

Clinical trial results:

A Phase II Trial to Investigate Genetic Markers of Response to Pembrolizumab (MK-3475, SCH 900475) Combined with Chemotherapy as a First-line Treatment for Non-Small Cell Lung Cancer (KEYNOTE-782)

Summary

EudraCT number	2018-002598-22
Trial protocol	HU ES
Global end of trial date	05 November 2021

Results information

Result version number	v1 (current)
This version publication date	09 November 2022
First version publication date	09 November 2022

Trial information

Trial identification

Sponsor protocol code	3475-782

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	05 November 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	05 November 2021
Global end of trial reached?	Yes
Global end of trial date	05 November 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Participants with Stage IV nonsquamous non-small cell lung cancer (NSCLC) without prior systemic treatment will be treated with standard of care pembrolizumab combined with platinum-doublet chemotherapy for 4 cycles, then pembrolizumab plus pemetrexed maintenance for up to 31 additional cycles. The platinum doublet would be pemetrexed plus the investigator's choice of either cisplatin or carboplatin. The primary objective is to evaluate if total baseline tumor mutation burden (TMB) in cell-free circulating tumor deoxyribonucleic acid (ctDNA) is predictive of objective response per Response Evaluation Criteria in Solid Tumors Version 1.1 (RECIST 1.1) by the investigator by estimating the level of association.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	30 October 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 5
Country: Number of subjects enrolled	Hungary: 35
Country: Number of subjects enrolled	Israel: 15
Country: Number of subjects enrolled	Spain: 58
Country: Number of subjects enrolled	United States: 5
Worldwide total number of subjects	118
EEA total number of subjects	93

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	60
From 65 to 84 years	57
85 years and over	1

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Participants were screened in 5 countries for this study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Pembrolizumab plus platinum-doublet chemotherapy
------------------	--

Arm description:

Participants received pembrolizumab 200 mg intravenous (IV) infusion every 3 weeks (Q3W) on the first day of each 21-day cycle combined with a platinum-doublet of pemetrexed 500 mg/m² IV infusion plus investigators choice of either carboplatin AUC 5 mg/mL/m or cisplatin 75 mg/m² IV Q3W for up to 4 cycles, then pembrolizumab 200 mg plus pemetrexed 500 mg/m² IV infusion for up to 31 additional cycles up to ~2 years.

Arm type	Experimental
Investigational medicinal product name	Pembrolizumab
Investigational medicinal product code	
Other name	MK-3475
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

200 mg, Day 1 of each 21-day cycle (Q3W)

Investigational medicinal product name	Pemetrexed
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

500 mg/m² every 3 weeks

Investigational medicinal product name	Carboplatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

AUC 5 mg/mL/min, Day 1 of each 21-day cycle for 4 cycles (Cycles 1 – 4). Investigator's choice of either cisplatin or carboplatin.

Investigational medicinal product name	Cisplatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

75 mg/m², Day 1 of each 21-day cycle for 4 cycles (Cycles 1 – 4). Investigator's choice of either cisplatin or carboplatin.

Number of subjects in period 1	Pembrolizumab plus platinum-doublet chemotherapy
Started	118
Treated	117
Completed	0
Not completed	118
Consent withdrawn by subject	2
Death	80
Lost to follow-up	2
Follow-up discontinued by sponsor	34

Subject analysis set title	Pembrolizumab plus platinum-doublet chemotherapy overall
----------------------------	--

Subject analysis set type	Sub-group analysis
---------------------------	--------------------

Subject analysis set description:

Participants received pembrolizumab 200 mg intravenous (IV) infusion every 3 weeks (Q3W) on the first day of each 21-day cycle combined with a platinum-doublet of pemetrexed 500 mg/m² IV infusion plus investigators choice of either carboplatin AUC 5 mg/mL/m or cisplatin 75 mg/m² IV Q3W for up to 4 cycles, then pembrolizumab 200 mg plus pemetrexed 500 mg/m² IV infusion for up to 31 additional cycles up to ~2 years. This analysis set includes all responders and non-responders who received at least one dose of study intervention and had samples evaluable for ctDNA TMB analysis.

Subject analysis set title	Pembrolizumab plus platinum-doublet chemotherapy responder
----------------------------	--

Subject analysis set type	Sub-group analysis
---------------------------	--------------------

Subject analysis set description:

Participants received pembrolizumab 200 mg intravenous (IV) infusion every 3 weeks (Q3W) on the first day of each 21-day cycle combined with a platinum-doublet of pemetrexed 500 mg/m² IV infusion plus investigators choice of either carboplatin AUC 5 mg/mL/m or cisplatin 75 mg/m² IV Q3W for up to 4 cycles, then pembrolizumab 200 mg plus pemetrexed 500 mg/m² IV infusion for up to 31 additional cycles up to ~2 years. Participants in this analysis set were considered responders if they had a complete or partial response. This analysis set is a subset of the overall arm and includes only responders who received at least one dose of study intervention and had samples evaluable for ctDNA TMB analysis.

Subject analysis set title	Pembrolizumab plus platinum-doublet chemotherapy non-responder
----------------------------	--

Subject analysis set type	Sub-group analysis
---------------------------	--------------------

Subject analysis set description:

Participants received pembrolizumab 200 mg intravenous (IV) infusion every 3 weeks (Q3W) on the first day of each 21-day cycle combined with a platinum-doublet of pemetrexed 500 mg/m² IV infusion plus investigators choice of either carboplatin AUC 5 mg/mL/m or cisplatin 75 mg/m² IV Q3W for up to 4 cycles, then pembrolizumab 200 mg plus pemetrexed 500 mg/m² IV infusion for up to 31 additional cycles up to ~2 years. Participants were considered non-responders if they did not have complete or partial response. This analysis set is a subset of the overall arm and includes only non-responders who received at least one dose of study intervention and had samples evaluable for ctDNA TMB analysis.

Primary: Objective Response Rate

End point title	Objective Response Rate ^[1]
-----------------	--

End point description:

Objective response rate is the proportion of participants who have a confirmed complete response (CR) or partial response (PR). Objective response rate is assessed by investigator review according to Response Evaluation Criteria in Solid Tumors (RECIST) 1.1. Complete Response (CR): Disappearance of all target lesions. Any pathological lymph nodes (whether target or non-target) must have reduction in short axis to <10 mm. Partial Response (PR): At least a 30% decrease in the sum of diameters of target lesions, taking as reference the baseline sum diameters. The analysis population consisted of all participants who received at least one dose of study intervention. The percentage of participants with an ORR is presented.

End point type	Primary
----------------	---------

End point timeframe:

Up to ~25 months

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analysis was planned for this endpoint.

End point values	Pembrolizumab plus platinum-doublet chemotherapy			
Subject group type	Reporting group			
Number of subjects analysed	117			
Units: Percentage of Participants				
number (confidence interval 95%)	40.2 (31.2 to 49.6)			

Statistical analyses

No statistical analyses for this end point

Primary: Tumor mutation burden (TMB) in cell-free circulating tumor deoxyribonucleic acid (ctDNA)

End point title	Tumor mutation burden (TMB) in cell-free circulating tumor deoxyribonucleic acid (ctDNA) ^[2]
-----------------	---

End point description:

Cell-free ctDNA allows the exploration of tumor features from blood samples. TMB is a measure of mutational load in tumor cells and expressed as the number of somatic mutations per megabase (Mut/MB) of DNA. Participants with missing data are considered non-responders. The analysis population consisted of all participants who received at least one dose of study intervention and had samples evaluable for ctDNA TMB analysis. The mean TMB in cell-free ctDNA of participants is presented.

End point type	Primary
----------------	---------

End point timeframe:

Baseline (Day 1)

Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analysis was planned for this endpoint.

Secondary: Progression Free Survival (PFS)

End point title	Progression Free Survival (PFS)
-----------------	---------------------------------

End point description:

PFS is defined as the time from enrollment to the first documented disease progression or death due to any cause, whichever occurs first as assessed by investigator review according to Response Evaluation Criteria in Solid Tumors (RECIST 1.1). The analysis population consisted of all participants who received at least one dose of study intervention. The Kaplan-Meier estimate of median PFS using the product-limit (Kaplan-Meier) method for censored data is presented.

End point type	Secondary
----------------	-----------

End point timeframe:

Up to ~36 months

End point values	Pembrolizumab plus platinum-doublet chemotherapy			
Subject group type	Reporting group			
Number of subjects analysed	117			
Units: Months				
median (confidence interval 95%)	7.2 (5.6 to 9.8)			

Statistical analyses

No statistical analyses for this end point

Secondary: Overall Survival

End point title	Overall Survival
-----------------	------------------

End point description:

OS is defined as the time from the start of treatment to death due to any cause. The analysis population consisted of all participants who received at least one dose of study intervention. The Kaplan-Meier estimate of median PFS using the product-limit (Kaplan-Meier) method for censored data is presented.

number (not applicable)	38.5			

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

For All-Cause Mortality: from allocation up to ~36 months. For AEs from start of treatment up to ~31 months.

Adverse event reporting additional description:

All-cause mortality: All allocated participants. AEs: All allocated participants who received at least 1 dose of study intervention. Per protocol, MedDRA preferred terms "Neoplasm progression", "Malignant neoplasm progression" and "Disease progression" not related to study drug are excluded as AEs.

Assessment type	Systematic

Vomiting			

subjects affected / exposed occurrences (all)	22 / 117 (18.80%) 27		
Skin and subcutaneous tissue disorders Pruritus subjects affected / exposed occurrences (all)	6 / 117 (5.13%) 8		
Rash subjects affected / exposed occurrences (all)	7 / 117 (5.98%) 13		
Renal and urinary disorders Renal impairment subjects affected / exposed occurrences (all)	9 / 117 (7.69%) 10		
Endocrine disorders Hypothyroidism subjects affected / exposed occurrences (all)	14 / 117 (11.97%) 17		
Hyperthyroidism subjects affected / exposed occurrences (all)	7 / 117 (5.98%) 8		
Musculoskeletal and connective tissue disorders Myalgia subjects affected / exposed occurrences (all)	6 / 117 (5.13%) 8		
Arthralgia subjects affected / exposed occurrences (all)	16 / 117 (13.68%) 22		
Back pain subjects affected / exposed occurrences (all)	12 / 117 (10.26%) 13		
Infections and infestations Pneumonia subjects affected / exposed occurrences (all)	7 / 117 (5.98%) 7		
Urinary tract infection			

subjects affected / exposed occurrences (all)	13 / 117 (11.11%) 19		
Metabolism and nutrition disorders			
Decreased appetite			
subjects affected / exposed	25 / 117 (21.37%)		
occurrences (all)	26		
Hyperglycaemia			
subjects affected / exposed	21 / 117 (17.95%)		
occurrences (all)	25		
Hypokalaemia			
subjects affected / exposed	8 / 117 (6.84%)		
occurrences (all)	9		
Hypomagnesaemia			
subjects affected / exposed	6 / 117 (5.13%)		
occurrences (all)	7		
Hypophosphataemia			
subjects affected / exposed	6 / 117 (5.13%)		
occurrences (all)	9		
Hyponatraemia			
subjects affected / exposed	9 / 117 (7.69%)		
occurrences (all)	10		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 May 2019	Amendment one includes direction for re-consenting participants upon disease progression, moving the collection time point of one of the primary endpoint samples, and correcting errors in the Schedule of Activities.
30 September 2021	Amendment two includes instruction that allows participants to be enrolled in a pembrolizumab extension study upon study completion, add final analysis in the statistical analysis plan, and update the Sponsor's branding information.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
