

Clinical trial results:

A multi-center, randomized, placebo-controlled, double-blind, dose-finding clinical trial investigating the short-term relief of symptoms of acute pharyngitis such as throat soreness pain and difficulty to swallow by treatment with three different doses of MYRAMISTIN™ oromucosal spray

Summary

EudraCT number	2018-002543-28
Trial protocol	DE AT
Global end of trial date	31 December 2021

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	31 December 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	31 December 2021
Global end of trial reached?	Yes
Global end of trial date	31 December 2021
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To evaluate the short-term efficacy of different MyramistinTM doses (0.005%, 0.01% and 0.02%) compared to placebo in the symptomatic treatment of acute pharyngitis.

Protection of trial subjects:

This clinical trial was designed and was implemented and reported in accordance with the ICH Harmonized Tripartite Guidelines for Good Clinical Practice, with applicable local regulations (including applicable European Directives, AMG and GCP-V), and with the ethical principles laid down in the Declaration of Helsinki. Every patient was informed verbally and also in writing, with a patient information leaflet explaining the nature of the study, its objectives, the study medication and potential risks, the rights and obligations of the participant and the fact that he was free to withdraw his consent at any time without giving any reason. Details of indemnity and insurance were also stated. All questions about the trial were answered to the satisfaction of the patient. Women of child bearing potential had to be informed that taking the IMP may involve unknown risks to the fetus if pregnancy occurred during the clinical trial and agree that in order to participate in the clinical trial, they must adhere to the contraception requirement for the duration of the clinical trial. Prior to the participation in the trial, a written informed consent form had to be signed and personally dated by the subject and by the person who conducted the informed consent. The patient's information and informed consent form were available in the local language. The final trial protocol together with the patient information sheet, the informed consent form and the Investigator's drug brochure were submitted to the involved Ethics Committees and were constituted to fulfil regulatory laws. The study was approved by all Ethics Committees before clinical trial start.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	18 February 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 169
Worldwide total number of subjects	169
EEA total number of subjects	169

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	160
From 65 to 84 years	9
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

All patients were recruited in Germany in practices of general practitioners and specialists for ear nose and throat. Recruitment started in February 2020 and was interrupted from March 2020 until September 2020 due to COVID. After restart recruitment was very slow.

Pre-assignment

Screening details:

Screening and first study medication application was possible the same day. Only one screening failure was identified during the study, who did not fulfil inclusion criteria and was not randomised.

Period 1

Period 1 title	Overall period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Monitor, Data analyst, Subject

Blinding implementation details:

A randomisation list was created by an independent company containing the random numbers, code and treatment descriptions.

It was sorted by random number. Based on this list MoNo chem-pharm Produkte GmbH filled in the different doses in a white opaque spray, which is delivered in a white, neutral outer carton. The packaging and labeling of the IMP was done in accordance with the applicable regulatory requirements of each participating country and under the responsibility of MoNo.

Arms

Are arms mutually exclusive?	Yes
Arm title	Myramistin 0.005%

Arm description:

0.005% Myramistin oromucosal spray containing 0.05 mg myramistin per 1 ml
Unit dose amounts to 0.42 ml per application (3 puffs of 0.14 ml, administered to the back of the throat) in all treatment arms. Myramistin/Placebo is administered 3 times per day with a minimum of 4 hours between two subsequent doses. The total amount applied per day is 1.26 ml.

Arm type	Experimental
Investigational medicinal product name	Myramistin 0.005%
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oromucosal spray
Routes of administration	Oromucosal use

Dosage and administration details:

Myramistin™ spray was applied to the back of the throat 3 times a day for 3 days with a minimum of 4 hours between two subsequent doses. Each application consisted of 3 puffs and each puff delivered 0.14 ml (i.e., a total of 0.42 ml per application). The first application was done at the study centre, whereas the following applications were administered at home. In total, Myramistin™ was to be applied 9-10 times during the trial.

Arm title	Myramistin 0.01%
------------------	------------------

Arm description:

0.01% of Myramistin oromucosal spray containing 0.1 mg myramistin per 1 ml
Unit dose amounts to 0.42 ml per application (3 puffs of 0.14 ml, administered to the back of the throat) in all treatment arms. Myramisti/Placebo is administered 3 times per day with a minimum of 4 hours between two subsequent doses. The total amount applied per day is 1.26 ml.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Myramistin 0.01%
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oromucosal spray
Routes of administration	Oromucosal use

Dosage and administration details:

Myramistin™ spray was applied to the back of the throat 3 times a day for 3 days with a minimum of 4 hours between two subsequent doses. Each application consisted of 3 puffs and each puff delivered 0.14 ml (i.e., a total of 0.42 ml per application). The first application was done at the study centre, whereas the following applications were administered at home. In total, Myramistin™ was to be applied 9-10 times during the trial.

Arm title	Myramistin 0.02%
------------------	------------------

Arm description:

0.02% of Myramistin oromucosal spray containing 0.2 mg myramistin per 1 ml, Unit dose amounts to 0.42 ml per application (3 puffs of 0.14 ml, administered to the back of the throat) in all treatment arms. Myramistin/Placebo is administered 3 times per day with a minimum of 4 hours between two subsequent doses. The total amount applied per day is 1.26 ml.

Arm type	Experimental
Investigational medicinal product name	Myramistin 0.02%
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oromucosal spray
Routes of administration	Oromucosal use

Dosage and administration details:

Myramistin™ spray was applied to the back of the throat 3 times a day for 3 days with a minimum of 4 hours between two subsequent doses. Each application consisted of 3 puffs and each puff delivered 0.14 ml (i.e., a total of 0.42 ml per application). The first application was done at the study centre, whereas the following applications were administered at home. In total, Myramistin™ was to be applied 9-10 times during the trial.

Arm title	Placebo
------------------	---------

Arm description:

Placebo: matched control spray not containing myramistin. Unit dose amounts to 0.42 ml per application (3 puffs of 0.14 ml, administered to the back of the throat) in all treatment arms. Myramistin/Placebo is administered 3 times per day with a minimum of 4 hours between two subsequent doses. The total amount applied per day is 1.26 ml.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oromucosal spray
Routes of administration	Oromucosal use

Dosage and administration details:

Placebo spray was applied to the back of the throat 3 times a day for 3 days with a minimum of 4 hours between two subsequent doses. Each application consisted of 3 puffs and each puff delivered 0.14 ml (i.e., a total of 0.42 ml per application). The first application was done at the study centre, whereas the following applications were administered at home. In total, Myramistin™ was to be applied 9-10 times during the trial.

Subject analysis set description:

Primary and secondary efficacy endpoints were evaluated using the FAS, defined as all randomized patients who received at least one dose of study medication and had at least one post-treatment efficacy assessment.

Primary: Summarized pain intensity differences (SPID-2Pain)

End point title	Summarized pain intensity differences (SPID-2Pain)
-----------------	--

End point description:

The primary endpoint was SPID-2Pain, defined as pain intensity differences (PID) summarized over the time course of 2 hours after first application on Day 1 (Baseline). The sum was calculated over the time-weighted differences from each measured time point to Baseline using the 100 mm VAS Sore Throat Pain Intensity Scale (STPIS). The primary endpoint should show superiority of each of the individual active Myramistin doses (0.005%, 0.01% and 0.02%) versus Placebo.

End point type	Primary
----------------	---------

End point timeframe:

From baseline summarized over 2 hours (SPID-2Pain) after first IMP application.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From Visit 1 after signing informed consent onwards to Visit 4.

Adverse event reporting additional description:

After the first IMP application patients were handed out a diary, which they had to complete twice daily. All adverse events were collected there and also through questioning the patient at visit 2. Lab values and vital signs were measured at each visit. Adverse events were assessed by the respective investigators.

Assessment type	Systematic

Reporting groups

Reporting group title	Myramistin 0.005%
-----------------------	-------------------

Reporting group description:

Seventeen adverse events were reported in this group, but only one patient, in this group described feeling of drunkenness assessed as related to the IMP. This adverse event resolved within one day. All other events were assessed as not related. Two adverse events were graded as moderate all other events as mild.

Reporting group title	Myramistin 0.01%
-----------------------	------------------

Reporting group description:

Seven adverse events were reported in this group. Only one of the adverse events in this group was assessed as related to the IMP. The patient reported about paresthesia in the tongue. All adverse events were graded as mild.

Reporting group title	Myramistin 0.02%
-----------------------	------------------

Reporting group description:

None of the eight reported adverse events in this group was assessed to be related to the IMP. All adverse events were graded as mild.

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

In total 10 adverse events were reported in this group. All adverse events were graded as mild. One patient reported about odynophagia, which was assessed as related to the IMP.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 October 2020	A substantial amendment was submitted to EC for restart after COVID in September 2020 but due to EC request a negative COVID test had to be added to the inclusion criteria. Furthermore, the study end was prolonged until end of second quarter of 2021.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
23 March 2020	Due to the high risks identified that patients, study personal and other people might get infected due to study visits, and the fact that there are alternative treatments, including available over the counter, the risk to patients at the current time was assessed to be higher than the benefit of clinical trial participation. In addition, there were several governmental rules in place requiring people to not leave the home in order to reduce "social contacts". This general societal aspect were also taken into consideration.	07 December 2020

Notes:

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The results of the primary endpoint analysis indicate that Myramistin does not differentiate from placebo at any dose level. The same outcome was found for all secondary endpoints and all sensitivity analyses, and at all timepoints assessed.

Notes:
