

Clinical trial results:

A GINECO phase II trial assessing the safety and efficacy of the Bevacizumab (FKB238), Olaparib (MEDI 4736) and Durvalumab combination in patients with advanced epithelial ovarian cancer in relapse: BOLD

Summary

EudraCT number	2018-002281-39
Trial protocol	FR
Global end of trial date	31 May 2023

Results information

Result version number	v1 (current)

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	12 March 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	12 March 2021
Global end of trial reached?	Yes
Global end of trial date	31 May 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective is the rate of clinical and radiological non-progressive disease, as assessed by immune-related response criteria (irRC) (Wolchok et al. 2009) :

- At 3 months in the PRR cohort
- At 6 months in the PSR cohort

Protection of trial subjects:

The study was conducted in accordance with the ethical principles that have their origins in the Declaration of Helsinki. The trial was conducted in agreement with the International Conference on Harmonisation (ICH) guidelines on Good Clinical Practice (GCP).

Background therapy:

Bevacizumab and olaparib have already been tested on 12 patients in a phase I trial at their usual doses (10 mg/kg q2w and 400 mg bid – 50 mg capsules -, respectively), and no DLTs were observed (Dean et al., 2012). The addition of an anti-VEGF small molecule, cediranib, to olaparib doubled the median PFS in a randomized phase II trial in patients with platinum sensitive relapse, with a manageable safety profile (Liu et al., 2014).

A recently reported phase I trial established the RDP2D of Durvalumab and Olaparib – 150 mg tablets –, when given in combination, at 1500 mg every 4 weeks, and 300 mg bid, respectively (Lee et al. 2017). In addition, the ENGOT/GINECO PAOLA phase III trial is currently evaluating the combination of Olaparib and Bevacizumab as first-line maintenance after platinum-paclitaxel combination, in patients with advanced high-grade serous ovarian carcinoma. Under the hypothesis of a survival benefit in favor of this combination, it would also be of interest to assess the value of adding Durvalumab in order to improve the efficacy of the overall combination.

There are no trials to date assessing anti-VEGF in combination with anti-PARP and anti-PDL1 therapy.

Beside additive efficacy, a synergistic effect could be expected :

- Between bevacizumab and durvalumab, through normalization of blood vessel and potentiation of immunologic infiltration.
- Between olaparib and durvalumab, through cytotoxicity-mediated release of antigens and impairment of mutation repair mechanisms, thereby increasing neoantigen loads.
- Between olaparib and bevacizumab, through tumor environment modulation and signaling of DNA damage inhibition, which has already been tested with the anti-VEGF cediranib.

Evidence for comparator:

The lifetime risk of ovarian cancer is around 1 to 2% in developed countries (Jayson et al., 2014). While there are effective treatment options that significantly prolong survival, advanced ovarian cancer (AOC) is still mostly a fatal disease, which requires additional therapeutic options. After first-line cytoreductive surgery and chemotherapy, 70 % of patients achieving complete remission will relapse. In patients with platinum sensitive relapse, long remissions may be obtained by platinum containing chemotherapy regimens and, in some cases, by surgery. Bevacizumab is indicated in first-relapse, in patients who did not previously receive this drug. Olaparib is SoC for mBRCA ½ PSR maintenance patients. However, relapsing AOC is no longer a curable disease and iterative relapses usually occur. In patients with platinum resistant disease, non-platinum cytotoxic agents such as paclitaxel, liposomal doxorubicin, or topotecan are indicated, in combination with bevacizumab, but the overall prognosis remains poor. There is clearly an unmet therapeutic need in patients with either platinum-resistant relapse or platinum-sensitive relapse.

Actual start date of recruitment	01 March 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	France: 74
Worldwide total number of subjects	74
EEA total number of subjects	74

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	33
From 65 to 84 years	40
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

Patients were recruited between 01/03/2019 and 23/01/2020

Pre-assignment

Screening details:

93 patients were eligible in which 19 were excluded, 74 were enrolled and treated (41 in Platinum-resistant relapse cohort and 33 in Platinum-sensitive relapse cohort)

Period 1

Period 1 title	Overall period (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

NA

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Platinum-resistant relapse (PRR) cohort
------------------	---

Arm description:

Platinum-resistant relapse was defined as disease progression <6 months after the last platinum dose and ≥ 1 line of previous platinum and taxane-containing chemotherapy.

Arm type	Experimental
Investigational medicinal product name	Olaparib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Olaparib 300mg was administered orally twice daily

Investigational medicinal product name	FKB238
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

FKB238 (bevacizumab biosimilar; Centus Biotherapeutics, Cambridge, UK) 15mg/kg was administered once every 3 weeks (Q3W) intravenously (initially 90min, subsequently 60, then 30min if well tolerated).

Investigational medicinal product name	Durvalumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Durvalumab 1.12g was administered Q3W, 1-h intravenous infusion, more than 1h after olaparib, starting from Cycle 1. Subsequent infusion durations could be reduced.

Arm title	Platinum-sensitive relapse (PSR) cohort
------------------	---

Arm description:

Platinum-sensitive relapse was defined as disease progression ≥ 6 months after the last platinum dose in

any prior line.

Arm type	Experimental
Investigational medicinal product name	Olaparib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Olaparib 300mg was administered orally twice daily

Investigational medicinal product name	FKB238
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

FKB238 (bevacizumab biosimilar; Centus Biotherapeutics, Cambridge, UK) 15mg/kg was administered once every 3 weeks (Q3W) intravenously (initially 90min, subsequently 60, then 30min if well tolerated).

Investigational medicinal product name	Durvalumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Durvalumab 1.12g was administered Q3W, 1-h intravenous infusion, more than 1h after olaparib, starting from Cycle 1. Subsequent infusion durations could be reduced.

End point title	Progression free survival (PFS) : Time in months
-----------------	--

End point description:

Median PFS (per RECIST and/or clinical progression) was 4.1 months (95% CI 3.5–5.9) in platinum-resistant patients and 4.9 months (95% CI 2.9–7.0) in platinum-sensitive patients. Efficacy outcomes were similar using irRECIST, with higher non-progression rates and longer median PFS in both groups: 5.4 months (95% CI 4.0–7.2) vs 7 months (95% CI 3.3– +Inf, which was published as the value 9999 in this EudraCT database), respectively.

Serious adverse events	Platinum resistant relapse (PRR)	Platinum sensitive relapse (PSR)	
Total subjects affected by serious adverse events			
subjects affected / exposed	16 / 41 (39.02%)	7 / 33 (21.21%)	
number of deaths (all causes)	1	1	
number of deaths resulting from adverse events	0	0	
Vascular disorders			
Hypertension			
subjects affected / exposed	2 / 41 (4.88%)	5 / 33 (15.15%)	
occurrences causally related to treatment / all	0 / 2	0 / 5	
deaths causally related to treatment / all	0 / 0	0 / 0	
Surgical and medical procedures			
Hospitalization			
subjects affected / exposed	1 / 41 (2.44%)	0 / 33 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Pleurodesis			
subjects affected / exposed	1 / 41 (2.44%)	0 / 33 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
General disorders and administration site conditions			
Performance status decreased			

subjects affected / exposed	1 / 41 (2.44%)	0 / 33 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
General physical health deterioration			
subjects affected / exposed	1 / 41 (2.44%)	2 / 33 (6.06%)	
occurrences causally related to treatment / all	0 / 2	0 / 2	
deaths causally related to treatment / all	0 / 0	0 / 0	
Respiratory, thoracic and mediastinal disorders			
Cough			
subjects affected / exposed	1 / 41 (2.44%)	1 / 33 (3.03%)	
occurrences causally related to treatment / all	0 / 1	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Bronchopneumopathy			
subjects affected / exposed	0 / 41 (0.00%)	1 / 33 (3.03%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Restrictive pulmonary disease			
subjects affected / exposed	1 / 41 (2.44%)	0 / 33 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Respiratory failure			
subjects affected / exposed	1 / 41 (2.44%)	0 / 33 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Pneumothorax			
subjects affected / exposed	0 / 41 (0.00%)	1 / 33 (3.03%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Dyspnea

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
22 January 2019	Protocol containing amendment n°1
16 September 2019	Protocol containing amendment n°2
24 August 2020	Protocol containing amendment n°4
13 January 2021	Protocol containing amendment n°5
25 June 2021	Protocol containing amendment n°6
07 December 2021	Protocol containing amendment n°7

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Single-arm nature, small sample size, use of archival tissue for translational research , and a minority of patients with BRCA mutation status in both populations. The study was not powered to show statistical differences in these subgroups.
