Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	15 September 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	13 January 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to assess the antitumor activity of durvalumab alone and/or in combination with novel agents.

Protection of trial subjects:

The conduct of this clinical study met all local legal and regulatory requirements. The study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and the International Conference on Harmonization guideline E6: Good Clinical Practice. Participating participant signed informed consent form and could withdraw from the study at any time without any disadvantage and without having to provide a reason for this decision. Only investigators qualified by training and experience were selected as appropriate experts to investigate the study drug.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	08 March 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 2
Country: Number of subjects enrolled	France: 5
Country: Number of subjects enrolled	Italy: 1
Country: Number of subjects enrolled	Portugal: 3
Country: Number of subjects enrolled	Spain: 7
Country: Number of subjects enrolled	Switzerland: 1
Country: Number of subjects enrolled	United States: 65
Worldwide total number of subjects	84
EEA total number of subjects	16

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	32
From 65 to 84 years	50
85 years and over	2

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 84 participants were enrolled across 7 countries worldwide.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Durvalumab 1500 mg

Arm description:

Participants received durvalumab 1500 mg intravenously (IV) every 4 weeks (Q4W; on Week 1 Day 1) until disease progression, unacceptable toxicity, or other reason of treatment discontinuation over a 28-day treatment period. Surgical resection was planned between Day 29 and Day 42. After surgical resection, participants were followed up to Day 105 (starting from Week 1 Day 1).

Arm type	Experimental
Investigational medicinal product name	Durvalumab
Investigational medicinal product code	MEDI4736
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Durvalumab 1500 mg was administered IV Q4W (on Week 1 Day 1) until disease progression, unacceptable toxicity, or other reason of treatment discontinuation over a 28-day treatment period.

Arm title	Durvalumab 1500 mg + Oleclumab 3000 mg
------------------	--

Arm description:

Participants received durvalumab 1500 mg IV Q4W (on Week 1 Day 1) and oleclumab 3000 mg IV every 2 weeks (Q2W; on Week 1 Day 1 and Week 3 Day 1) until disease progression, unacceptable toxicity, or other reason of treatment discontinuation over a 28-day treatment period. Surgical resection was planned between Day 29 and Day 42. After surgical resection, participants were followed up to Day 105 (starting from Week 1 Day 1).

Arm type	Experimental
Investigational medicinal product name	Oleclumab
Investigational medicinal product code	MEDI9447
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Oleclumab 3000 mg was administered IV Q2W (on Week 1 Day 1 and Week 3 Day 1) until disease progression, unacceptable toxicity, or other reason of treatment discontinuation over a 28-day treatment period.

Investigational medicinal product name	Durvalumab
Investigational medicinal product code	MEDI4736
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Durvalumab 1500 mg was administered IV Q4W (on Week 1 Day 1) until disease progression, unacceptable toxicity, or other reason of treatment discontinuation over a 28-day treatment period.

Arm title	Durvalumab 1500 mg + Monalizumab 750 mg
------------------	---

Arm description:

Participants received durvalumab 1500 mg IV Q4W (on Week 1 Day 1) and monalizumab 750 mg IV Q2W (on Week 1 Day 1 and Week 3 Day 1) until disease progression, unacceptable toxicity, or other reason of treatment discontinuation over a 28-day treatment period. Surgical resection was planned between Day 29 and Day 42. After surgical resection, participants were followed up to Day 105 (starting from Week 1 Day 1).

Arm type	Experimental
Investigational medicinal product name	Durvalumab
Investigational medicinal product code	MEDI4736
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Durvalumab 1500 mg was administered IV Q4W (on Week 1 Day 1) until disease progression, unacceptable toxicity, or other reason of treatment discontinuation over a 28-day treatment period.

Investigational medicinal product name	Monalizumab
Investigational medicinal product code	IPH2201
Other name	
Pharmaceutical forms	Powder and solution for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Monalizumab 750 mg was administered IV Q2W (on Week 1 Day 1 and Week 3 Day 1) until disease progression, unacceptable toxicity, or other reason of treatment discontinuation over a 28-day treatment period.

Arm title	Durvalumab 1500 mg + Danvatirsen 200 mg
------------------	---

Arm description:

Participants received danvatirsen 200 mg IV on Days 1, 3, and 5 of Week 0 (7-day danvatirsen lead-in period), followed by durvalumab 1500 mg IV Q4W (on Week 1 Day 1) and danvatirsen 200 mg IV every week (on Week 1 Day 1, Week 2 Day 1, Week 3 Day 1, and Week 4 Day 1) until disease progression, unacceptable toxicity, or other reason of treatment discontinuation over a 28-day treatment period. Surgical resection was planned between Day 29 and Day 42. After surgical resection, participants were followed up to Day 105 (starting from Week 1 Day 1).

Arm type	Experimental
Investigational medicinal product name	Danvatirsen
Investigational medicinal product code	AZD9150
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Danvatirsen 200 mg was administered IV on Days 1, 3, and 5 of Week 0 (7-day danvatirsen lead-in period), followed by every week (on Week 1 Day 1, Week 2 Day 1, Week 3 Day 1, and Week 4 Day 1) until disease progression, unacceptable toxicity, or other reason of treatment discontinuation over a 28-day treatment period.

Investigational medicinal product name	Durvalumab
Investigational medicinal product code	MEDI4736
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Durvalumab 1500 mg was administered IV Q4W (on Week 1 Day 1) until disease progression, unacceptable toxicity, or other reason of treatment discontinuation over a 28-day treatment period.

Primary: Major Pathological Response Rate

End point title	Major Pathological Response Rate ^[1]
End point description: Major pathological response rate is defined as percentage of participants with $\leq 10\%$ residual viable tumor cells in the resected specimen. Intent-to-treat (ITT) population was analysed which included participants who were randomized and were analyzed according to their randomized treatment group.	
End point type	Primary
End point timeframe: Day 1 through Day 42	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Statistical analysis was not applicable since there were no inferential statistics, only descriptive statistics were performed for this end point.

End point title	Number of Participants With Treatment Emergent Adverse Events (TEAEs) and Treatment Emergent Serious Adverse Events (TESAEs)
-----------------	--

End point description:

An adverse event (AE) is any untoward medical occurrence in a participant who received study drug without regard to possibility of causal relationship. A serious adverse event (SAE) is an AE resulting in any of the following outcomes or deemed significant for any other reason: death; initial or prolonged inpatient hospitalization; life threatening experience (immediate risk of dying); persistent or significant disability/incapacity; congenital anomaly. The TEAEs are defined as events present at baseline that worsened in intensity after administration of study drug or events absent at baseline that emerged after administration of study drug. As-treated population was analysed which included all participants who received any study drug and analyzed according to the treatment they actually received.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
26 November 2018	Doses should be omitted, and therapy may be discontinued at the discretion of the investigator, for toxicities that occurred in participants treated with durvalumab + oleclumab (\geq Grade 2 pulmonary oedema or \geq Grade 3 peripheral oedema). Electrocardiogram (ECG) assessments were added pre dose and immediately after the end of danvatirsén infusion on Week 0 Day 1 and Week 3 Day 1, respectively, and as clinically indicated. Pharmacokinetic assessments were added on Week 3, Day 1 to align with ECG assessments. The SRC would assess feasibility to surgery for all treatment arms and added safety measures in the event that one participant per treatment arm experienced a delay in receiving planned surgery.
18 January 2019	Participant population was revised to include participants with N2 disease (one single nodal station \leq 3 cm only). Forced expiratory volume in one second and Diffusing capacity of the lungs for carbon monoxide requirements were revised from \geq 60% to \geq 50%. Participants who had a curative treated malignancy with no known active disease for $>$ 2 years before enrolment on the study were eligible to enroll into this study. Monalizumab dose preparation, administration, and manufacturing process was updated.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
13 April 2020	The trial was interrupted due to COVID-19 pandemic.	07 May 2020

Notes:

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The pharmacokinetic and immunogenicity samples are still being analyzed. Results for these outcome measures will be posted by 30Jun2022.

Notes:
