

Clinical trial results:

A 52-Week, Open-Label, Single-Arm Study to Evaluate the Safety and Tolerability of 24-Hour Daily Exposure of Continuous Subcutaneous Infusion of ABBV-951 in Subjects with Parkinson's Disease

Summary

EudraCT number	2018-002144-85
Trial protocol	GB DK NL ES BE DE IT
Global end of trial date	17 August 2022

Results information

Result version number	v2 (current)
This version publication date	10 November 2023
First version publication date	30 August 2023
Version creation reason	<ul style="list-style-type: none">• Correction of full data set Minor clarifying edits to related to units of measure and an endpoint title.

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	17 August 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	17 August 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The purpose of this study was to assess the safety and tolerability of ABBV-951 (Foslevodopa/Foscarbidopa) in participants with Parkinson's disease (PD).

This was a single-arm study with preplanned analyses conducted by dose subgroup (Low Dose or High Dose) based on the modal total daily dose (most frequent dose) over the treatment period.

Protection of trial subjects:

Subject read and understood the information provided about the study and gave written permission.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	29 April 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 7
Country: Number of subjects enrolled	Canada: 9
Country: Number of subjects enrolled	Australia: 27
Country: Number of subjects enrolled	Denmark: 9
Country: Number of subjects enrolled	Germany: 15
Country: Number of subjects enrolled	Italy: 6
Country: Number of subjects enrolled	Japan: 27
Country: Number of subjects enrolled	Netherlands: 6
Country: Number of subjects enrolled	Russian Federation: 8
Country: Number of subjects enrolled	Spain: 28
Country: Number of subjects enrolled	Sweden: 8
Country: Number of subjects enrolled	United Kingdom: 13
Country: Number of subjects enrolled	United States: 81
Worldwide total number of subjects	244
EEA total number of subjects	79

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	119
From 65 to 84 years	124
85 years and over	1

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

This study had a 10 to 42-day Screening Period, during which a 6-day Monitoring Period was completed.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	ABBV-951 Low Dose Subgroup

Arm description:

After a 4-week Optimization Period, participants continued receiving ABBV-951 by continuous subcutaneous infusion (CSCI) during the 48-week Maintenance Period. Participants whose modal total daily dose (most frequent dose) over the entire study was < 2530 mg of Foslevodopa/day were analyzed as the Low Dose Subgroup.

Arm type	Experimental
Investigational medicinal product name	ABBV-951
Investigational medicinal product code	
Other name	Foslevodopa/Foscarbidopa
Pharmaceutical forms	Solution for infusion
Routes of administration	Subcutaneous use

Dosage and administration details:

Solution for continuous subcutaneous infusion (CSCI)

Arm title	ABBV-951 High Dose Subgroup
------------------	-----------------------------

Arm description:

After a 4-week Optimization Period, participants continued receiving ABBV-951 by continuous subcutaneous infusion (CSCI) during the 48-week Maintenance Period. Participants whose modal total daily dose (most frequent dose) over the entire study was \geq 2530 mg of Foslevodopa/day were analyzed as the High Dose Subgroup.

Arm type	Experimental
Investigational medicinal product name	ABBV-951
Investigational medicinal product code	
Other name	Foslevodopa/Foscarbidopa
Pharmaceutical forms	Solution for infusion
Routes of administration	Subcutaneous use

Dosage and administration details:

Solution for continuous subcutaneous infusion (CSCI)

Number of subjects in period 1	ABBV-951 Low Dose Subgroup	ABBV-951 High Dose Subgroup
Started	131	113
Completed	84	65
Not completed	47	48
Adverse event, non-fatal	23	25
Other, not specified	2	2
Withdrew consent	16	12
Lost to follow-up	-	1
Difficulty with drug delivery system	2	3
Lack of efficacy	4	5

Primary: Number of Participants With Adverse Events

End point title	Number of Participants With Adverse Events ^[1]
-----------------	---

End point description:

An adverse event (AE) is defined as any untoward medical occurrence in a patient or clinical investigation participant administered a pharmaceutical product which does not necessarily have a causal relationship with this treatment. The investigator assesses the relationship of each event to the use of study drug. A serious adverse event (SAE) is an event that results in death, is life-threatening, requires or prolongs hospitalization, results in a congenital anomaly, persistent or significant disability/incapacity or is an important medical event that, based on medical judgment, may jeopardize the participant and may require medical or surgical intervention to prevent any of the outcomes listed above. Treatment-emergent adverse events/treatment-emergent serious adverse events (TEAEs/TEAEs) are defined as any event that began or worsened in severity on or after the first dose of study drug.

End point type	Primary
----------------	---------

End point timeframe:

From first dose of study drug until 30 days following last dose of study drug (up to 480 days)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive data are summarized for this end point per protocol.

End point values	ABBV-951 Low Dose Subgroup	ABBV-951 High Dose Subgroup	ABBV-951 All Participants

Statistical analyses

No statistical analyses for this end point

Primary: Number of Participants With Numeric Grade Equal to or Higher Than 5 and With Letter Grade Equal to or Higher Than D on the Infusion Site Evaluation Scale

End point title	Number of Participants With Numeric Grade Equal to or Higher Than 5 and With Letter Grade Equal to or Higher Than D on the Infusion Site Evaluation Scale ^[9]
-----------------	--

End point description:

Skin tolerability was assessed using the Infusion Site Evaluation Scale, a 2-part numeric (0-7) and letter (A-G) grade scale, where a notable skin reaction is defined as a reaction with a numeric grade of 6 or 7 or a letter grade of D, E, F, or G. Any observation of infusion site reaction with irritation criteria > 2 or > C was recorded as an adverse event (AE).

Primary: Electrocardiogram (ECG) Aggregate QRS Duration: Change From Baseline to End of Study

End point title	Electrocardiogram (ECG) Aggregate QRS Duration: Change From Baseline to End of Study ^[181]
-----------------	---

End point description:

12-lead electrocardiograms (ECGs) were recorded at study visits after the participant had been supine for at least 5 minutes. Participants were instructed to remain stationary (no talking, laughing, deep breathing, sleeping, or swallowing) for approximately 10 seconds during the ECG recording. When an ECG was recorded at a time near that of a blood collection, the ECG was obtained prior to the blood collection. ECGs on Day 1 were recorded after initiation of the continuous subcutaneous infusion (CSCI) of ABBV-951 prior to the end of the study visit.

End point type	Primary

Secondary: Average Daily Normalized "Off" Time: Change From Baseline to End of Study

End point title	Average Daily Normalized "Off" Time: Change From Baseline to End of Study
-----------------	---

End point description:

Upon awakening and every 30 minutes during their normal waking time, participants recorded their state in the Parkinson's Disease Diary (PD Diary) for 2 consecutive days prior to study visits.

"Off" time is defined as periods of poor mobility, tremor, slowness, and stiffness. The daily "On" and "Off" times were normalized to a typical waking day (16 hours) to account for different sleep patterns across participants. When "Off" was the first morning symptom upon awakening, this was considered morning akinesia in this study.

Baseline value is defined as the average of normalized "Off" time collected over the 2 PD Diary days before the Enrollment visit. Negative changes from Baseline indicate improvement.

End point title	Movement Disorder Society-Unified Parkinson's Disease Rating Scale (MDS-UPDRS) Part III Score: Change From Baseline to End of Study
End point description: The Movement Disorder Society-Unified Parkinson's Disease Rating Scale (MDS-UPDRS) is an investigator-used rating tool to follow the longitudinal course of Parkinson's Disease (PD). Part III assesses the participant's motor examination (including Hoehn and Yahr stage) with 33 questions. (The numeric score for each question is between 0-4; 0=Normal,1=Slight,2=Mild,3=Moderate,4=Severe). Part III scores range from 0 to 132, with higher scores indicating more severe symptoms of PD. Negative changes from Baseline indicate improvement.

Secondary: Sleep Symptoms as Assessed by the Parkinson's Disease Sleep Scale-2 (PDSS-2) Total Score: Change From Baseline to End of Study

End point title	Sleep Symptoms as Assessed by the Parkinson's Disease Sleep Scale-2 (PDSS-2) Total Score: Change From Baseline to End of Study
-----------------	--

End point description:

The PDSS-2 consists of 15 questions that evaluate motor and non-motor symptoms at night and upon

wakening, as well as disturbed sleep grouped into 3 domains: motor symptoms at night (5 items), Parkinson's Disease (PD) symptoms at night (5 items), and disturbed sleep (5 items). The frequency is assessed for the 15 sleep problems based on a 5-point Likert-type scale (ranging from 0 [never] to 4 [very often] with the exception of Question 1 score ranging from 0 [very often] to 4 [never]). Scores are calculated for each of the 3 domains as well as a total score. The PDSS-2 domain scores range from 0 to 20 and the total score is a sum of the 3 domains and ranges from 0 to 60. Higher scores indicate higher frequency and more severe impact of PD on sleep. Negative changes indicate improvement from Baseline.

End point title	Quality of Life Assessed by the Parkinson's Disease Questionnaire-39 Items (PDQ-39) Summary Index Score: Change From Baseline to End of Study
-----------------	---

End point description:

The Parkinson's Disease Questionnaire (PDQ-39) is a disease-specific instrument designed to measure aspects of health that are relevant to participants with Parkinson's Disease (PD), and which may not be included in general health status questionnaires. Each item is scored on the following 5-point scale: 0 = never, 1 = occasionally, 2 = sometimes, 3 = often, 4 = always (or cannot do at all, if applicable). Higher scores are consistently associated with more severe symptoms of the disease such as tremors and stiffness. The results can be presented in either domain scores or as a summary index score. The full range of the PDQ-39 summary index score is from 0 (no patient-related symptoms/quality of life unaffected) to 100 (highest patient-related symptoms/low quality of life). Negative changes indicate improvement from Baseline.

End point title	The EuroQol 5-Dimension Questionnaire (EQ-5D-5L) Quality of Life Summary Index: Change From Baseline to End of Study
-----------------	--

End point description:

The EuroQol 5-dimension questionnaire (EQ-5D-5L) is a standardized non-disease specific instrument for describing and valuing health-related quality of life. The EQ-5D-5L descriptive system comprises 5 dimensions of health (mobility, self-care, usual activities, pain/discomfort, and anxiety/depression) to describe the participant's current health state. Each dimension comprises 5 levels with corresponding numeric scores, where 1 indicates no problems, and 5 indicates extreme problems. The health status is converted to an index value using the country-specific weighted scoring algorithm for the United States (US). The summary index value for the US ranges from a worst score of -0.109 to a best score of 1. An increase in the EQ-5D-5L total score indicates improvement.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All-cause mortality is reported from enrollment to end of study; median time on follow-up was 367.0 days for the ABBV-951 Low Dose Subgroup, the ABBV-951 High Dose Subgroup, and the ABBV-951 All Participants group.

Adverse event reporting additional description:

TEAEs and SAEs were collected from first dose of study drug until 30 days after the last infusion; mean time on treatment was 244.9 days for the ABBV-951 Low Dose Subgroup, 240.6 days for the ABBV-951 High Dose Subgroup, and 242.9 days for the ABBV-951 All Participants group.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 November 2018	<p>Version 2.0</p> <ul style="list-style-type: none">-Allowed subjects from Study M15-738 and M15-739 to continue receiving ABBV-951-Added minimum programmable lockout time of 60 minutes-Changed maximum infusion rate from 1.18 to 1.04 mL/hr-Added "Health-related quality of life as assessed by the EuroQOL 5-dimensions questionnaire (EQ-5D-5L)" as a secondary endpoint-Added A 9-mm Cleo 90 infusion set to Table 8
11 February 2019	<p>Version 3.0</p> <ul style="list-style-type: none">-Added Hallucinations/psychosis and somnolence as AESIs-Replace the Minnesota Impulse Disorder Interview (MIDI) with the QUIP-RS-Changed the neurological examination from "symptom-directed" to mandatory and added this to the Week 13 and 39 Visits-Removed assessment of orthostatic vital signs from Visits 6, 7, and 8 (V6, V7, and V8) based on safety data from the Phase 1b study (Study M15-739)-Clarified that during the Monitoring Period (i.e., 6 days before Visit 3 [V3]), subjects should be active (engaged in usual activities of daily living and not sitting or resting on a couch or chair or lying in bed) for at least 30 minutes before taking their first oral dose
28 August 2019	<p>Version 4.0</p> <ul style="list-style-type: none">-Removed the allowance of a legally authorized person to provided informed consent for a subject to participate in the study to ensure that appropriate subjects are enrolled-Added eligibility criterion 17 to clarify and exclude medical conditions for which levodopa is contraindicated-Modified eligibility criterion 22 to add that a female subject cannot donate eggs during the study or within 30 days after the end of study drug infusion and to clarify that a female subject does not intend to become pregnant within 30 days after the end of study drug infusion-Modified eligibility criterion 23 to clarify that a male subject does not intend to donate sperm or father a child within 30 days after the end of study drug infusion-Added language to clarify that MAO-A inhibitors are prohibited from 2 weeks prior to the start of levodopa therapy to the end of the Treatment Period-Added zosinamide to the list of allowable concomitant medications during the Treatment Period-Added device causality definitions were added-Incorporated procedures for reporting of events related to the study device-Reduced the duration of the Monitoring Period between Visits 2 and 3 was reduced from 6 to 2 days in situations where the PKG watch is not allowed, per country regulations. A minimum of a 2-day Monitoring Period is required prior to Visit 3 (Day 1) so that PD Diary data are collected.-Increased the frequency of pregnancy testing for women of childbearing potential to every month during the Treatment Period-Modified the instructions on priming of the infusion set-Added language to state that subjects will be instructed on how to return all devices and ancillaries and that study personnel must document compliance-Modified language to indicate that a loading dose is required if drug is suspended for 3 or more hours-Added language to reflect that 2 interim analyses will be performed during the course of the study.

09 April 2020	Version 6.0 -Added Neria Guard to the list of study devices -Added a post-treatment follow-up call after Week 52 (V13) to the activity schedule -Removed Unscheduled Visits from the Activity Schedule; added text to protocol to describe unscheduled visits -Removed text related to B12 re-testing outside of the 42-day screening period and clarified the B12 levels that are considered eligible at re-test -Removed text about sites submitting digital images; added that sites will request medical records from the dermatologic visit. Upon receipt of records or reports generated from the dermatologic visit, sites will promptly submit them to AbbVie or designee consistent with typical study data reporting requirements
12 February 2021	Version 7.0 -Updated sample size to approximately 240 subjects -Clarified that F3 infusion rate may be reduced beyond the 20% limit from the prescribed base infusion rate (F1) if medically necessary and only with approval from the AbbVie TA MD -Included information on the re-evaluation of the benefit and risk to subjects participating in the study to reflect that there is no additional risk to subjects due to COVID-19 -Modified/added eligibility criteria to minimize additional risk to study subjects or exclude subjects positive for COVID-19 -Clarified that protocol deviations may include modifications due to COVID-19 -Added instructions for COVID-19 pandemic-related acceptable protocol modifications and to refer to the Operations Manual for details on how to handle necessary changes to activities or procedures -Noted that AbbVie will modify the study protocol as necessary due to the COVID-19 pandemic. Investigators must also notify AbbVie if any urgent safety measures are taken -Noted that remote monitoring during the COVID-19 pandemic may be employed as needed -Updated Operations Manual to include details on how to perform specific activities/procedures that may be impacted by changes in global/local regulations due to the COVID-19 pandemic -Added additional details regarding ABBV-951 and infusion site reactions -Added hallucinations/psychosis as a common symptom in patients with PD and included general guidance -Added text to clarify that the appropriate cannula length will be selected by the investigator based on individual subject characteristics (thickness of the abdominal subcutaneous fat tissue) and noted that the investigator should consider instructing the subject to rotate the infusion site more frequently -Added alternative infusion site locations and considerations guidance -Removed references to "caregivers" throughout protocol and Operations Manual -Changed the reporting timeframe for product complaints to 24 hours

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
