

Clinical trial results:

Phase 1/2 study to assess the safety and pharmacokinetics of subcutaneous injection of OCTA101 in previously treated adult patients with severe hemophilia A

Summary

EudraCT number	2018-002776-40
Trial protocol	BG
Global end of trial date	18 February 2022

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	12 August 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	18 February 2022
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objective is to assess the safety of various doses of OCTA101 after subcutaneous (sc) injection.

Protection of trial subjects:

This trial was conducted in accordance to the principles of ICH- GCP E6 (R2), ensuring that the rights, safety and well-being of patients are protected and in consistency with the Declaration of Helsinki and with applicable regulatory requirements. Inclusion and exclusion criteria were carefully defined in order to protect subjects from contraindications, interactions with other medication and risk factors associated with the investigational medicinal product. For each subject safety was assessed throughout the study duration, such as monitoring of AEs, SAEs and recording of concomitant medication.

Safety data and study progress were reviewed quite frequently by an Independent Data Monitoring Committee. The decision of going to the next higher dose was to taken after each cohort by an external independent DMC after review of safety and tolerability data, FVIII:C plasma levels, and PK characteristics of FVIII:C and von Willebrand Factor fragment dimer. Any safety-relevant signals were also forwarded to the DMC for their review as they occurred.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	03 July 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Bulgaria: 36
Worldwide total number of subjects	36
EEA total number of subjects	36

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	35
From 65 to 84 years	1
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Male patients aged ≥ 18 years with severe haemophilia A ($<1\%$ FVIII:C) as documented in medical records and having had ≥ 150 exposure days (EDs) with a FVIII product were screened according to predefined in- and exclusion criteria.

Period 1

Period 1 title	Overall Trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort 1: OCTA101 50 IU/kg sc

Arm description:

Single-period investigation with a single sc dose of 50 IU/kg OCTA101 profiled up to 72 hours after dosing (abdomen or thigh) Following review of safety and tolerability data by Data Monitoring Committee a daily prophylactic dosing (40-60 IU/kg) for 3 months. Patients received prophylactic Nuwiq for home treatment until the IDMC had confirmed that OCTA101 could be used as daily prophylaxis.

At the end of the 3-month daily prophylactic period PK assessment was performed with 50 IU/kg OCTA101 (abdomen).

Arm type	Experimental
Investigational medicinal product name	OCTA101 (human-cl rhFVIII and recombinant human von Willebrand Factor fragment dimer)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solution for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Single dose of OCTA101 50 IU/kg sc was administered by sc injection into the abdomen or thigh. Following review of safety and tolerability data by Data Monitoring Committee a daily prophylactic dosing (40-60 IU/kg) for 3 months.

Arm title	Cohort 2 : OCTA101 100 IU/kg sc
------------------	---------------------------------

Arm description:

Single-period investigation with a single sc dose of 100 IU/kg OCTA101 profiled up to 96 hours after dosing (abdomen or thigh) followed by a daily prophylactic dosing (40-60 IU/kg) for 3 months. At the end of the 3-month daily prophylactic period PK assessment was to be performed with 50 IU/kg OCTA101 (abdomen).

4 patients completed the initial PK assessment, but only 2 completed the 3-month daily sc treatment period. Only 1 patient completed the repeat PK assessment. The two inhibitor patients as well as one patient whose FVIII levels were very low did not do the repeat PK assessment.

Arm type	Experimental
Investigational medicinal product name	OCTA101 (human-cl rhFVIII and recombinant human von Willebrand Factor fragment dimer)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solution for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Single dose of OCTA101 100 IU/kg sc was administered by sc injection into the abdomen or thigh.

Following review of safety and tolerability data by Data Monitoring Committee a daily prophylactic dosing (40-60 IU/kg) for 3 months.

Arm title	Cohort 3: Nuwiq 50 IU/kg iv followed by OCTA101 50 IU/kg sc
------------------	---

Arm description:

Two-period investigation of a single iv dose of 50 IU/kg Nuwiq profiled for up to 72 hours after dosing followed by sc dose of 50 IU/kg OCTA101 administered into the abdomen profiled up to 72 hours.

Treatments were to be administered in fixed sequence, with Nuwiq first.

Following completion of the PK assessments in Cohort 3 and 1-month into OCTA101 daily prophylaxis in this cohort, the study was put on hold due to inhibitor development in a second patient (in Cohort 2). 8 patients completed the PK assessment but 0 completed the 3-month daily sc treatment period.

Arm type	Experimental
Investigational medicinal product name	OCTA101 (human-cl rhFVIII and recombinant human von Willebrand Factor fragment dimer)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solution for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Single dose of OCTA101 50 IU/kg sc was administered by sc injection into the abdomen.

Investigational medicinal product name	Nuwiq
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solution for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Nuwiq was to be injected iv once for PK evaluation at a dose of 50 IU/kg.

Arm title	Cohort 5: OCTA101 20, 40 and 60 IU/kg sc
------------------	--

Arm description:

Three-period investigation of single sc doses of 20, 40, and 60 IU/kg OCTA101 profiled up to 72 hours after dosing, respectively. Treatments were to be administered in fixed dose-ascending sequence (each in the abdomen).

Arm type	Experimental
Investigational medicinal product name	OCTA101 (human-cl rhFVIII and recombinant human von Willebrand Factor fragment dimer)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solution for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Each patient first received a single dose of 20 IU/kg sc (with 72 hours of observation), followed by a single dose of 40 IU/kg sc (with 72 hours of observation), followed by a single dose of 60 IU/kg sc (with 72 hours of observation) in the abdomen.

Arm title	Cohort 6: Nuwiq iv prophylaxis, OCTA101 sc daily
------------------	--

Arm description:

Following an initial 4-6-week run-in period with Nuwiq iv prophylaxis, 6-month prophylactic treatment with 12.5 IU/kg OCTA101 sc daily, then 25 IU/kg OCTA101 sc, and then depending on the overall data of the first 2 dose levels, 40 IU/kg OCTA101 sc could be considered (exact dosing depends on vial strength). Site of administration (abdomen or thigh) to be chosen by the patient. The study was stopped prematurely during the 12.5 IU/kg OCTA101 sc daily.

16 patients entered the Nuwiq iv run-in and 10 patients went on to receive OCTA101 12.5 IU/kg. The study was terminated before treatment could be completed.

Arm type	Experimental
Investigational medicinal product name	Nuwiq
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solution for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Nuwiq administered for prophylaxis in a 4 to 6-week run-in period.

Investigational medicinal product name	OCTA101 (human-cl rhFVIII and recombinant human von Willebrand Factor fragment dimer)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solution for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Planned as 6-month prophylactic treatment with 12.5 IU/kg OCTA101 sc daily, then 25 IU/kg OCTA101 sc, and then depending on the overall data of the first 2 dose levels, 40 IU/kg OCTA101 sc could be considered (exact dosing depends on vial strength). Site of administration (abdomen or thigh) to be chosen by the patient. The study was stopped prematurely during the 12.5 IU/kg.

Primary: Thromboembolic Events

End point title	Thromboembolic Events ^[3]
-----------------	--------------------------------------

End point description:

The definition of the cluster thromboembolic events was based on the standardised MedDRA query (SMQ) "Embolic and thrombotic events":

Definition: Thrombotic disorders are diseases characterized by formation of a thrombus that obstructs vascular blood flow locally or detaches and embolizes to occlude blood flow downstream. Embolism is the sudden blocking of a vessel by a clot or foreign material which has been brought to its site of lodgment by the blood current. (Thrombo-)phlebitis is an inflammation of a vein (phlebitis) associated with thrombus formation (thrombosis).

This SMQ includes 3 sub-SMQ:

- Embolic and thrombotic events, venous (SMQ)
- Embolic and thrombotic events, arterial (SMQ)
- Embolic and thrombotic events, vessel type unspecified and mixed arterial and venous (SMQ)

End point type	Primary

Reporting groups

Reporting group title	Cohort 1: OCTA101 50 IU/kg sc
-----------------------	-------------------------------

Reporting group description:

Single-period investigation with a single sc dose of 50 IU/kg OCTA101 profiled up to 72 hours after dosing (abdomen or thigh) Following review of safety and tolerability data by Data Monitoring Committee a daily prophylactic dosing (40-60 IU/kg) for 3 months.

At the end of the 3-month daily prophylactic period PK assessment was to be performed with 50 IU/kg OCTA101 (abdomen).

Reporting group title	Cohort 2 : OCTA101 100 IU/kg sc
-----------------------	---------------------------------

Reporting group description:

Single-period investigation with a single sc dose of 100 IU/kg OCTA101 profiled up to 96 hours after dosing. (abdomrn of thigh) Following review of safety and tolerability data by Data Monitoring Committee a daily prophylactic dosing (40-60 IU/kg) for 3 months. At the end of the 3-month daily prophylactic period PK assessment was to be performed with 50 IU/kg OCTA101 (abdomen).

4 patients completed the PK assessment, but only 2 completed the 3-month daily sc treatment period as the DMC recommended cessation of all current and planned dosing of OCTA101 for any reason

Reporting group title	Cohort 3: Nuwiq 50 IU/kg iv followed by OCTA101 50 IU/kg sc
-----------------------	---

Reporting group description:

Two-period investigation of a single iv dose of 50 IU/kg Nuwiq profiled for up to 72 hours after dosing followed by sc dose of 50 IU/kg OCTA101 administered into the abdomen profiled up to 72 hours. Treatments were to be administered in fixed sequence, with Nuwiq first. Following review of safety and tolerability data by Data Monitoring Committee daily prophylactic dosing (40-60 IU/kg) for 3 months

8 patients completed the PK assessment but 0 completed the 3-month daily sc treatment period as the DMC recommended cessation of all current and planned dosing of OCTA101 for any reason

Reporting group title	Cohort 5: OCTA101 20 , 40 and 60 IU/kg sc
-----------------------	---

Reporting group description:

Three-period investigation of single sc doses of 20, 40, and 60 IU/kg OCTA101 profiled up to 72 hours after dosing, respectively. Treatments were to be administered in fixed dose-ascending sequence (each in the abdomen). 4 patients completed the PK assessment, but were not assigned to treatment as the DMC recommended cessation of all current and planned dosing of OCTA101 for any reason.

Reporting group title	Cohort 6: Nuwiq iv prophylaxis, OCTA101 sc daily
-----------------------	--

Reporting group description:

Planned as 6-month prophylactic treatment with 12.5 IU/kg OCTA101 sc daily, then 25 IU/kg OCTA101 sc, and then depending on the overall data of the first 2 dose levels, 40 IU/kg OCTA101 sc could be considered (exact dosing depends on vial strength). Site of administration (abdomen or thigh) to be chosen by the patient. The study was stopped prematurely during the 12.5 IU/kg OCTA101 sc daily 16 patients entered the Nuwiq iv run-in and 10 patients went on to receive OCTA101 12.5 IU/kg. The study was terminated before treatment could be completed.

Serious adverse events	Cohort 1: OCTA101 50 IU/kg sc	Cohort 2 : OCTA101 100 IU/kg sc	Cohort 3: Nuwiq 50 IU/kg iv followed by OCTA101 50 IU/kg sc
Total subjects affected by serious adverse events			
subjects affected / exposed	0 / 4 (0.00%)	2 / 4 (50.00%)	1 / 8 (12.50%)

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
25 September 2019	<p>Amendment 1</p> <ul style="list-style-type: none">• The study timelines were updated.• It was clarified that only 1 study centre will be required.• It was clarified that the molar ratio of 1:6 FVIII to OCTA12 is with regards to the binding sites in OCTA12.• An additional PK assessment was added in all patients from Cohorts 1 and 2 who completed their 3-month daily injection period further characterizing the PK of FVIII:C and OCTA12.• Clarification of the use of vials to achieve targeted doses.• Clarification that haemophilia joint health score (HJHS) was to be assessed at screening.• Final physical examination in Cohorts 1 and 2 moved to end of additional PK assessment.• Time windows for additional PK assessment in Cohorts 1 and 2 added.• Change of address for central laboratory assessing anti-OCTA12.
19 November 2019	<p>Amendment 2</p> <ul style="list-style-type: none">• Based on the results from Cohorts 1 and 2, the sponsor and DMC decided that escalation to higher doses should not take place and that further characterization of the 50 IU/kg dose was instead warranted. The study design was modified accordingly. Cohort 4 was cancelled.• The benefit-risk statement was updated to reflect the observation of an inhibitor in Cohort 2 and the revised study design. The stopping rules were also revised.• It was clarified that the full content of vials does not have to be injected.
28 April 2020	<p>Amendment 3</p> <ul style="list-style-type: none">• The study design was adapted based on the observation of inhibitor formation in Cohort 2, with the introduction of another cohort, Cohort 6. In Cohort 6, 12.5 IU/kg OCTA101, then 25 IU/kg OCTA101, and then 40 IU/kg OCTA101 daily prophylaxis will be investigated in a cohort of 16 patients following a run-in period with Nuwiq iv prophylaxis.• The protocol was updated to reflect the status of the study at the time of amendment 3 and a summary of findings from Cohorts 1, 2, 3 and 5 was added.• The benefit-risk statement was updated to reflect the observation of an inhibitor in Cohort 2 and the revised study design. The stopping rules were also revised.• A new exclusion criterion was added: "For Cohort 6, patients with a positive LumiTope test at screening will be excluded."• Home visits by a study nurse were planned for Cohort 6.• Given the revised study design, the estimated date for the clinical end of the study was updated.
06 July 2020	<p>Amendment 4</p> <ul style="list-style-type: none">• At the request of the Bulgarian Drug Agency, there will be no home visits by a study nurse in Cohort 6.• The IND for this product was withdrawn so the IND number was removed from the protocol.• The test base for inhibitor determination was clarified.• The method for determining positive/negative LumiTope assay results was added.
03 March 2021	<p>Amended Protocol version 08</p> <p>Cohort 6 revised to: around 18 – 20 patients (to compensate for possible early drop-outs) will have an initial 4 to 6-week run-in treatment period with Nuwiq iv prophylaxis followed by 12.5 IU/kg OCTA101 sc daily prophylaxis for >3 up to 6-7 months. With DMC agreement, the patients will then proceed to 25 IU/kg OCTA101 sc daily prophylaxis for 6-7 months. Based on the results of both dosing phases, a 40 IU/kg OCTA101 will be considered.</p>

30 July 2021	Amended Protocol version 09 It was decided to stop all further treatment with OCTA101, but to offer all enrolled patients access to Nuwiq prophylactic treatment until they were integrated into the National Health Insurance program for haemophilia A patients, again, but no longer than until the end of September 2021 + 2 week time window.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
02 December 2019	The DMC put the study on hold on 02-Dec-2019 as two patients of cohort 2 had developed an inhibitor to FVIII. As a consequence, patients of cohort 3 terminated the IMP treatment prematurely while patients of cohorts 1, 2 and 5 had already completed IMP study treatment at this time (there were no cohort 4 patients). Later on, the study continued with a revised protocol with a new cohort (cohort 6).	07 October 2020
