Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001313-PIP01-12
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 September 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	07 May 2021
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To characterize the pharmacokinetics (PK) of a single intravenous dose of CAZ-AVI in pediatric subjects aged 3 months to less than 18 years who are receiving systemic antibiotic therapy for suspected or confirmed nosocomial pneumonia, including ventilator-associated pneumonia.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Council for Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 June 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	China: 2
Country: Number of subjects enrolled	Taiwan: 2
Worldwide total number of subjects	4
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	2
Children (2-11 years)	2
Adolescents (12-17 years)	0

Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Hospitalised pediatric subjects who were receiving systemic antibiotic therapy for suspected or confirmed nosocomial pneumonia (NP), including ventilator-associated pneumonia (VAP) were enrolled.

Pre-assignment

Screening details:

Only 4 subjects were enrolled before trial was stopped prematurely. Data cannot be reported per cohort as planned because doing so would risk re-identification of subjects. Thus, to avoid this potential risk, only disposition and baseline characteristics data are reported for all subjects as 1 reporting group and no data for endpoints are reported.

Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	All Enrolled Subjects: Ceftazidime-Avibactam (CAZ-AVI)
------------------	--

Arm description:

Subjects received 50 milligram (mg)/kilogram (kg) of CAZ and 12.5 mg/kg of AVI intravenously.

Arm type	Experimental
Investigational medicinal product name	CAZ-AVI
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received 50 mg/kg of CAZ and 12.5 mg/kg of AVI intravenously.

Number of subjects in period 1	All Enrolled Subjects: Ceftazidime-Avibactam (CAZ-AVI)
Started	4
Completed	4

Reporting groups

Reporting group title	All Enrolled Subjects: Ceftazidime-Avibactam (CAZ-AVI)
-----------------------	--

Reporting group description:

Subjects received 50 mg/kg of CAZ and 12.5 mg/kg of AVI intravenously.

	All Enrolled Subjects: Ceftazidime-Avibactam (CAZ-AVI)		
Serious adverse events			
Total subjects affected by serious adverse events			
subjects affected / exposed	0 / 4 (0.00%)		
number of deaths (all causes)	0		
number of deaths resulting from adverse events	0		

Frequency threshold for reporting non-serious adverse events: 0 %

	All Enrolled Subjects: Ceftazidime-Avibactam (CAZ-AVI)		
Non-serious adverse events			
Total subjects affected by non-serious adverse events			
subjects affected / exposed	0 / 4 (0.00%)		

Notes:

[1] - There are no non-serious adverse events recorded for these results. It is expected that there will be at least one non-serious adverse event reported.

Justification: Data cannot be reported per cohort as planned because doing so would risk re-identification of subjects.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
07 May 2021	Following approval of the HAP/VAP indication in pediatric subjects in the EU in October 2020 based on extrapolation of efficacy and, based on subsequent regulatory consultations as well as slow enrollment, the sponsor made the decision to terminate the study and analyze the current dataset. This decision was not due to safety concerns.	-

Notes:

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Only 4 subjects were enrolled in this study, with each enrolled in a different cohort. Endpoints and AE data were not reported by cohort as planned in the protocol because doing so would risk re-identification of the individual subjects.

Notes:
