**General information about the trial**

Main objective of the trial:

Percentage of patients alive and without progression at 4 months of FOLFIRI plus durvalumab versus FOLFIRI plus durvalumab plus tremelimumab in patients with advanced-stage gastric or gastro-oesophageal junction adenocarcinoma and who progressed after a first line chemotherapy (based on RECIST 1.1 rating scale evaluated by the investigator).

Protection of trial subjects:

The study complies with the Declaration of Helsinki and the principles of Good Clinical Practice guidelines. Informed consent was obtained prior to inclusion of each patient.

## Subject disposition

### Recruitment

#### Recruitment details:

Between August 27, 2020 and June 4, 2021, 96 patients in 37 centres were randomised and 92 patients received one or more doses of the treatment (mITT population, n=92, 47 in FD arm and 45 in FDT arm). One patient randomized in the FD arm received the FDT treatment and was analysed in the FDT arm for safety analyses.

### Pre-assignment

#### Screening details:

Main inclusion criteria were patients aged 18 years or older, histologically proven advanced unresectable (locally advanced or metastatic) gastric/GEJ (Siewert 2 or 3) adenocarcinoma, with progression or intolerance after first-line chemotherapy with fluoropyrimidine plus platinum salt +/- taxane +/- anti-HER2 therapies, PS 0 or 1.

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: One patient died before the start of treatment

[2] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: 3 patients were never treated in the protocol
