Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Interim
Date of interim/final analysis	18 October 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	18 October 2021
Global end of trial reached?	No

Notes:

General information about the trial

Main objective of the trial:

To determine the recommended Phase 2 dose (RP2D) of belantamab mafodotin in combination with pembrolizumab, and to evaluate safety and clinical activity of the combination in subjects with RRMM.

Protection of trial subjects:

Not Applicable

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	14 March 2019
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	36 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 12
Country: Number of subjects enrolled	Germany: 8
Country: Number of subjects enrolled	Spain: 4
Country: Number of subjects enrolled	United States: 17
Worldwide total number of subjects	41
EEA total number of subjects	12

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	20
From 65 to 84 years	21

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

This study consists of Part 1 and Part 2. Total 41 participants were enrolled. Out of 41 participants, 13 participants were randomized in Part 1 (Dose Escalation) and 28 were randomized to Part 2 (Cohort Expansion). The primary analysis results are presented. Additional results will be provided within one year after study completion.

Pre-assignment

Screening details:

NA

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Part 1: Belantamab mafodotin 2.5 mg/kg + Pembrolizumab 200 mg

Arm description:

Participants were administered 2.5 mg/kg of belantamab mafodotin in combination with 200 mg of pembrolizumab via intravenous (IV) infusion on Day 1 of each 21-day Cycle up to until disease progression, intolerable toxicity, informed consent withdrawal, or for a maximum of 35 cycles.

Arm type	Experimental
Investigational medicinal product name	Belantamab mafodotin+Pembrolizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Belantamab mafodotin was administered as a 2.5 mg/kg dose in combination with 200 mg of pembrolizumab via IV infusion

Arm title	Part 1: Belantamab mafodotin 3.4 mg/kg + Pembrolizumab 200 mg
------------------	---

Arm description:

Participants were administered 3.4 mg/kg of belantamab mafodotin in combination with 200 mg of pembrolizumab via IV infusion on Day 1 of each 21-day Cycle up to until disease progression, intolerable toxicity, informed consent withdrawal, or for a maximum of 35 cycles.

Arm type	Experimental
Investigational medicinal product name	Belantamab mafodotin+Pembrolizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Belantamab mafodotin was administered as a 3.4 mg/kg dose in combination with 200 mg of pembrolizumab via IV infusion

Arm title	Part 2: Belantamab mafodotin 2.5 mg/kg + Pembrolizumab 200 mg
------------------	---

Arm description:

Belantamab mafodotin recommended phase 2 dose (RP2D) of 2.5 mg/kg in combination with fixed dose of 200 mg of pembrolizumab determined in the Dose Escalation phase was administered to participants

via IV infusion on Day 1 of each 21-day Cycle up to until disease progression, intolerable toxicity, informed consent withdrawal, or for a maximum of 35 cycles.

Arm type	Experimental
Investigational medicinal product name	Belantamab mafodotin+Pembrolizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Belantamab mafodotin was administered as a 2.5 mg/kg dose in combination with 200 mg of pembrolizumab via IV infusion

Reporting group title	Part 2: Belantamab mafodotin 2.5 mg/kg + Pembrolizumab 200 mg
Reporting group description: Belantamab mafodotin recommended phase 2 dose (RP2D) of 2.5 mg/kg in combination with fixed dose of 200 mg of pembrolizumab determined in the Dose Escalation phase was administered to participants via IV infusion on Day 1 of each 21-day Cycle up to until disease progression, intolerable toxicity, informed consent withdrawal, or for a maximum of 35 cycles.	

Primary: Part 1 - Number of participants with adverse events (AEs) and serious adverse events (SAEs)

End point title	Part 1 - Number of participants with adverse events (AEs) and serious adverse events (SAEs) ^{[1][2]}
End point description: An AE is any untoward medical occurrence in a clinical investigation participant, temporally associated with the use of a medicinal product, whether or not considered related to the medicinal product. SAE is defined as any untoward medical occurrence that, at any dose results in death, is life-threatening, requires hospitalization or prolongation of existing hospitalization, results in disability/incapacity, is a congenital anomaly/birth defect, other situations which involve medical or scientific judgment or is associated with liver injury and impaired liver function.	
End point type	Primary
End point timeframe: Up to approximately 31 months	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive statistics are presented, per protocol.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The endpoints are different for the different parts of the study. Hence, for any given endpoint, results are presented either for Part 1 or Part 2 arm.

End point values	Part 1: Belantamab mafodotin 2.5 mg/kg + Pembrolizumab 200 mg	Part 1: Belantamab mafodotin 3.4 mg/kg + Pembrolizumab 200 mg

Statistical analyses

No statistical analyses for this end point

Primary: Part 1 - Number of participants with dose limiting toxicities (DLTs)

End point title	Part 1 - Number of participants with dose limiting toxicities (DLTs) ^{[3][4]}
-----------------	--

End point description:

DLT is an AE that is considered by the investigator to be clinically relevant and attributed to the study therapy during the 21 day DLT period and meets at least one of the DLT criteria: any Grade 4 and 3 non-hematologic toxicity, any Grade 3 or greater non-hematologic laboratory value, hematologic toxicity lasting ≥ 7 days, except Grade 4 thrombocytopenia of any duration or Grade 3 thrombocytopenia associated with clinically significant bleeding. Grade 3 or greater febrile neutropenia lasting >48 hours (h) despite adequate treatment, Nephrotoxicity requiring dialysis, Liver toxicity, prolonged delay (>14 days) in initiating Cycle 2 due to any treatment related toxicity, any treatment-related toxicity that causes discontinuation of treatment during Cycle 1, any other toxicity considered to be dose-limiting that occurs beyond 21 days and any other event which in the judgment of the investigator and GlaxoSmithKline Medical Monitor is considered to be a DLT.

End point type	Primary
----------------	---------

End point timeframe:

Up to 21 days

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive statistics are presented, per protocol.

[4] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The endpoints are different for the different parts of the study. Hence, for any given endpoint, results are presented either for Part 1 or Part 2 arm.

Statistical analyses

No statistical analyses for this end point

Primary: Part 1 - Number of participants with worst-case grade change from baseline in hematology parameters

End point title	Part 1 - Number of participants with worst-case grade change from baseline in hematology parameters ^{[5][6]}
-----------------	---

End point description:

Blood samples were collected for the analysis of following hematology parameters: hemoglobin, White blood cells (WBC) count, lymphocytes, neutrophils and platelet count. The laboratory parameters were graded according to NCI-CTCAE version 4.03. Grade 1: mild; Grade 2: moderate; Grade 3: severe or medically significant; Grade 4: life-threatening consequences. Higher grade indicates greater severity and an increase in CTCAE grade was defined relative to the Baseline grade. Baseline was defined as the most recent, non-missing value prior to or on the first study treatment dose date. Any worst-case post baseline increase in grade along with any increase to a maximum grade of 3 and a maximum grade of 4 are presented.

End point type	Primary
----------------	---------

End point timeframe:

Baseline (Day 1) and up to approximately 31 months

Notes:

[5] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive statistics are presented, per protocol.

[6] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The endpoints are different for the different parts of the study. Hence, for any given endpoint, results are presented either for Part 1 or Part 2 arm.

Primary: Part 1 - Number of participants with abnormal urinalysis results

End point title	Part 1 - Number of participants with abnormal urinalysis
-----------------	--

End point description:

Urine samples were collected to assess urine glucose, protein, occult blood and ketones using dipstick method. The dipstick test gave results in a semi-quantitative manner, and results for urinalysis parameters were recorded as negative, trace, 1+, 2+, 3+ indicating proportional concentrations in the urine sample. Baseline was defined as the most recent, non-missing value prior to or on the first study treatment dose date. Result for urinalysis parameters were recorded as no change/decreased and any increase. Data for worst-case post baseline are presented.

End point type	Primary

Secondary: Part 2 - Number of participants with worst-case grade change from baseline in vital signs: DBP and SBP

End point title	Part 2 - Number of participants with worst-case grade change from baseline in vital signs: DBP and SBP ^[34]
-----------------	--

End point description:

DBP and SBP were measured after resting for at least 5 minutes in a supine or semi-recumbent position. They were graded according to NCI-CTCAE version 4.0. For SBP: Grade 0 (≤ 120 millimeter of mercury [mmHg]), Grade 1 (121-139 mmHg), Grade 2 (140-159 mmHg), Grade 3 (≥ 160 mmHg). For DBP: Grade 0 (≤ 80 mmHg), Grade 1 (81-89 mmHg), Grade 2 (90-99 mmHg), Grade 3 (≥ 100 mmHg). Higher grade indicates greater severity. Baseline was defined as the most recent, non-missing value prior to or on the first study treatment dose date. An increase is defined as an increase in grade relative to Baseline grade. Data for worst-case post Baseline with any grade increase and a maximum post-baseline grade increase to Grade 3 from their baseline grade are presented.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline and up to approximately 31 months

Notes:

[34] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The endpoints are different for the different parts of the study. Hence, for any given endpoint, results are presented either for Part 1 or Part 2 arm.

Statistical analyses

No statistical analyses for this end point

Secondary: Part 2 - Percentage of participants with clinical benefit rate

End point title	Part 2 - Percentage of participants with clinical benefit rate ^[49]
-----------------	--

End point description:

Clinical benefit rate was defined as the percentage of participants with a confirmed minimal response (MR) or better according to the IMWG Response Criteria. MR is $\geq 25\%$ but $< 49\%$ reduction of serum M-protein and reduction in 24-hour urinary M-protein by 50-89%.

End point type	Secondary
----------------	-----------

End point timeframe:

Up to approximately 31 months

Notes:

[49] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The endpoints are different for the different parts of the study. Hence, for any given endpoint, results are presented either for Part 1 or Part 2 arm.

End point values	Part 2: Belantamab mafodotin 2.5 mg/kg + Pembrolizumab 200 mg			
Subject group type	Reporting group			
Number of subjects analysed	28			
Units: Percentage of Participants				
number (confidence interval 95%)	43 (24.5 to 62.8)			

Statistical analyses

No statistical analyses for this end point

Secondary: Part 2 - Duration of response

End point title	Part 2 - Duration of response ^[50]
-----------------	---

End point description:

Duration of response was defined as the time from first documented evidence of PR or better, to the time when disease progression (PD) is documented per IMWG response criteria; or death due to PD occurs among participants who achieve an overall response, i.e. confirmed PR or better. PD= Increase of 25% from lowest confirmed response value in 1 or more of the following criteria: Serum M-protein with absolute increase of ≥ 0.5 g/dL; Serum M-protein increase ≥ 1 g/dL if the lowest M-component was ≥ 5 g/dL; Urinary M-protein (absolute increase must be ≥ 200 mg per 24 h). PR = $\geq 50\%$ reduction of serum M-protein and reduction in 24-hour urinary M-protein by $\geq 90\%$ or to < 200 mg/24 h. 99999= Upper limit of 95% CI was not estimate due to limited number of events.

End point type	Secondary
----------------	-----------

End point timeframe:

End point values	Part 1: Belantamab mafodotin 2.5 mg/kg + Pembrolizumab 200 mg	Part 1: Belantamab mafodotin 3.4 mg/kg + Pembrolizumab 200 mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	0 ^[128]	0 ^[129]		
Units: Titers				
median (full range (min-max))	(to)	(to)		

Notes:

[128] - As there were no positive ADA results, there were no titer values..

[129] - As there were no positive ADA results, there were no titer values..

Statistical analyses

No statistical analyses for this end point

Secondary: Part 2 - Titers of ADAs against belantamab mafodotin

End point title	Part 2 - Titers of ADAs against belantamab mafodotin ^[130]
-----------------	---

End point description:

Serum samples collected for the analysis of the presence of ADAs using validated immunoassays. All samples were to be further tested in screening assay, and positive samples were further to be characterized for antibody titers.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline and up to approximately 31 months

Notes:

[130] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The endpoints are different for the different parts of the study. Hence, for any given endpoint, results are presented either for Part 1 or Part 2 arm.

End point values	Part 2: Belantamab mafodotin 2.5 mg/kg + Pembrolizumab 200 mg			
Subject group type	Reporting group			
Number of subjects analysed	0 ^[131]			
Units: Titers				
median (full range (min-max))	(to)			

Notes:

[131] - No participants with positive ADA results, hence titer (concentration) was not collected.

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All cause mortality, non-serious adverse events (Non-SAEs) and serious adverse events (SAEs) were collected up to approximately 31 months.

Adverse event reporting additional description:

Data analysis is still on-going & additional results will be provided after study completion.

Assessment type	Systematic

Reporting groups

Reporting group title	Part 1: Belantamab mafodotin 2.5 mg/kg + Pembrolizumab 200 mg
-----------------------	---

Reporting group description:

Participants were administered 2.5 mg/kg of belantamab mafodotin in combination with 200 mg of pembrolizumab via intravenous (IV) infusion on Day 1 of each 21-day Cycle up to until disease progression, intolerable toxicity, informed consent withdrawal, or for a maximum of 35 cycles.

Reporting group title	Part 1: Belantamab mafodotin 3.4 mg/kg + Pembrolizumab 200 mg
-----------------------	---

Reporting group description:

Participants were administered 3.4 mg/kg of belantamab mafodotin in combination with 200 mg of pembrolizumab via IV infusion on Day 1 of each 21-day Cycle up to until disease progression, intolerable toxicity, informed consent withdrawal, or for a maximum of 35 cycles.

Reporting group title	Part 2: Belantamab mafodotin 2.5 mg/kg + Pembrolizumab 200 mg
-----------------------	---

Reporting group description:

Belantamab mafodotin RP2D of 2.5 mg/kg in combination with fixed dose of 200 mg of pembrolizumab determined in the Dose Escalation phase was administered to participants via IV infusion on Day 1 of each 21-day Cycle up to until disease progression, intolerable toxicity, informed consent withdrawal, or for a maximum of 35 cycles.

Serious adverse events	Part 1: Belantamab mafodotin 2.5 mg/kg + Pembrolizumab 200 mg	Part 1: Belantamab mafodotin 3.4 mg/kg + Pembrolizumab 200 mg	Part 2: Belantamab mafodotin 2.5 mg/kg + Pembrolizumab 200 mg

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
26 September 2018	The statistical model in dose escalation was revised from Bayesian Logistic Regression Model to mTPI and the overall sample size and related analytical methods had been changed. Part 2 stopping criteria had been added for continuous safety monitoring
26 February 2020	The protocol had been amended to address feedback from regulatory agencies, inclusions of items noted in protocol clarification letters, revisions due to discrepancies, revision of study drug related language, and other clarifications. DLT evaluable population was included to analysis population to further define Part 1 population.
27 August 2021	The protocol had been amended to update pembrolizumab safety, ECI overdose language, and standard text based on latest IB update for pembrolizumab (2021) and belantamab mafodotin (2021). Added the primary analysis at approximately 15 months follow-up from LSLV. Updated the planned derived PK parameters and PK/PD analyses, updated the data monitoring language, medical monitoring information, and SAE reporting.
21 February 2022	The protocol had been amended to provide updates including the addition of the end of study definition section and continued access to study intervention after the end of the study section (Post Analysis Continued Treatment [PACT]).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
