

Clinical trial results:

A Multicenter, Randomized, Open-label, Crossover, Phase 2 Study to Evaluate the Safety and Pharmacokinetics of IgPro20 (subcutaneous immunoglobulin, Hizentra®) and IgPro10 (intravenous immunoglobulin, Privigen®) in Adults with Systemic Sclerosis (SSc)

Summary

EudraCT number	2018-003149-41
Trial protocol	DE FR GB IT
Global end of trial date	17 May 2022

Results information

Result version number	v1 (current)
This version publication date	23 June 2023
First version publication date	23 June 2023

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	17 May 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	17 May 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The purpose of this study was to investigate the safety, tolerability, and pharmacokinetics of IgPro20 in subjects with diffuse cutaneous systemic sclerosis (dcSSc). The pharmacokinetic study aim was to evaluate the relative bioavailability of IgPro20, and characterize pharmacokinetics of IgPro20 and IgPro10, respectively, in subjects with dcSSc. Safety, tolerability, and pharmacokinetics of IgPro10 was also evaluated.

Protection of trial subjects:

This study was carried out in accordance with the International Conference on Harmonisation Good Clinical Practice guidelines and standard operating procedures for clinical research and development at CSL Behring.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	21 September 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 17
Country: Number of subjects enrolled	United Kingdom: 6
Country: Number of subjects enrolled	Germany: 1
Country: Number of subjects enrolled	Italy: 1
Country: Number of subjects enrolled	Australia: 2
Worldwide total number of subjects	27
EEA total number of subjects	19

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	25
From 65 to 84 years	2
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Subjects were enrolled at study centers in Australia, Germany, Italy, Poland, and the United Kingdom from 19 September 2019 to 17 May 2022.

Pre-assignment

Screening details:

A total of 30 subjects were screened, of which 27 subjects were enrolled and randomised to Sequence A or Sequence B in this study.

Period 1

Period 1 title	Treatment Period 1 (Week 1 to Week 16)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Sequence A (IgPro20/IgPro10)

Arm description:

Subjects received IgPro20 of a total dose of 0.5 grams per kilogram (g/kg) over 2 sessions per week as a subcutaneous (SC) injection for up to 16 weeks in Treatment Period 1 followed by IgPro10 of a total dose of 2 g/kg over 2-5 sessions on consecutive days every 4 weeks as an intravenous (IV) infusion for up to 16 weeks in Treatment Period 2.

Arm type	Experimental
Investigational medicinal product name	IgPro20
Investigational medicinal product code	
Other name	Hizentra
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

A total dose of 0.5 g/kg was administered over 2 sessions per week for up to 16 weeks.

Investigational medicinal product name	IgPro10
Investigational medicinal product code	
Other name	Privigen
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

A total dose of 2 g/kg was administered over 2-5 sessions on consecutive days every 4 weeks for up to 16 weeks.

Arm title	Sequence B (IgPro10/IgPro20)
------------------	------------------------------

Arm description:

Subjects received IgPro10 of a total dose of 2 g/kg over 2-5 sessions on consecutive days every 4 weeks as an IV infusion for up to 16 weeks in Treatment Period 1 followed by IgPro20 of a total dose of 0.5 g/kg over 2 sessions per week as a SC injection for up to 16 weeks in Treatment Period 2.

Arm type	Experimental
Investigational medicinal product name	IgPro10
Investigational medicinal product code	
Other name	Privigen
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

A total dose of 2 g/kg was administered over 2-5 sessions on consecutive days every 4 weeks for up to 16 weeks.

Investigational medicinal product name	IgPro20
Investigational medicinal product code	
Other name	Hizentra
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

A total dose of 0.5 g/kg was administered over 2 sessions per week for up to 16 weeks.

Number of subjects in period 1	Sequence A (IgPro20/IgPro10)	Sequence B (IgPro10/IgPro20)
Started	13	14
Completed	12	13
Not completed	1	1
Adverse event	1	-
Withdrawal by subject	-	1

Period 2

Period 2 title	Treatment Period 2 (Week 17 to Week 32)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Sequence A (IgPro20/IgPro10)

Arm description:

Subjects received IgPro20 of a total dose of 0.5 g/kg over 2 sessions per week as a SC injection for up to 16 weeks in Treatment Period 1 followed by IgPro10 of a total dose of 2 g/kg over 2-5 sessions on consecutive days every 4 weeks as an IV infusion for up to 16 weeks in Treatment Period 2.

Arm type	Experimental
Investigational medicinal product name	IgPro20
Investigational medicinal product code	
Other name	Hizentra
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

A total dose of 0.5 g/kg was administered over 2 sessions per week for up to 16 weeks.

Investigational medicinal product name	IgPro10
Investigational medicinal product code	
Other name	Privigen
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

A total dose of 2 g/kg was administered over 2-5 sessions on consecutive days every 4 weeks for up to 16 weeks.

Arm title	Sequence B (IgPro10/IgPro20)
------------------	------------------------------

Arm description:

Subjects received IgPro10 of a total dose of 2 g/kg over 2-5 sessions on consecutive days every 4 weeks as an IV infusion for up to 16 weeks in Treatment Period 1 followed by IgPro20 of a total dose of 0.5 g/kg over 2 sessions per week as a SC injection for up to 16 weeks in Treatment Period 2.

Arm type	Experimental
Investigational medicinal product name	IgPro10
Investigational medicinal product code	
Other name	Privigen
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

A total dose of 2 g/kg was administered over 2-5 sessions on consecutive days every 4 weeks for up to 16 weeks.

Investigational medicinal product name	IgPro20
Investigational medicinal product code	
Other name	Hizentra
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

A total dose of 0.5 g/kg was administered over 2 sessions per week for up to 16 weeks.

Number of subjects in period 2^[1]	Sequence A (IgPro20/IgPro10)	Sequence B (IgPro10/IgPro20)
Started	12	13
Completed	13	12
Not completed	0	1
Adverse event	-	1
Joined	1	0
Transferred in from other group/arm	1	-

Notes:

[1] - The number of subjects transferring in and out of the arms in the period are not the same. It is expected the net number of transfers in and out of the arms in a period, will be zero.

Justification: 13 subjects have started and completed the sequence A in treatment period 2.

Baseline characteristics

Reporting groups

Reporting group title	Sequence A (IgPro20/IgPro10)
Reporting group description: Subjects received IgPro20 of a total dose of 0.5 grams per kilogram (g/kg) over 2 sessions per week as a subcutaneous (SC) injection for up to 16 weeks in Treatment Period 1 followed by IgPro10 of a total dose of 2 g/kg over 2-5 sessions on consecutive days every 4 weeks as an intravenous (IV) infusion for up to 16 weeks in Treatment Period 2.	
Reporting group title	Sequence B (IgPro10/IgPro20)
Reporting group description: Subjects received IgPro10 of a total dose of 2 g/kg over 2-5 sessions on consecutive days every 4 weeks as an IV infusion for up to 16 weeks in Treatment Period 1 followed by IgPro20 of a total dose of 0.5 g/kg over 2 sessions per week as a SC injection for up to 16 weeks in Treatment Period 2.

Primary: Number of Subjects With at Least one Adverse Event (AE) for IgPro20

End point title	Number of Subjects With at Least one Adverse Event (AE) for IgPro20 ^[1]
-----------------	--

End point description:

AE is any untoward medical occurrence in a patient or clinical investigation subject administered with a pharmaceutical product which does not necessarily have a causal relationship with the treatment. An AE can be any unfavorable and unintended sign (including an abnormal, clinically significant laboratory finding), symptom, or disease temporally associated with the use of a medicinal (investigational) product, whether or not considered related to the medicinal (investigational) product. Safety analysis set included all subjects who received at least 1 infusion of IgPro20 or IgPro10. Subjects who received IgPro20 were analysed.

End point type	Primary
----------------	---------

End point timeframe:

From first dose of study drug through last follow-up visit (up to 36 weeks)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only the descriptive analysis was planned to be reported for this endpoint.

ISR rate per infusion = total number of ISRs across all subjects while on IgPro20 / total number of IgPro20 Infusions across all subjects. ISRs included all events reported within the MedDRA high-level terms 'Administration site reactions', 'Infusion site reactions', or 'Injection site reactions'.

Safety analysis set included all subjects who received at least 1 infusion of IgPro20 or IgPro10. Subjects who received IgPro20 and with ISRs were analysed.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
16 July 2019	<ul style="list-style-type: none">• Addition of text regarding identified risk of Thromboembolic events (TEE) in treatment population, including new exclusion criteria, monitoring, and study stopping rules• Expansion of hemolysis testing as a safety assessment during IgPro20 treatment• Clarification of timing for study endpoint measures• Addition of exclusion criterion to address use of contraception by potential male subjects• Addition of exclusion criteria to address subjects with potential risks of TEE• Addition of deoxy ribonucleic acid (DNA) and ribonucleic acid (RNA) as biomarkers and additional collection of whole blood to obtain DNA and RNA• Addition of TEEs as an AESI.
07 November 2019	<ul style="list-style-type: none">• Modification of Primary and Secondary Endpoints to include summaries of TEAEs, SAEs, and AESIs• Addition of rules for stopping infusion of IgPro20 or IgPro10 and discontinuation of treatment• Addition of text and assessments to monitor renal safety• Addition and classification of hemolysis and potential acute renal injury as AESIs• Addition of guidance regarding the maximum infusion rate for subjects with renal dysfunction• Addition of maximum doses of IgPro20 and IgPro10, based on body weight• Removal of DLCO assessment at Baseline• Clarification of the method of scoring for manual muscle testing• Addition of interim analysis.
21 October 2020	<ul style="list-style-type: none">• Defined adjustments that are effective during the Coronavirus disease 2019 (COVID-19) pandemic and provided detailed guidance and procedures that allowed investigators the flexibility to complete critical protocol safety and efficacy assessments while limiting subject exposure to COVID-19 at study sites.
22 February 2021	<ul style="list-style-type: none">• Added guidance regarding dispensing Investigational product (IP) to subjects during a state of emergency or public health crisis• Added an option for remote visits during a state of emergency or public health crisis• Revised contingencies that were effective during a state of emergency or a public health crisis.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
21 April 2020	Due to COVID-19, enrollment was stopped on 1 Apr 2020, with study timelines re-baselining 25 Jun 2020.	25 June 2020

Notes:

Limitations and caveats

None reported
