Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	22 November 2024
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	22 November 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main purpose of Part 1 of the study was to determine the dose of atezolizumab given as subcutaneous (SC) injection that was predicted to yield drug exposure that is comparable to that of atezolizumab intravenous (IV) infusion. The main purpose of Part 2 of the study was to demonstrate non-inferiority of exposure to atezolizumab SC compared with atezolizumab IV.

Protection of trial subjects:

All participants were required to sign the informed consent form (ICF).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 December 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 7
Country: Number of subjects enrolled	Brazil: 22
Country: Number of subjects enrolled	Chile: 50
Country: Number of subjects enrolled	China: 10
Country: Number of subjects enrolled	Costa Rica: 8
Country: Number of subjects enrolled	France: 7
Country: Number of subjects enrolled	Greece: 9
Country: Number of subjects enrolled	Guatemala: 7
Country: Number of subjects enrolled	Hungary: 7
Country: Number of subjects enrolled	Italy: 2
Country: Number of subjects enrolled	Korea, Republic of: 5
Country: Number of subjects enrolled	Latvia: 13

Country: Number of subjects enrolled	South Africa: 3
Country: Number of subjects enrolled	Spain: 37
Country: Number of subjects enrolled	Thailand: 69

Country: Number of subjects enrolled	Türkiye: 54
Country: Number of subjects enrolled	Ukraine: 28
Country: Number of subjects enrolled	United Kingdom: 2
Worldwide total number of subjects	438
EEA total number of subjects	86

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	229
From 65 to 84 years	207
85 years and over	2

Subject disposition

Recruitment

Recruitment details:

A total of 438 participants with previously treated locally advanced or metastatic non-small cell lung cancer (NSCLC) who were cancer immunotherapy (CIT)-naïve and for whom prior platinum-based therapy failed took part in the study across 23 countries from 27 December 2018 to 22 November 2024.

Pre-assignment

Screening details:

The study had 2 parts: Part 1 (Dose Finding) & Part 2 (Dose Confirmation). Participants received atezolizumab (co-mixed with recombinant human hyaluronidase [rHuPH20]) SC & IV in Part 1 & atezolizumab (co-formulated with rHuPH20) SC/IV in Part 2. The study is considered "Completed" as all the pre-planned study activities & analyses were performed.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

Open-label study, with allocation for Part 1 being non-randomized, whereas for Part 2 it is randomized.

Arms

Are arms mutually exclusive?	Yes
Arm title	Part 1 Cohort 1: Atezolizumab SC Co-mix 1800 mg

Arm description:

Participants received atezolizumab, 1800 milligrams (mg), co-mixed with rHuPH20, as SC injection on Cycle 1 Day 1 (1 cycle=21 days), followed by atezolizumab, 1200 mg, as an IV infusion, every 3 weeks (Q3W) on Day 1 of subsequent cycles (1 cycle=21 days) until disease progression (PD), loss of clinical benefit, unacceptable toxicity, or withdrawal of consent.

Arm type	Experimental
Investigational medicinal product name	Atezolizumab
Investigational medicinal product code	RO5541267
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Atezolizumab, 1200 mg, as an IV infusion, Q3W (1 cycle=21 days).

Investigational medicinal product name	Atezolizumab
Investigational medicinal product code	RO5541267/F01
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Atezolizumab, 1800 mg, co-mixed with rHuPH20, as SC injection on Cycle 1 Day 1 (1 cycle=21 days).

Arm title	Part 1 Cohort 2: Atezolizumab SC Co-mix 1200 mg
------------------	---

Arm description:

Participants received atezolizumab, 1200 mg, co-mixed with rHuPH20, as SC injection, Q2W, on Day 1 of the first 3 cycles (Cycle 1-3=14 days), followed by atezolizumab, 1200 mg, as an IV infusion, Q3W, on Day 1 of subsequent cycles (1 cycle=21 days) until PD, loss of clinical benefit, unacceptable toxicity, or withdrawal of consent.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Atezolizumab

End points

End points reporting groups

Reporting group title	Part 1 Cohort 1: Atezolizumab SC Co-mix 1800 mg
Reporting group description: Participants received atezolizumab, 1800 milligrams (mg), co-mixed with rHuPH20, as SC injection on Cycle 1 Day 1 (1 cycle=21 days), followed by atezolizumab, 1200 mg, as an IV infusion, every 3 weeks (Q3W) on Day 1 of subsequent cycles (1 cycle=21 days) until disease progression (PD), loss of clinical benefit, unacceptable toxicity, or withdrawal of consent.	
Reporting group title	Part 1 Cohort 2: Atezolizumab SC Co-mix 1200 mg
Reporting group description: Participants received atezolizumab, 1200 mg, co-mixed with rHuPH20, as SC injection, Q2W, on Day 1 of the first 3 cycles (Cycle 1-3=14 days), followed by atezolizumab, 1200 mg, as an IV infusion, Q3W, on Day 1 of subsequent cycles (1 cycle=21 days) until PD, loss of clinical benefit, unacceptable toxicity, or withdrawal of consent.	
Reporting group title	Part 1 Cohort 3: Atezolizumab SC Co-mix 1800 mg
Reporting group description: Participants received atezolizumab, 1800 mg, co-mixed with rHuPH20, as SC injection, Q3W, on Day 1 of first 3 cycles, followed by atezolizumab, 1200 mg, as an IV infusion, Q3W on Day 1 for subsequent cycles (1 cycle=21 days) until PD, loss of clinical benefit, unacceptable toxicity, or withdrawal of consent.	
Reporting group title	Part 2: Atezolizumab IV 1200 mg
Reporting group description: Participants received atezolizumab, 1200 mg, as an IV infusion, Q3W, on Day 1 of each cycle (1 cycle=21 days) until PD, loss of clinical benefit, or unacceptable toxicity.	
Reporting group title	Part 2: Atezolizumab SC 1875 mg
Reporting group description: Participants received atezolizumab, 1875 mg, co-formulated with rHuPH20, as SC injection, on Day 1 of each cycle (1 cycle=21 days) until PD, loss of clinical benefit, or unacceptable toxicity.	
Subject analysis set title	Part 2: Atezolizumab IV/Atezolizumab SC
Subject analysis set type	Per protocol
Subject analysis set description: Participants received atezolizumab, 1200 mg, as an IV infusion, Q3W, or atezolizumab, 1875 mg, co-formulated with rHuPH20, as SC injection, on Day 1 of each cycle (1 cycle=21 days) until PD, loss of clinical benefit, or unacceptable toxicity. HCPs who administered the IV or SC formulations completed the HCP SC versus IV Perspective Questionnaire and the HCP SC Perspective Questionnaire.	

Primary: Part 1: Serum Trough Concentration (Ctrough) of Atezolizumab at Cycle 1

End point title	Part 1: Serum Trough Concentration (Ctrough) of Atezolizumab at Cycle 1 ^{[1][2]}
End point description: Pharmacokinetic (PK)-evaluable population included all participants who received at least one dose of atezolizumab and had at least 1 evaluable post dose PK sample that could affect PK results. Number analyzed is the number of participants with data available for analysis.	
End point type	Primary
End point timeframe: Pre-dose on Day 1 of Cycle 2 (Cycle length =21 days for cohorts 1 and 3 and 14 days for cohort 2)	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analysis for this endpoint.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: No statistical analysis for this endpoint.

End point values	Part 1 Cohort 1: Atezolizumab SC Co-mix 1800 mg	Part 1 Cohort 2: Atezolizumab SC Co-mix 1200 mg	Part 1 Cohort 3: Atezolizumab SC Co-mix 1800 mg	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	13	15	35	
Units: micrograms per milliliter (µg/mL)				
geometric mean (geometric coefficient of variation)	121 (± 42.8)	77.5 (± 51.4)	78.3 (± 88.6)	

Statistical analyses

No statistical analyses for this end point

Primary: Part 2: Observed Serum Ctrough of Atezolizumab at Cycle 1

End point title	Part 2: Observed Serum Ctrough of Atezolizumab at Cycle 1 ^[3]
-----------------	--

End point description:

Per Protocol PK evaluable population included all participants randomized to the atezolizumab SC and atezolizumab IV treatment arms who did not have protocol deviations that could affect Cycle 1 observed Ctrough results.

End point type	Primary
----------------	---------

End point timeframe:

Predose on Day 1 of Cycle 2 (Cycle length =21 days)

Notes:

[3] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: No statistical analysis for this endpoint.

End point values	Part 2: Atezolizumab IV 1200 mg	Part 2: Atezolizumab SC 1875 mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	97	205		
Units: µg/mL				
geometric mean (geometric coefficient of variation)	85.4 (± 34.1)	89.4 (± 127.1)		

Statistical analyses

Statistical analysis title	Analysis of Co-primary Endpoint Ctrough
Comparison groups	Part 2: Atezolizumab IV 1200 mg v Part 2: Atezolizumab SC 1875 mg
Number of subjects included in analysis	302
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[4]
Parameter estimate	Geometric mean ratio
Point estimate	1.05

Confidence interval	
level	90 %
sides	2-sided
lower limit	0.88
upper limit	1.24

Notes:

[4] - The null hypothesis that atezolizumab SC is inferior to atezolizumab IV is rejected if the lower bound of the 2-sided 90% confidence interval [CI] of the geometric mean ratio is greater than or equal to (\geq) the non-inferiority margin 0.8.

Primary: Part 2: Area Under the Concentration-Time Curve from Time Zero to 21 Days (AUC 0-21 d) at Cycle 1

End point title	Part 2: Area Under the Concentration-Time Curve from Time Zero to 21 Days (AUC 0-21 d) at Cycle 1 ^[5]
-----------------	--

End point description:

PK-evaluable population included all participants who received at least one dose of atezolizumab and had at least 1 evaluable post dose PK sample that could affect PK results. Number analyzed is the number of participants with data available for analysis.

End point type	Primary
----------------	---------

End point timeframe:

From start of dosing up to Day 21 in Cycle 1 (Cycle length = 21 days)

Notes:

[5] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: No statistical analysis for this endpoint.

Secondary: Part 1: Percentage of Participants with Adverse Events (AEs)

End point title	Part 1: Percentage of Participants with Adverse Events (AEs) ^[11]
-----------------	--

End point description:

An AE was any untoward medical occurrence in a participant administered a pharmaceutical product and which does not necessarily have to have a causal relationship with the treatment. An AE can therefore be any unfavorable and unintended sign (including an abnormal laboratory finding, for example), symptom, or disease temporally associated with the use of a pharmaceutical product, whether or not considered related to the pharmaceutical product. Preexisting conditions which worsen during a study are also considered as AEs. AEs were reported based on the National Cancer Institute Common Terminology Criteria for AEs, version 5.0 (NCI-CTCAE, v5.0). Safety-evaluable population included all participants who received at least one dose of atezolizumab (IV or SC), with participants grouped according to treatment received. Percentages have been rounded to one decimal place.

Secondary: Part 2: Objective Response Rate (ORR)

End point title	Part 2: Objective Response Rate (ORR) ^[16]
-----------------	---

End point description:

ORR was defined as the percentage of participants having a complete response (CR) or partial response (PR) as determined by investigator assessment of radiographic disease per Response Evaluation Criteria in Solid Tumors Version 1.1 (RECIST V1.1). CR was defined as the disappearance of all target lesions and any pathological lymph nodes must have reduction in short axis to < 10 millimeters (mm). PR was defined as at least a 30% decrease in the sum of diameters (SOD) of all target lesions, taking as reference the baseline SOD in the absence of CR. Response-evaluable population included all participants with measurable disease at baseline. Percentage of participants who achieved confirmed objective response (CR or PR) have been reported. Percentages have been rounded to one decimal place.

EORTC IL57 questionnaire has 10 items and covers 3 scales: PF, RF and GHS/QoL and 1 item from EORTC IL. RF scale has 2 items evaluating extent to which participants are limited in doing work and pursuing leisure activities in the previous week. Questions are answered on a 4-point Likert scale (where 1="Not at all" to 4="Very much") for the role functioning scale. For this scale, mean of the items are linearly transformed to obtain scores from 0-100, where 100 = best possible score. Higher score indicates better outcome. FAS included all randomized participants, with participants grouped according to their assigned treatment. Number analyzed is the number of participants with data available for analysis. n = number of participants with data available for analysis at the specified time point. 9999 = No participants were analyzed at the specified time point. 99999 = SD was not estimable for since only 1 participant was evaluated.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline, Day 1 of Cycles 2, 3, 4, 5, 6, 8, 10, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 34, 36, 38, 40, 42, 44, 46, 48, 50, 52, 54, 56, 58, 60, 62, 64 (Cycle length = 21 days), and Treatment Discontinuation Visit (up to approximately 44 months)

Notes:

[21] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: No statistical analysis for this endpoint.

Secondary: Part 2: Change From Baseline in EORTC IL57 Global Health Status Score

End point title	Part 2: Change From Baseline in EORTC IL57 Global Health Status Score ^[22]
-----------------	---

End point description:

EORTC IL57 questionnaire has 10 items and covers 3 scales: PF, RF and GHS/QoL and 1 item from EORTC IL. GHS/QoL scale has 2 items evaluating participants' overall health and QoL in previous week. Questions are answered on a 7-point scale (where 1="Very poor" to 7="Excellent") for GHS/QoL. For this scale, mean of the items are linearly transformed to obtain scores from 0-100, where 100 = best possible score. Higher score indicates better outcome. FAS included all randomized participants, with participants grouped according to their assigned treatment. Number analyzed is the number of participants with data available for analysis. n = number of participants with data available for analysis at the specified time point. 9999 = No participants were analyzed at the specified time point. 99999 = SD was not estimable since only 1 participant was evaluated.

Secondary: Part 2: Overall Satisfaction with Treatment Over Time, Assessed by the Modified Satisfaction With Therapy (SWT) Scale of the Cancer Therapy Satisfaction Questionnaire (CTSQ)

End point title	Part 2: Overall Satisfaction with Treatment Over Time, Assessed by the Modified Satisfaction With Therapy (SWT)
-----------------	---

End point description:

Modified SWT scale of the CTSQ consisted of seven items that measured seven domains related to satisfaction with cancer therapy. These include worthwhile, difficulty, benefits, feelings about side effects, form of therapy, overall satisfaction, and if participants would choose the therapy taking everything into consideration. Each domain is rated on a 5-point scale, with 1 representing the worst response and 5 representing the best response, except in the case of one reverse-scored item. Mean of the items were linearly transformed to obtain scores from 0-100, where 100 was the best possible score. Higher scores indicate higher satisfaction. FAS included all randomized participants, with participants grouped according to their assigned treatment. Number analyzed is the number of participants with data available for analysis. n = number of participants with data available for analysis at the specified time point. Here, data for 'overall satisfaction' domain has been presented.

End point type	Secondary

Secondary: Part 2: Percentage of Participants With Ant-Drug Antibodies (ADAs) to Atezolizumab After SC or IV Administration

End point title	Part 2: Percentage of Participants With Ant-Drug Antibodies (ADAs) to Atezolizumab After SC or IV Administration ^[25]
-----------------	--

End point description:

The percentage of ADA-positive participants after atezolizumab administration was reported. Participants who received atezolizumab were considered to be treatment-emergent ADA-positive if they were ADA-negative or had missing data at baseline but developed an ADA response following atezolizumab exposure (treatment-induced ADA response), or if they were ADA-positive at baseline and the titer of one or more post-baseline samples was at least 0.60 titer units (t.u.) greater than the titer of the baseline sample (treatment-enhanced ADA response). Safety-evaluable population included all participants who received at least one dose of atezolizumab (IV or SC), with participants grouped according to treatment received. Number analyzed is the number of participants with data available for analysis. Percentages have been rounded to one decimal place.

End point type	Secondary
----------------	-----------

End point timeframe:

From Cycle 1 Day 1 (Cycle length = 21 days) up to treatment discontinuation visit (Up to approximately 20 months)

Notes:

[25] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: No statistical analysis for this endpoint.

End point values	Part 2: Atezolizumab IV 1200 mg	Part 2: Atezolizumab SC 1875 mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	112	228		
Units: percentage of participants

Secondary: Part 2: Percentage of Health Care Professionals (HCPs) by Their Response to Question 2 of HCP SC Versus IV Perspective Questionnaire

End point title	Part 2: Percentage of Health Care Professionals (HCPs) by Their Response to Question 2 of HCP SC Versus IV Perspective Questionnaire
-----------------	--

End point description:

The HCP SC versus IV Perspective Questionnaire consisted of five items evaluating the number of atezolizumab SC and IV administrations done, convenience, potential time savings, and overall satisfaction with atezolizumab SC and atezolizumab IV, as well as reasons for HCP-reported satisfaction or dissatisfaction. HCPs who administered at least three doses of atezolizumab as an IV infusion and as a SC injection across all participants in Part 2 of this study responded to this questionnaire, of which question 2 is being reported here: Question 2: Which formulation of atezolizumab (SC or IV) do you think is more convenient for you? Responses to this question are reported in the data table. HCPs were allowed to complete the questionnaire until the last participant completed their assessments (duration between the 'first participant in [FPI]' date to 'last participant last visit [LPLV]' for Part 2). Number analyzed included HCPs who completed Question 2 of the questionnaire.

End point type	Secondary
----------------	-----------

End point timeframe:

After HCP has completed administering at least 3 doses of atezolizumab SC and IV across all participants in Part 2 (Up to approximately 48 months)

End point values	Part 2: Atezolizumab IV/Atezolizumab SC			
Subject group type	Subject analysis set			
Number of subjects analysed	50			
Units: percentage of HCPs				
number (not applicable)				
Atezolizumab SC is much more convenient	24.0			
Atezolizumab SC is a little more convenient	16.0			
Both formulations are equally convenient	26.0			
Atezolizumab IV is a little more convenient	12.0			
Atezolizumab IV is much more convenient	22.0

Reporting groups

Reporting group title	Part 1 Cohort 1: Atezolizumab SC Co-mix 1800 mg
-----------------------	---

Reporting group description:

Participants received atezolizumab, 1800 mg, co-mixed with rHuPH20, as SC injection on Cycle 1 Day 1 (1 cycle=21 days), followed by atezolizumab, 1200 mg, as an IV infusion, Q3W on Day 1 of subsequent cycles until PD, loss of clinical benefit, unacceptable toxicity, or withdrawal of consent.

Reporting group title	Part 1 Cohort 2: Atezolizumab SC Co-mix 1200 mg
-----------------------	---

Reporting group description:

Participants received atezolizumab, 1200 mg, co-mixed with rHuPH20, as SC injection, Q2W, on Day 1 of the first 3 cycles (Cycle 1-3=14 days), followed by atezolizumab, 1200 mg, as an IV infusion, Q3W, on Day 1 of subsequent cycles (1 cycle=21 days) until PD, loss of clinical benefit, unacceptable toxicity, or withdrawal of consent.

Reporting group title	Part 1 Cohort 3: Atezolizumab SC Co-mix 1800 mg
-----------------------	---

Reporting group description:

Participants received atezolizumab, 1800 mg, co-mixed with rHuPH20, as SC injection, Q3W, on Day 1 of first 3 cycles, followed by atezolizumab, 1200 mg, as an IV infusion, Q3W on Day 1 for subsequent cycles (1 cycle=21 days) until PD, loss of clinical benefit, unacceptable toxicity, or withdrawal of consent.

Reporting group title	Part 2: Atezolizumab IV 1200 mg
-----------------------	---------------------------------

Reporting group description:

Participants received atezolizumab, 1200 mg, as an IV infusion, Q3W, on Day 1 of each cycle (1 cycle=21 days) until PD, loss of clinical benefit, or unacceptable toxicity.

Reporting group title	Part 2: Atezolizumab SC 1875 mg
-----------------------	---------------------------------

Reporting group description:

Participants received atezolizumab, 1875 mg, co-formulated with rHuPH20, as SC injection, on Day 1 of each cycle (1 cycle=21 days) until PD, loss of clinical benefit, or unacceptable toxicity.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 June 2019	Amendment v2: 1. Subcutaneous site of first drug administration for Cohort 3 was changed from thigh to abdomen to accommodate participant convenience, increased participant privacy, and possible administration of higher drug volume. 2. Study drug dosage for Cohort 3 was changed from 2400 mg Q4W to 1800 mg Q3W to assess the alternate administration site (abdomen). 3. Enrollment for Cohort 3 was increased to approximately 20-30 participants to provide enough participants who could be assessed for feasibility of abdominal administration.
30 March 2020	Amendment v3: No changes impacted study conduct.
28 August 2020	Amendment v4: 1. A randomized control arm comprising of participants treated with atezolizumab IV as per standard of care was added in Part 2 and enrollment was expanded to include an extension in China. 2. Investigational treatment in Part 2 was modified to atezolizumab monotherapy and inclusion criteria modified to include participants in whom platinum therapy had failed, to allow for assessment of atezolizumab SC without confounding factors associated with use in combination with chemotherapy. 3. Model-predicted area under the atezolizumab AUC at Cycle 1 (AUCcycle 1) was added as a key secondary endpoint. 4. Additional secondary PK objectives for Part 2 were added to evaluate exposure following administration of atezolizumab SC compared with atezolizumab IV. 5. Duration of response was added as an efficacy endpoint in Part 2. 6. Patient- and health care professional-reported experience assessments was added to Part 2 to provide a more comprehensive characterization of the SC formulation.
10 February 2021	Amendment v5: 1. A new co-primary PK endpoint was introduced (model-predicted AUC0-21d at Cycle 1). 2. Number of participants enrolled in Part 2 was increased to 327 to accommodate the new co-primary PK endpoint.
25 February 2022	Amendment v6: 1. Adverse event management guidelines were updated to align with the atezolizumab investigator's brochure, version 18. 2. References to an extended recruitment in China was removed. 3. Estimand language in Section 6.6.2 was corrected to match the definition of Per Protocol PK analysis population provided in Section 6.2.2. 4. Benefit-risk assessment and guidance on concomitant administration of severe acute respiratory syndrome coronavirus 2 vaccines with atezolizumab was added. 5. Responsibilities of the Principal Investigator and the role of the medical monitor in determining participant eligibility was clarified.
07 February 2023	Amendment v7: 1. The list of identified risks for atezolizumab was revised to include pericardial disorders. 2. The list of identified risks for atezolizumab was revised to include myelitis and facial paresis. 3. Hemophagocytic lymphohistiocytosis was updated from a potential risk to an identified risk associated with atezolizumab and language has been revised accordingly. 4. The list of adverse events of special interest (AESIs) was revised to include myelitis and facial paresis. 5. A description of the technical and organizational security measures taken to protect personal data was added to align with CTR requirements. 6. Appendix 8 was revised to indicate that caution should be used when considering atezolizumab for participants who have previously experienced a pericardial disorder while receiving another immunostimulatory anti-cancer agent.

18 March 2024	Amendment v8: 1. The list of approved indications for atezolizumab was updated to include alveolar soft part sarcoma. 2. The adverse event management guidelines were streamlined by removing standard of care information and restructured for consistency with regulatory guidelines and industry standards.
