Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	03 August 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	23 December 2019
Global end of trial reached?	Yes
Global end of trial date	31 August 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Out-of-hospital cardiac arrest (OHCA) patients remaining comatose after resuscitation are at high risk of morbidity and mortality due to the post cardiac arrest syndrome (PCAS). Systemic inflammation is a major component of PCAS, and interleukin-6 (IL-6) levels are associated with severity of PCAS. Therefore, tocilizumab, which is an IL-6 receptor antagonist, could potentially dampen inflammation after OHCA.

The objective of the present trial was to determine the efficacy of tocilizumab to reduce systemic inflammation after OHCA of presumed cardiac cause and thereby potentially mitigate organ injury.

The primary endpoint of the study was difference in CRP response between the tocilizumab and placebo group during initial 72 hours.

Secondary endpoints included markers of inflammation, organ injury, neurologic outcome, safety and survival.

For a comprehensive presentation and discussion of trial results please see:

<https://doi.org/10.1161/CIRCULATIONAHA.120.053318>

Protection of trial subjects:

Participation in the trial did not limit the access to any additional treatments and patients were treated according to standard of care as well (described below). Co-participation in other trials was allowed as well.

Patients with know contraindications to treatment with the study drug (tocilizumab) were excluded during screening. Exclusion criteria included previous allergic reactions to tocilizumab, significant liver impairment, and significant infection as there is a potential immunosuppressive effect of tocilizumab. Further, all patients participating in the trial were treated with prophylactic antibiotics to possibly limit the occurrence of infections during the initial ICU stay.

Background therapy:

In addition to the trial associated treatment, all patients received "standard of care" including sedation, ventilation and targeted temperature management for at least 24 hours, as well as vasopressors/inotropy as needed. Further all patients received prophylactic antibiotics.

Evidence for comparator:

Isotonic saline was chosen as placebo treatment, and no significant effect of this was expected.

Actual start date of recruitment	04 March 2019
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy, Scientific research
Long term follow-up duration	6 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Denmark: 80
--------------------------------------	-------------

Worldwide total number of subjects	80
EEA total number of subjects	80

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	41
From 65 to 84 years	39
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Recruitment was completed in 9 months (ahead of schedule)

Pre-assignment

Screening details:

Brief inclusion criteria: Adult comatose patients resuscitated from OHCA of presumed cardiac cause.

We screened 117 patients and randomized 85 patients - tocilizumab: 42, placebo: 43; 5 patients were excluded prior to analysis (tocilizumab: 3; placebo: 2).

Data in this report refer to the resulting modified intention-to-treat population of 80.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Monitor, Data analyst, Carer, Assessor, Subject

Arms

Are arms mutually exclusive?	Yes
Arm title	Tocilizumab
Arm description: -	
Arm type	Experimental
Investigational medicinal product name	Tocilizumab
Investigational medicinal product code	
Other name	RoActemra, Actemra
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Patients allocated to the tocilizumab group received a 1-h infusion of 8 mg tocilizumab per kilogram body weight (maximum dose 800 mg, i.e. 40 mL of concentrate); the study drug was suspended in normal saline to a total volume of 100 mL.

Arm title	Placebo
Arm description: -	
Arm type	Placebo
Investigational medicinal product name	Saline
Investigational medicinal product code	
Other name	Isotonic saline, NaCl
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Patients allocated to the placebo arm received a 1-h infusion of 100 mL of normal saline.
