Notes:

General information about the trial

Main objective of the trial:

To compare the efficacy of multiple dose levels of PF-06700841 topical cream versus vehicle, applied once daily (QD) or twice daily (BID), on percent change from baseline in eczema area and severity Index (EASI) in subjects with mild or moderate atopic dermatitis (AD).

Protection of trial subjects:

The study was conducted in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Council for Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Secondary: Percentage of Subjects Achieving >=4 Points Reduction in Peak Pruritus Numerical Rating Scale (PP-NRS) From Baseline at Weeks 1, 2, 3, 4, 6 and Follow-up Visit: Non-responder Imputation

End point title	Percentage of Subjects Achieving >=4 Points Reduction in Peak Pruritus Numerical Rating Scale (PP-NRS) From Baseline at Weeks 1, 2, 3, 4, 6 and Follow-up Visit: Non-responder Imputation

End point description:

The severity of itch (pruritus) due to AD was assessed using a horizontal NRS. Subjects at specified time points were asked the following question: "How would you rate your itch due to AD at the worst moment during the previous 24 hours?" The scale ranged from 0-10, where 0= no itch and 10= worst itch imaginable. Higher scores indicated worse itch. Full analysis set included all subjects who were randomly assigned to study drug and who applied at least 1 dose of study drug. Here, "number of subjects analysed" signifies number of subjects evaluable for this end point. NRI method: subjects with missing values were considered to be non-responders.

End point type	Secondary

End point timeframe:

Baseline, Week 1, 2, 3, 4, 6 and follow up visit (28 days after last dose of study drug = maximum up to Day 71)

Secondary: Percent Change From Baseline in Affected Body Surface Area (BSA) at Weeks 1, 2, 3, 4, 6 and Follow-up Visit

End point title	Percent Change From Baseline in Affected Body Surface Area (BSA) at Weeks 1, 2, 3, 4, 6 and Follow-up Visit

End point description:

4 body regions: head and neck, upper limbs, trunk and lower limbs. Scalp, palms and soles were excluded. BSA calculated using handprint method. Number(No.)of handprints (size of subject's full palmer hand) fitting in affected area of body region was estimated. Maximum no. of handprints were 10 for head and neck, 20 for upper limbs, 30 for trunk and 40 for lower limbs. Surface area of body region equivalent to 1 handprint: 1 handprint = 10% for head and neck, 5% for upper limbs, 3.33% for trunk and 2.5% for lower limbs. Percent BSA for a body region was calculated as = total no. of handprints in a body region * % surface area equivalent to 1 handprint. Overall % BSA for an individual: arithmetic mean of % BSA of all 4 body regions, ranged from 0 to 100%, with higher values representing greater severity of AD. FAS population was analysed. N=number of subjects evaluable for this endpoint and "n"=subjects evaluable for each specified time point.

End point type	Secondary

End point title	Percentage of Subjects Achieving >=75% Improvement in Eczema Area and Severity Index Total Score (EASI-75) From Baseline at Weeks 1, 2, 3, 4 and 6: Non-responder Imputation

End point description:

EASI:severity of subject’s AD based on severity of AD clinical signs and % of BSA affected. Severity of clinical signs of AD scored separately for each of 4 body regions on4-point scale: 0= absent; 1= mild; 2= moderate; 3= severe. EASI area score was based upon % BSA with AD in each 4 body region: 0 (0%), 1 (>0 to <10%), 2 (10 to <30%), 3 (30 to <50%), 4 (50 to <70%), 5 (70 to <90%) and 6 (90 to 100%). Total EASI score =0.1*Ah*(Eh+Ih+Exh+Lh) + 0.2*Au*(Eu+Iu+ExU+Lu) + 0.3*At*(Et+It+Ext+Lt) + 0.4*Al*(El+Il+Exl+Ll); A = EASI area score; E = erythema; I = induration/papulation; Ex = excoriation; L = lichenification; h = head and neck; u = upper limbs; t =

trunk; l = lower limbs. Total EASI score ranged from 0.0 to 72.0, higher scores = greater severity of AD. FAS:all subjects who were randomly assigned to study drug and applied at least 1 dose of study drug. NRI method: subjects with missing values were considered to be non-responders.

Secondary: Number of Subjects With Treatment-Emergent Adverse Events (AEs) and Serious Adverse Events (SAEs)

End point title	Number of Subjects With Treatment-Emergent Adverse Events

	(AEs) and Serious Adverse Events (SAEs)

End point description:

An AE was any untoward medical occurrence in a subject who received investigational product without regard to possibility of causal relationship. SAE was an AE resulting in any of the following outcomes or deemed significant for any other reason: death; initial or prolonged inpatient hospitalization; life-threatening experience (immediate risk of dying); persistent or significant disability/incapacity; congenital anomaly; medically important events. Treatment-emergent AEs were events between first dose of investigational product and up to 28 days after the last dose of investigational product that were absent before treatment or that worsened relative to pretreatment state. AEs included both SAEs and non-SAEs. Safety analysis set included all subjects who were randomly assigned to study drug and who applied at least 1 dose of study drug.

End point title	Number of Subjects With Each Severity Grade in Local

	Tolerability Assessments

End point description:

Local tolerability skin assessments were performed by investigator and graded based on severity from grade 0 to 4 as: grade 0=none (no evidence of local intolerance); grade 1=mild (minimal erythema and/or oedema, slight glazed appearance); grade 2= moderate (definite erythema and/or oedema with peeling and/or cracking but needs no adaptation of posology) grade 3=severe (erythema, oedema glazing with fissures, few vesicles or papules consider removing topical agent [if still in place]) and grade 4= very severe (strong reaction spreading beyond the treated area, bullous reaction, erosions: removal of topical agent [if still in place]). Higher grades indicated worsening of condition. Only those categories in which at least 1 subject had data were reported.
