tablets) gepotidacin orally 10-12 hours after first dose. All doses were to be administered after food consumption and with water.
