

## Clinical trial results:

### Highdose steroids in High Pain Responders undergoing total knee-arthroplasty - A randomized doubleblindet controlled trial.

#### Summary

EudraCT number	2018-002635-23
Trial protocol	DK
Global end of trial date	01 March 2021

#### Results information

Result version number	v1 (current)
This version publication date	23 September 2022
First version publication date	23 September 2022
Summary attachment (see zip file)	Journal article, BJA 2021 (1-s2.0-S0007091221006255-main (2).pdf)

#### Trial information

##### Trial identification

Sponsor protocol code	NBF_HK_02_2018.
-----------------------	-----------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT03763734
WHO universal trial number (UTN)	-

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

---

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 January 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	11 January 2021
Global end of trial reached?	Yes
Global end of trial date	01 March 2021
Was the trial ended prematurely?	No

Notes:

---

## General information about the trial

Main objective of the trial:

To investigate the effect of high dose steroids on the amount of patients with VAS >30 in a 5-meter walktest, 24 hours postoperatively after total kneearthroplasty in a High Pain responder cohort.

Protection of trial subjects:

All patients had standardized care, surgery and treatments as part of a Fast-track surgery regimen in Total Knee Arthroplasty surgery, and both study-treatment-groups had active treatment (standard-dose vs. higher dose).

Background therapy:

Multimodal opioid-sparring analgesia including Cox-2 inhibitors, acetaminophen(paracetamol) and rescue opioids (morphine or oxycodone).

All patients had pre- and postoperative tranexamic acid, Local Infiltration Analgesia applied by the surgeon perioperatively, postoperative compression bandage.

Perioperative antibiotic regimen of i.v. dicloxacillin 2 g at start of surgery and repeated if body weight >80 kg or if length of surgery >2 h. Dicloxacillin was repeated as 1 g tablet 8 h after end of surgery. Cefuroxim in case of allergy.

Thromboprophylaxis was used in-hospital only (xarelto or eliquis).

All patients had neuraxial anesthesia with bupivacaine.

Evidence for comparator:

The use of steroids as a perioperative mean of reducing postoperative stress and hence reducing postoperative pain is well-known, and several articles exist on the topic.

Actual start date of recruitment	03 December 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Denmark: 88
Worldwide total number of subjects	88
EEA total number of subjects	88

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	25
From 65 to 84 years	62
85 years and over	1

## Subject disposition

### Recruitment

#### Recruitment details:

Patients were recruited before surgery at their information meeting. All participants had had oral and written project information in accordance with guidelines and had at least 24 hours of consideration. All participants gave informed consent. Patients were screened at Hvidovre Hospital and Vejle sygehus from January 2019 to August 2020.

### Pre-assignment

#### Screening details:

From February 13, 2019 to August 26, 2020, a total of 1037 patients planned for knee arthroplasty were assessed for inclusion in accordance to inclusion and exclusion criteria. 25% of screened patients were eligible and 88 patients were included and randomised.

### Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

#### Blinding implementation details:

Randomisation sequence were made by unblinded physicians not otherwise connected to the study or the participants with double-control.

Study-specific trained unblinded nurses at each site, not having any contact with the participants were responsible for preparing the study-drug and blinding this for all other personnel.

Study-drug was mixed into a blinded 100 ml. container, and intervention and control were alike in both volume and appearance.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Intervention (High dose, HD)

#### Arm description:

Intervention arm, High dose Dexamethasone 1mg/kg of patient's actual bodyweight.

Arm type	Experimental
Investigational medicinal product name	Dexamethasone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous drip use

#### Dosage and administration details:

Dexamethasone 10mg/ml, added to a 100 ml. NaCl container in accordance to the patient's actual weight, thus the intervention dose was 1mg/kg.

Infusion initiated after application of neuraxial anesthesia and administered within 10-15 minutes.

<b>Arm title</b>	Control (standard/intermediate dose (ID))
------------------	---

#### Arm description:

Intermediate dose dexamethasone 0.3mg/kg of actual bodyweight

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	Dexamethasone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous drip use

Dosage and administration details:

Dexamethasone 10mg/ml, added to a 100 ml. NaCl container in accordance to the patient's actual weight, thus the intervention dose was 0.3mg/kg.

Infusion initiated after application of neuraxial anesthesia and administered within 10-15 minutes.

Number of subjects in period 1	Intervention (High dose, HD)	Control (standard/intermediate dose (ID)
Started	44	44
Completed	42	42
Not completed	2	2
excluded due to change of surgery/anesthesia	2	2

## Baseline characteristics

### Reporting groups

Reporting group title	Intervention (High dose, HD)
Reporting group description:	
Intervention arm, High dose Dexamethasone 1mg/kg of patient's actual bodyweight.	
Reporting group title	Control (standard/intermediate dose (ID))
Reporting group description:	
Intermediate dose dexamethasone 0.3mg/kg of actual bodyweight	

Reporting group values	Intervention (High dose, HD)	Control (standard/intermediate dose (ID))	Total
Number of subjects	44	44	88
Age categorical			
Units: Subjects			
In utero			0
Preterm newborn infants (gestational age < 37 wks)			0
Newborns (0-27 days)			0
Infants and toddlers (28 days-23 months)			0
Children (2-11 years)			0
Adolescents (12-17 years)			0
Adults (18-64 years)			0
From 65-84 years			0
85 years and over			0
Age continuous			
Age			
Units: years			
median	70	70	
full range (min-max)	50 to 86	50 to 82	-
Gender categorical			
Sex (n/n)			
Units: Subjects			
Female	16	16	32
Male	28	28	56
ASA-score			
ASA-score American Society of Anesthesiologist score of morbidity and physical status. Range I-VI (1-6) ranging from I: Healthy patient to VI: Brain-dead patient awaiting organ-donation.			
Units: Subjects			
Score I	7	7	14
Score II	20	31	51
Score III	17	6	23

## End points

### End points reporting groups

Reporting group title	Intervention (High dose, HD)
Reporting group description: Intervention arm, High dose Dexamethasone 1mg/kg of patient's actual bodyweight.	
Reporting group title	Control (standard/intermediate dose (ID))
Reporting group description: Intermediate dose dexamethasone 0.3mg/kg of actual bodyweight	

### Primary: Primary Outcome: Percentage of patients experiencing VAS>30mm on a 0-100 mm. VAS scale 24 hours after surgery upon ambulation

End point title	Primary Outcome: Percentage of patients experiencing VAS>30mm on a 0-100 mm. VAS scale 24 hours after surgery upon ambulation
End point description: Percentage of patients experiencing VAS>30mm on a 0-100 mm VAS scale 24 hours after surgery upon ambulation in a 5 meter walk test.	
End point type	Primary
End point timeframe: 24 hours after knee replacement surgery (a timeframe of 1 hour before and after precise timepoint of end of surgery).	

End point values	Intervention (High dose, HD)	Control (standard/inter mediate dose (ID))		
Subject group type	Reporting group	Reporting group

Method	Wilcoxon (Mann-Whitney)

## Adverse events

### Adverse events information<sup>[1]</sup>

Timeframe for reporting adverse events:

Serious adverse events were reported on day 0, 1, 2, 7, 30 or 90, or when alerted via our electronic patient record-system, and all SAE were reported within 24h of alert to the Sponsor.

Adverse event reporting additional description:

Only Serious adverse events were recorded and reported in accordance with the approval of the Danish medicines agency and local ethics committee, as Dexamethasone is a broadly used and well-approved drug.

If adverse events (not serious adverse events) were reported or suspected of occurring in more than 5% of patients, the sponsor was informed.

Assessment type	Systematic

### Reporting groups

Reporting group title	Intervention (High dose, HD)
-----------------------	------------------------------

Reporting group description:

Intervention arm, High dose Dexamethasone 1mg/kg of patient's actual bodyweight.

Reporting group title	Control (standard/intermediate dose (ID))
-----------------------	---

Reporting group description:

Intermediate dose dexamethasone 0.3mg/kg of actual bodyweight

Notes:

[1] - There are no non-serious adverse events recorded for these results. It is expected that there will be at least one non-serious adverse event reported.

Justification: No non-serious adverse events were reported, as specified in the protocol and agreed upon by the Local ethics committee and relevant authorities(DKMA)

Serious adverse events	Intervention (High dose, HD)	Control (standard/intermediate dose (ID))	
Total subjects affected by serious adverse events			
subjects affected / exposed	3 / 42 (7.14%)	2 / 42 (4.76%)	
number of deaths (all causes)	0	0	
number of deaths resulting from adverse events	0	0	
Surgical and medical procedures			
Patellar dislocation	Additional description: Patellar dislocation needing revision surgery		
subjects affected / exposed	0 / 42 (0.00%)	1 / 42 (2.38%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Infections and infestations			
Infection	Additional description: Skin-infection, deep wound infection needing further antibiotics or Prosthetic joint infection needing revision		
subjects affected / exposed	3 / 42 (7.14%)	1 / 42 (2.38%)	
occurrences causally related to treatment / all	2 / 3	1 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	

Frequency threshold for reporting non-serious adverse events: 5 %

<b>Non-serious adverse events</b>	Intervention (High dose, HD)	Control (standard/intermediate dose (ID))	
Total subjects affected by non-serious adverse events			
subjects affected / exposed	0 / 42 (0.00%)	0 / 42 (0.00%)	

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

---

### Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
17 March 2020	Elective surgery was shut down due to the global Covid crisis.	02 June 2020

Notes:

### Limitations and caveats

None reported
