

Clinical trial results:

A multi-center, open label, single group, observational study to investigate the effects of training on the administration of Cardioplexol (TM)

Summary

EudraCT number	2018-002311-10
Trial protocol	AT DE
Global end of trial date	18 October 2021

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	18 October 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	18 October 2021
Global end of trial reached?	Yes
Global end of trial date	18 October 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective is to explore the effects of a training program on the rate of correct application of Cardioplexol (TM) for cardioplegic cardiac arrest during cardiac surgical interventions.

Protection of trial subjects:

The study was performed in accordance with the ethical principles that have their origins in the Declaration of Helsinki. The planning and conduct of this clinical study followed the respective national laws of the participating country (competent authorities) and the principles and guidelines for Good Clinical Practice (GCP), Good Laboratory Practices (GLP) and Good Pharmacovigilance Practice (GVP).

Background therapy:

None

Evidence for comparator:

Not applicable. The main objective of this study was to explore the effects of a training program on the rate of correct application of Cardioplexol (TM) for cardioplegic cardiac arrest during cardiac surgical interventions. Hence, no comparator was used.

Actual start date of recruitment	19 November 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Austria: 107
Country: Number of subjects enrolled	Germany: 33
Country: Number of subjects enrolled	Switzerland: 31
Worldwide total number of subjects	171
EEA total number of subjects	140

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	72
From 65 to 84 years	99
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 29 surgeons and 171 patients were recruited over a period of approx. 3 years in Austria, Germany and Switzerland. Every patient who was a candidate for an elective surgical cardiac procedure was included in this study, provided the operation was being performed via a full or hemi sternotomy and under cardiac arrest and assistance of ECC.

Pre-assignment

Screening details:

A total of 25 surgeons was planned to be trained, accounting for a minimum of 150 patients to be operated in the study, including 50 patients in total in part I (i.e. 2 patients per surgeon), and 100 patients in total in part II (i.e. 4 patients per surgeon). The actual number of surgeons was 29, and a total of 171 patients were screened.

Period 1

Period 1 title	Overall Trial Period
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Observational group
Arm description: -	
Arm type	Observational
Investigational medicinal product name	Cardioplexol
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for cardioplegia
Routes of administration	Intracardiac use

Dosage and administration details:

Administration of one single dose (100 ml) of Cardioplexol (TM). Further dose of Cardioplexol (TM) was applied in regular intervals depending on the duration of the cardiac surgery as well as individual factors.

Number of subjects in period 1	Observational group
Started	171
signed informed consent	171
Completed	157
Not completed	14
Screen failure	14

Period 2

Period 2 title	Overall Trial Period _Treated patients
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Observational group
------------------	---------------------

Arm description:

All operated patients.

Part I: Training Program: The training program was addressed to all cardiac surgeons and cardiotechnicians willing to operate patients in this study, and included one theoretical and one practical section. A total of 29 surgeons were recruited and 28 had successfully operated 2 patients each. One surgeon did not qualify to participate in part II of the study as he only operated one patient in part I. Hence, he was replaced by another surgeon by mutual agreement. During the training phase 57 patients were operated.

Part II: Evaluation Part: A total of 28 surgeons participated in this phase and operated 100 patients using Cardioplexol. Parameters regarding the correct administration (primary efficacy endpoint) were collected during the surgical procedure. Secondary endpoints were mainly collected during the first 24 hours following myocardial reperfusion (i.e. after aortic unclamping). A second safety follow-up visit was performed 30 days after surgery.

Primary: Number of major deviations from the application of Cardioplexol as determined by the pre-specified training procedure

End point title	Number of major deviations from the application of Cardioplexol as determined by the pre-specified training procedure ^[1]
End point description: The primary endpoint of the study was the number of major deviations from the application of Cardioplexol as determined by the pre-specified training procedure (incorrect volume of initial dose, incorrect volume of second/third/fourth dose, incorrect duration of injection of initial dose, incorrect timing of application of initial dose, incorrect timing of application of second/third/fourth dose). The primary endpoint for each patient was considered to be fulfilled only if the application of Cardioplexol was correct in all of the following points: correct volume of initial dose, correct volume of second/third/fourth dose, correct duration of injection of initial dose, correct timing of application of initial dose, correct timing of application of second/third/fourth dose or if a detailed explanation by the surgeon was given why she/he deviated from the pre-specified training procedures.	
End point type	Primary

End point timeframe:

The variables of the primary endpoint (timing and volumes of initial, second, third and fourth doses of Cardioplexol) were documented in an intraoperative worksheet during surgery-visit.

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The primary endpoint for the AS was analyzed by using the SAS FREQ Procedure with a two-sided 95% Clopper-Pearson (exact) confidence limits. No major deviation from the application of Cardioplexol as determined by the pre-specified training procedure was observed and the (95% (Clopper-Pearson (Exact)) confidence interval was [0.964; 1.000]. The performed training of surgeons, who had never used Cardioplexol before, resulted in a correct application of Cardioplexol in all 100 patients of the AS.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All adverse events (AEs) after signature of the informed consent form were recorded irrespective of whether or not they may be related to the study intervention. Investigators followed-up AEs until resolution or the end of the study (follow up visit)

Adverse event reporting additional description:

At each assessment, all AEs either observed by the Investigator or one of his clinical collaborators or reported by the patient spontaneously or in response to a direct question were evaluated by the Investigator. Nature of each event, date and time (where appropriate) of onset, outcome, severity and relationship to administration were established.

Reporting groups

Reporting group title	Overall (Safety Set (SS))
-----------------------	---------------------------

Reporting group description:

The safety set (SS) consisted of a total of 157 patients who were operated using Cardioplexol, of whom 156 patients (99.4%) experienced at least 1 AE starting on or after the day of study drug application (treatment emergent adverse event, TEAE). In general, there were 678 treatment emergent adverse events reported (i.e. all AEs which started after or on the same day as surgery).

Serious adverse events	Overall (Safety Set (SS))

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
03 April 2019	<p>Due to the request of the competent authority in Germany (BfArM) several amendments were done for the previous study protocol.</p> <p>Exclusion criteria 11: Exclusion criteria updated to define anticoagulatory drugs more precisely</p> <p>Footnote 6: Specification of safety laboratory parameters added</p> <p>Footnote 7: More precise information on time windows were added</p> <p>Footnote 8: More precise information on time windows were added</p> <p>Footnote 9: Sponsor added this footnote to specify parameters more clearly</p> <p>Footnote 10: Sponsor added this footnote to specify parameters more clearly</p> <p>Footnote 11: More precise information on time windows were added</p> <p>Footnote 12: Sponsor added this footnote to specify parameters more clearly</p> <p>7.7 Safety related criteria for patient's discontinuation include (but are not limited to): Safety related criteria for discontinuation were added</p> <p>7.8 Any anticoagulant and any other auxiliary medicinal product: Updated to be more precise regarding anticoagulatory drugs</p> <p>8.4 Premature termination or temporarily suspension: Detailed description of discontinuation criteria added</p> <p>10.9 The end of the study is defined as the date of the last visit last subject (LVLS): Exact specification of end of study was added</p>
20 January 2020	<p>Page 9 & 24: Inclusion Criterion 3: The operation will be carried out via a full or a hemi sternotomy, under cardiac arrest and under the assistance of a heart lung machine;</p> <p>Page 21: The purpose of this study is to evaluate a training program addressed to all cardiac surgeons and cardiotechnicians who are unexperienced with the use of the cardioplegic solution Cardioplexol when operating patients via a full or a hemi sternotomy and who are willing to operate with Cardioplexol (TM) and aiming at increasing the efficacy of Cardioplexol (TM) administration while reducing the risk of false manipulations.</p> <p>Due to ongoing discussions with the participating investigators, it was realized that the wording of inclusion criterion 3 "The operation can be carried out via a full sternotomy, under cardiac arrest and under the assistance of a heart lung machine", Study Protocol, version 3.0 dated 03.04.2019, might lead to two different interpretations by the investigators. To harmonise the protocol and for better understanding inclusion criterion N°3 was updated. The update is also reflected I the objectives. The respective text can be found in the list of inclusion criteria on pages 9 and 24 of the study protocol, and further in the text on pages 21 and 24.</p>

17 March 2021	<p>Page 21: 1.3.4. Risks In the IB, contraindications for the use of the product are stated. These provisions were integrated in the clinical trial protocol according to the request of the authorities Swissmedic to have harmonized information in the two documents.</p> <p>Page 24-25: 3.1 Training Program It is described more in detail how the training of the surgeons is managed by the sponsor, as recommended by the Swiss Ethical Committee "Kantonale Ethikkommission Zürich".</p> <p>Page 30: 6.2 Storage conditions In the QIMP it is indicated that after mixing, the reconstituted solution has been shown to be stable for 6 hours at 5°C. The shelf-life of the reconstituted solution is determined as 6 hours. This information was integrated in the Protocol according to the request of the authorities Swissmedic to harmonize the information of the two documents.</p> <p>Page 39 & 40 Chapter 8.2.1 Reporting of SAEs and AEs: 2nd and 3rd paragraphs: It is clarified that the SAE reporting obligations of the investigator should be fulfilled "without delay" as noted by the authorities BfArM and demanded in GCP-V §12 (4).</p> <p>Page 43-44: 3 new Sections 8.5, 8.6., 8.7 added in Chapter 8 "Safety Reporting For the sake of completeness and clarification, as recommended by the Swiss Ethical Committee "Kantonale Ethikkommission Zürich", a detailed description is given which Adverse Events are reported to Competent authorities and Ethics committees (8.5). It is also described which other safety reportings are performed (8.6 and 8.7). It is clarified that these obligations should be fulfilled "without delay" as noted by the authorities BfArM demanded in GCP-V §12 and §13 (8.5 and 8.7). Additionally, all addressees for immediate safety and protective measures are mentioned, as noted by the authorities BfArM.</p> <p>Page 46 Chapter 10.1 "Research Ethics Committee and Regulatory Compliance" : For the sake of completeness, an explanation is given in which international register the clinical study is registered.</p>
