Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 August 2020
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	26 August 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

1. To assess the safety, tolerability, and efficacy of ABBV-3373 administered every other week (EOW) intravenously (IV) in subjects with moderately to severely active rheumatoid arthritis (RA) on background methotrexate (MTX).
2. To compare clinical efficacy of ABBV-3373 with adalimumab and to test the concept that an anti-tumor necrosis factor (TNF) antibody-drug-conjugate (ADC) has the potential to provide superior efficacy than the traditional anti-TNF antibody in RA.

Protection of trial subjects:

Subject read and understood the information provided about the study and gave written permission.

Background therapy:

Subjects must have been on oral or parenteral methotrexate (MTX) therapy ≥ 3 months and on a stable prescription of 15 to 25 mg/week (or ≥ 10 mg/week in subjects intolerant of MTX at doses ≥ 15 mg/week) for ≥ 4 weeks prior to the first dose of study drug. Subjects were expected to be able to continue on stable dose of MTX for the duration of study participation.

Evidence for comparator: -

Actual start date of recruitment	27 March 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Hungary: 15
Country: Number of subjects enrolled	Israel: 6
Country: Number of subjects enrolled	Poland: 3
Country: Number of subjects enrolled	Puerto Rico: 5
Country: Number of subjects enrolled	United States: 19
Worldwide total number of subjects	48
EEA total number of subjects	18

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	38
From 65 to 84 years	10
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants with moderately to severely active rheumatoid arthritis (RA) on background methotrexate were enrolled at 14 sites in the United States and Puerto Rico, Poland, Hungary, and Israel.

Pre-assignment

Screening details:

Subjects were randomly assigned in a 2:1 ratio to either ABBV-3373 or adalimumab. Randomization was stratified by current use of systemic glucocorticoid and prior exposure to non-anti-TNF biologics or targeted synthetic disease-modifying antirheumatic drugs (DMARDs) for less than 3 months and terminated not due to lack of efficacy or intolerance.

Period 1

Period 1 title	Period 1: Baseline to Week 12
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Data analyst, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Adalimumab

Arm description:

Participants received 80 mg adalimumab by subcutaneous injection once every other week (EOW) and placebo to ABBV-3373 by intravenous infusion EOW for 12 weeks.

Arm type	Active comparator
Investigational medicinal product name	Adalimumab
Investigational medicinal product code	
Other name	HUMIRA™
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Administered at 80 mg EOW for 12 weeks.

Investigational medicinal product name	Placebo to ABBV-3373
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Administered EOW for 12 weeks.

Arm title	ABBV-3373
------------------	-----------

Arm description:

Participants received 100 mg ABBV-3373 by intravenous infusion EOW and placebo to adalimumab by subcutaneous injection EOW for 12 weeks.

Arm type	Experimental
Investigational medicinal product name	ABBV-3373
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Administered at 100 mg EOW for 12 weeks.

Investigational medicinal product name	Placebo to Adalimumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Administered EOW for 12 weeks.

Number of subjects in period 1	Adalimumab	ABBV-3373
Started	17	31
Completed	17	31

Period 2

Period 2 title	Period 2: Week 12 to Week 24
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Adalimumab / Adalimumab

Arm description:

Participants continued to receive 80 mg adalimumab by subcutaneous injection EOW from Week 12 to Week 24.

Arm type	Active comparator
Investigational medicinal product name	Adalimumab
Investigational medicinal product code	
Other name	HUMIRA™
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Administered at 80 mg EOW for 12 weeks.

Arm title	ABBV-3373 / Placebo
------------------	---------------------

Arm description:

Participants received placebo to adalimumab by subcutaneous injection EOW from Week 12 to Week 24.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Placebo to Adalimumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Administered EOW for 12 weeks.

Number of subjects in period 2	Adalimumab / Adalimumab	ABBV-3373 / Placebo
Started	17	31
Completed	15	30
Not completed	2	1
Consent withdrawn by subject	1	-
Adverse event, non-fatal	1	1

End points

End points reporting groups

Reporting group title	Adalimumab
Reporting group description: Participants received 80 mg adalimumab by subcutaneous injection once every other week (EOW) and placebo to ABBV-3373 by intravenous infusion EOW for 12 weeks.	
Reporting group title	ABBV-3373
Reporting group description: Participants received 100 mg ABBV-3373 by intravenous infusion EOW and placebo to adalimumab by subcutaneous injection EOW for 12 weeks.	
Reporting group title	Adalimumab / Adalimumab
Reporting group description: Participants continued to receive 80 mg adalimumab by subcutaneous injection EOW from Week 12 to Week 24.	
Reporting group title	ABBV-3373 / Placebo
Reporting group description: Participants received placebo to adalimumab by subcutaneous injection EOW from Week 12 to Week 24.	

Primary: Change from Baseline to Week 12 in Disease Activity Score (DAS) 28 (C-reactive Protein [CRP])

End point title	Change from Baseline to Week 12 in Disease Activity Score (DAS) 28 (C-reactive Protein [CRP])[¹]
End point description: The DAS28 (CRP) is a composite index used to assess rheumatoid arthritis disease activity, calculated based on the tender joint count (out of 28 evaluated joints), swollen joint count (out of 28 evaluated joints), Patient's Global Assessment of Disease Activity (measured on a visual analog scale [VAS] from 0-100 mm), and hsCRP (in mg/L). Scores on the DAS28 (CRP) range from 0.96 to approximately 10, where higher scores indicate more disease activity. A negative change from Baseline in DAS28 (CRP) indicates improvement in disease activity. Subjects in the full analysis set (randomized subjects who received at least 1 dose of the study drug) with non-missing Baseline and at least one post-baseline value are included in the analysis.	
End point type	Primary
End point timeframe: Baseline and Week 12	
Notes:	

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Two primary comparisons were performed between ABBV-3373 and adalimumab. The first was the comparison of ABBV-3373 to historical adalimumab reference value -2.13 based on a meta-analysis from 3 historical adalimumab studies. The second comparison was ABBV-3373 to adalimumab with combined in-trial and historical adalimumab data in which the success criterion was posterior probability of ABBV-3373 better than adalimumab >95%.

The results of these analyses are reported in the attachment below.

Secondary: Change from Baseline to Week 12 in Clinical Disease Activity Index (CDAI)

End point title	Change from Baseline to Week 12 in Clinical Disease Activity Index (CDAI)
End point description: The clinical disease activity index (CDAI) is a composite index for assessing disease activity based on the summation of the counts of tender joint count (out of 28 evaluated joints) and swollen joint count (out of 28 evaluated joints), Patient Global Assessment of Disease Activity and Physician Global Assessment of Disease Activity both measured on a VAS from 0 to 10 cm. The total CDAI score ranges from 0 to 76 with higher scores indicating higher disease activity. A negative change from Baseline indicates improvement in disease activity. Subjects in the full analysis set with non-missing Baseline and at least one post-baseline value were included in the analysis.

Dispersion value	3.207

Notes:

[2] - Mixed-effect model repeated measurement (MMRM) analysis with unstructured variance-covariance matrix, including treatment, visit, stratification factors, and treatment-by-visit interaction as fixed factors and Baseline value as covariate.

Secondary: Change from Baseline in Simplified Disease Activity Index (SDAI)

End point title	Change from Baseline in Simplified Disease Activity Index (SDAI)
-----------------	--

End point description:

The SDAI is the numerical sum of five outcome parameters: tender and swollen joint count (based on a 28-joint assessment), Patient Global Assessment of Disease Activity and Physician Global Assessment of Disease Activity both measured on a VAS from 0-10 cm and level of CRP (in mg/dL; normal < 1 mg/dL). The SDAI has a range from 0 to 86, with higher scores indicating higher disease activity. A negative change from Baseline indicates improvement in disease activity.

Subjects in the full analysis set with non-missing Baseline and at least one post-baseline value were included in the analysis.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
20 November 2019	The purpose of this version was to communicate new safety findings regarding a case of anaphylactic shock throughout the protocol.
20 November 2019	Major changes included: <ul style="list-style-type: none">- changed study from Phase 1b to Phase 2a;- added a secondary objective to compare adalimumab with synthetic control to establish assay sensitivity;- added clarifications for potentially used concomitant medications;- updated statistical details for clarity;- removed interim efficacy analysis.
14 March 2020	The purpose of this version was to add the evaluation of another ADC cohort (ABBV-154) in addition to the ABBV-3373 cohort.
26 August 2020	The purpose of this version was to remove the ABBV-154 cohort.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
