

## Clinical trial results:

### A Phase 2, Randomized, Double-blind, Placebo-controlled Study of Cemdisiran in Adult Patients with IgA Nephropathy

#### Summary

EudraCT number	2018-002716-27
Trial protocol	GB SE ES
Global end of trial date	27 June 2023

#### Results information

Result version number	v1 (current)
This version publication date	12 July 2024
First version publication date	12 July 2024

#### Trial information

##### Trial identification

Sponsor protocol code	ALN-CC5-005
-----------------------	-------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT03841448
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Alnylam Pharmaceuticals Inc.
Sponsor organisation address	675 W Kendall St, Cambridge, United States, 02142
Public contact	Clinical Trial Information Line, Alnylam Pharmaceuticals Inc, +1 8772569526, clinicaltrials@alnylam.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 June 2023
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	27 June 2023
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

The purpose of this study is to evaluate the effect of cemdisiran on proteinuria in adults with immunoglobulin A nephropathy (IgAN), who excrete >1 gram (gm) of protein per day despite standard of care, which includes treatment with angiotensin-converting enzyme (ACE) inhibitors or angiotensin receptor blockers (ARB). These participants are at high risk for progression of kidney disease, which can result in end-stage renal failure.

Protection of trial subjects:

This study was conducted in accordance with the protocol, all applicable regulatory requirements, and the guidelines of Good Clinical Practice (GCP). Compliance with GCP provides public assurance that the rights, safety, and well-being of study patients are protected consistent with the principles that have their origin in the Declaration of Helsinki.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	30 September 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 5
Country: Number of subjects enrolled	Sweden: 2
Country: Number of subjects enrolled	United Kingdom: 2
Country: Number of subjects enrolled	France: 3
Country: Number of subjects enrolled	Canada: 6
Country: Number of subjects enrolled	Malaysia: 8
Country: Number of subjects enrolled	Philippines: 3
Country: Number of subjects enrolled	Singapore: 1
Country: Number of subjects enrolled	Taiwan: 1
Worldwide total number of subjects	31
EEA total number of subjects	10

Notes:

### Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	31
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Participants were enrolled in the study at 19 investigative centers in Canada, France, Malaysia, Philippines, Singapore, Spain, Sweden, Taiwan, and the United Kingdom from 30 Sept 2019 to 27 June 2023.

### Pre-assignment

Screening details:

A total of 31 participants were enrolled in this study to receive cemdisiran or placebo. This study has two parts: Double Blind Treatment (DBT) Period and Open-Label Extension (OLE) Period.

### Period 1

Period 1 title	Double Blind Treatment Period
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Carer, Subject

Blinding implementation details:

During the DB Treatment Period participants were randomized in a 2:1 ratio to receive 600 mg of SC cemdisiran or SC placebo every 4 weeks in combination with standard of care.

Modified Intent-to-treat (mITT) Analysis Set included all participants who received any amount of study drug and had at least one post baseline 24-hour urine protein/creatinine ratio (UPCR) assessment.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	DBT Period: Placebo

Arm description:

Participants received cemdisiran matching placebo, subcutaneous (SC) injection, once every 4 weeks (Q4W) in combination with standard of care treatment up to a maximum of 38 weeks in the DBT period.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Injection , Subcutaneous use

Dosage and administration details:

Placebo was administered by SC injection.

<b>Arm title</b>	DBT Period: Cemdisiran
------------------	------------------------

Arm description:

Participants received cemdisiran, 600 milligrams (mg), SC injection, Q4W in combination with standard of care treatment up to a maximum of 38 weeks in the DBT period.

Arm type	Experimental
Investigational medicinal product name	Cemdisiran
Investigational medicinal product code	
Other name	ALN-CC5
Pharmaceutical forms	Solution for injection
Routes of administration	Injection , Subcutaneous use

Dosage and administration details:

Cemdisiran 600 mg was administered by SC injection.

<b>Number of subjects in period 1</b>	DBT Period: Placebo	DBT Period: Cemdisiran
Started	9	22
Modified ITT (mITT) Analysis Set	9	22
Completed	8	21
Not completed	1	1
Death	1	1

## Period 2

Period 2 title	Open-Label Extension Period
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

Participants who were randomized to receive placebo and cemdisiran the DBT period started receiving cemdisiran, 600 mg, SC injection, Q4W in combination with standard of care treatment up to a maximum of 88 weeks in the OLE treatment period.

## Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	DBT Period: Placebo to OLE Period: Cemdisiran

Arm description:

Participants who were randomized to receive cemdisiran matching placebo in the DBT period started receiving cemdisiran, 600 mg, SC injection, Q4W in combination with standard of care treatment up to a maximum of 88 weeks in the OLE treatment period.

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Injection , Subcutaneous use

Dosage and administration details:

Placebo was administered by SC injection.

Investigational medicinal product name	Cemdisiran
Investigational medicinal product code	
Other name	ALN-CC5
Pharmaceutical forms	Solution for injection
Routes of administration	Injection , Subcutaneous use

Dosage and administration details:

Cemdisiran 600 mg was administered by SC injection.

<b>Arm title</b>	DBT Period: Cemdisiran to OLE Period: Cemdisiran
------------------	--

Arm description:

Participants who were randomized to receive cemdisiran in the DBT period continued receiving cemdisiran, 600 mg, SC injection, Q4W in combination with standard of care treatment up to a maximum of 88 weeks in the OLE treatment period.

Arm type	Experimental
Investigational medicinal product name	Cemdisiran
Investigational medicinal product code	
Other name	ALN-CC5
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use, Injection

Dosage and administration details:

Cemdisiran 600 mg was administered by SC injection.

<b>Number of subjects in period 2<sup>[1]</sup></b>	DBT Period: Placebo to OLE Period: Cemdisiran	DBT Period: Cemdisiran to OLE Period: Cemdisiran
Started	8	20
Completed	0	0
Not completed	8	20
Physician decision	1	3
Adverse event, non-fatal	1	2
Death	-	1
Other Reason not Specified	2	5
Study Terminated by Sponsor	4	9

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: One participant in the DBT Period: Cemdisiran to OLE Period: Cemdisiran arm completed the DB Treatment Period but did not start the OLE Period.

## Baseline characteristics

### Reporting groups

Reporting group title	DBT Period: Placebo
Reporting group description:	
Participants received cemdisiran matching placebo, subcutaneous (SC) injection, once every 4 weeks (Q4W) in combination with standard of care treatment up to a maximum of 38 weeks in the DBT period.	
Reporting group title	DBT Period: Cemdisiran
Reporting group description:	
Participants received cemdisiran, 600 milligrams (mg), SC injection, Q4W in combination with standard of care treatment up to a maximum of 38 weeks in the DBT period.	

Reporting group values	DBT Period: Placebo	DBT Period: Cemdisiran	Total
Number of subjects	9	22	31
Age categorical			
Units: Subjects			
Adults (18-64 years)	9	22	31
Age continuous			
Units: years			
arithmetic mean	37.6	40.5	
standard deviation	± 10.4	± 10.1	-
Gender categorical			
Units: Subjects			
Female	6	9	15
Male	3	13	16
Ethnicity (NIH/OMB)			
Units: Subjects			
Hispanic or Latino	1	3	4
Not Hispanic or Latino	7	18	25
Unknown or Not Reported	1	1	2
Race/Ethnicity, Customized			
Units: Subjects			
Asian	4	12	16
White	4	8	12
Other	0	1	1
Not reported	1	1	2
Urine Protein to Creatinine Ratio (UPCR)			
Units: g/g			
arithmetic mean	1.972	1.554	
standard deviation	± 0.815	± 1.032	-

## End points

### End points reporting groups

Reporting group title	DBT Period: Placebo
Reporting group description: Participants received cemdisiran matching placebo, subcutaneous (SC) injection, once every 4 weeks (Q4W) in combination with standard of care treatment up to a maximum of 38 weeks in the DBT period.	
Reporting group title	DBT Period: Cemdisiran
Reporting group description: Participants received cemdisiran, 600 milligrams (mg), SC injection, Q4W in combination with standard of care treatment up to a maximum of 38 weeks in the DBT period.	
Reporting group title	DBT Period: Placebo to OLE Period: Cemdisiran
Reporting group description: Participants who were randomized to receive cemdisiran matching placebo in the DBT period started receiving cemdisiran, 600 mg, SC injection, Q4W in combination with standard of care treatment up to a maximum of 88 weeks in the OLE treatment period.	
Reporting group title	DBT Period: Cemdisiran to OLE Period: Cemdisiran
Reporting group description: Participants who were randomized to receive cemdisiran in the DBT period continued receiving cemdisiran, 600 mg, SC injection, Q4W in combination with standard of care treatment up to a maximum of 88 weeks in the OLE treatment period.	
Subject analysis set title	DBT Period: Cemdisiran to OLE Period: Cemdisiran
Subject analysis set type	Sub-group analysis
Subject analysis set description: Participants who were randomized to receive cemdisiran in the DBT period continued receiving cemdisiran, 600 mg, SC injection, Q4W in combination with standard of care treatment up to a maximum of 88 weeks in the OLE treatment period. The data reported for this group is for the DBT and OLE Periods inclusively, in which all participants were receiving treatment with cemdisiran.	
Subject analysis set title	All Cemdisiran
Subject analysis set type	Sub-group analysis
Subject analysis set description: All participants who received at least one dose of cemdisiran, including participants who received cemdisiran during the DB Period and participants who first received placebo during the DB Period and switched to cemdisiran during the OLE Period.	

### Primary: Percent Change From Baseline in UPCR as Measured in 24-hour Urine at Week 32

End point title	Percent Change From Baseline in UPCR as Measured in 24-hour Urine at Week 32
End point description: UPCR is a way of assessing the amount of protein in the urine. The primary analysis for UPCR was performed using Mixed-Effect Model Repeated Measures (MMRM) approach. Geometric mean (GM) ratios were obtained by exponentially back-transforming the arithmetic mean of change in log-transformed 24h UPCR. Standard error of the mean (SEM) was calculated as exponential (mean of change in log-transformed data) * (standard error of change in log-transformed data). Adjusted GM ratio to baseline and 90% confidence interval (CIs) were calculated by exponentially back-transforming the model-based least square (LS) mean and the corresponding 90% CI.	
End point type	Primary
End point timeframe: Baseline to Week 32	

End point values	DBT Period: Placebo	DBT Period: Cemdisiran		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	9 <sup>[1]</sup>	22 <sup>[2]</sup>

lower limit	-60.951
upper limit	0.46

## Secondary: Percent Change From Baseline in 24-hour Proteinuria at Week 32

End point title	Percent Change From Baseline in 24-hour Proteinuria at Week 32
End point description: Proteinuria is high levels of protein in the urine. 24-hour proteinuria assessment included 24-hour urine collections to assess total protein excretion per 24 hours. Analysis was performed using the MMRM model. GM ratios were obtained by exponentially back-transforming the arithmetic mean of change in log-transformed 24h urine protein (UP). SEM was calculated as exp (mean of change in log-transformed data) *(standard error of change in log-transformed data). Adjusted GM ratio to baseline and 90% CIs are calculated by exponentially back-transforming the model-based LS Means and the corresponding 90% CI.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
26 November 2018	Amendment 1: The main purpose of this protocol amendment was to incorporate changes requested by a Health Authority.
20 September 2019	Amendment 2: The primary purpose for this protocol amendment was to incorporate changes previously made to a regional protocol amendment into the global protocol.
27 April 2020	Amendment 3: The purpose of this protocol amendment was to incorporate Urgent Safety Measures (USMs) that were communicated to investigators in a Dear Investigator Letter (DIL) dated 06 April 2020.
19 January 2021	Amendment 4: The primary purpose for this protocol amendment was to extend the open-label extension (OLE) period by an additional 2 years.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
27 June 2023	The study was terminated early having identified clinically meaningful magnitude of proteinuria reduction due to cemdisiran (study goal). Participants completed DBT period and were in OLE period. Sponsor had no concerns with safety and integrity of participants	-

Notes:

### Limitations and caveats

None reported
