Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 November 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	06 August 2020
Global end of trial reached?	Yes
Global end of trial date	02 September 2020
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To evaluate the efficacy of pamiparib in patients with metastatic castration-resistant prostate cancer (mCRPC) positive for circulating tumor cells (CTC) with homologous recombination deficiency (CTC-HRD-positive; per Epic Sciences assay), as per Prostate Cancer Clinical Trials Working Group [PCWG3] criteria.

Protection of trial subjects:

This trial was designed and monitored in accordance with Sponsor procedures, which comply with the ethical principles of GCP as required by the major regulatory authorities, and in accordance with the Declaration of Helsinki.

The IEC/IRB-approved ICF was signed and dated by the subject or the subject's legally authorized representative before his or her participation in the study. A copy of each signed ICF was provided to the subject or the subject's legally authorized representative. All signed and dated ICFs were retained in each patient's study file or in the site file. For any updated or revised ICFs, written informed consent was obtained using the IEC/IRB-approved updated/revised ICFs for continued participation in the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	05 February 2019
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy
Long term follow-up duration	2 Years
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 6
Country: Number of subjects enrolled	United States: 6
Country: Number of subjects enrolled	Spain: 1
Worldwide total number of subjects	13
EEA total number of subjects	1

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	4
From 65 to 84 years	9
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Eighteen subjects were screened; 5 subjects failed screening and 13 subjects were dosed.

Pre-assignment

Screening details:

All subjects enrolled had unknown BRCA1/2 status at study entry and were assigned to cohorts 1B or 2B; there were no subjects known to be BRCA1/2 positive at enrollment.

Period 1

Period 1 title	Overall (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Pamiparib
-----------	-----------

Arm description:

Participants received 60 mg pamiparib orally twice daily

Arm type	Experimental
Investigational medicinal product name	Pamiparib
Investigational medicinal product code	
Other name	BGB-290
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

60 mg pamiparib capsule orally twice daily

Number of subjects in period 1	Pamiparib
Started	13
Completed	0
Not completed	13
Physician decision	1
Death	7
Progressive Disease	2
Study terminated by sponsor	3

End points

End points reporting groups

Reporting group title	Pamiparib
Reporting group description:	
Participants received 60 mg pamiparib orally twice daily	

Primary: Objective Response Rate (ORR) Determined by Independent Central Review

End point title	Objective Response Rate (ORR) Determined by Independent Central Review ^[1]
-----------------	---

End point description:

ORR is the percentage of participants with a best objective response of complete response (CR) or partial response (PR) confirmed at a subsequent timepoint ≥ 4 weeks later by an Independent Review Committee (IRC). Efficacy-Evaluable Analysis Set: includes all participants in the Safety Analysis Set who had measurable disease at baseline and at least 1 post-baseline tumor assessment, unless they permanently discontinue pamiparib or the study early due to clinical progression or death before tumor assessment. Participants with available data were included in the analysis.

End point type	Primary
----------------	---------

End point timeframe:

Up to 1 year and 6 months

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: This study stopped prematurely and only 13 subjects enrolled. No summary statistics are available given the limited data from the small number of evaluable subjects.

End point values	Pamiparib			
Subject group type	Reporting group			
Number of subjects analysed	12			
Units: Percentage of participants				
number (not applicable)	0			

Statistical analyses

No statistical analyses for this end point

Primary: Prostate-Specific Antigen (PSA) Response Rate

End point title	Prostate-Specific Antigen (PSA) Response Rate ^[2]
-----------------	--

End point description:

PSA response rate is defined as the percentage of participants with PSA decline $\geq 50\%$ from baseline [confirmed by a second PSA value ≥ 3 weeks later] for CTC-HRD-positive patients with or without measurable disease. PSA-Evaluable Analysis Set: includes all participants in the Safety Analysis Set with ≥ 3 rising PSA levels with ≥ 1 week between determinations and screening PSA ≥ 2 $\mu\text{g/L}$ and who had at least 1 post-baseline PSA measurement unless they permanently discontinue pamiparib or the study early due to clinical progression or death before completed PSA assessment.

End point type	Primary
----------------	---------

End point timeframe:

Up to 1 year and 6 months

Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: This study stopped prematurely and only 13 subjects enrolled. No summary statistics are available given the limited data from the small number of evaluable subjects.

End point values	Pamiparib

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
16 October 2018	To incorporate additional changes based on feedback from the United States Food and Drug Administration (US FDA) To incorporate changes per BeiGene protocol template for better consistency across multiple studies Minor editorial and formatting changes have been made to enhance clarity and readability;

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
27 May 2020	Due to changes in standard of care for mCRPC, slow enrollment and lack of responses in this heavily pretreated patient population, the study was terminated.	-

Notes:

Limitations and caveats

None reported
