

## Clinical trial results:

### A Multicenter, Randomized, Double-blind, Placebo-controlled, Parallel-group Study of Guselkumab in Subjects with Active Lupus Nephritis Summary

EudraCT number	2018-003155-38
Trial protocol	PL
Global end of trial date	01 February 2023

#### Results information

Result version number	v1 (current)
This version publication date	17 February 2024
First version publication date	17 February 2024

#### Trial information

##### Trial identification

Sponsor protocol code	CNT01959LUN2001
-----------------------	-----------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT04376827
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Janssen Research & Development, LLC
Sponsor organisation address	920, US Highway, South Raritan, NJ, United States, 08869

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 February 2023
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	01 February 2023
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

The main objective of this trial was to evaluate the efficacy of guselkumab in subjects with active Lupus Nephritis (LN)

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with Good Clinical Practices and applicable regulatory requirements.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	18 November 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 9
Country: Number of subjects enrolled	Mexico: 4
Country: Number of subjects enrolled	Russian Federation: 3
Country: Number of subjects enrolled	Thailand: 1
Country: Number of subjects enrolled	Taiwan: 3
Country: Number of subjects enrolled	Ukraine: 12
Country: Number of subjects enrolled	United States: 1
Worldwide total number of subjects	33
EEA total number of subjects	0

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	32
From 65 to 84 years	1
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

Randomization was stratified by geographic region (North America, Latin America, Asia Pacific and Europe) and Urine Protein to Creatinine Ratio (UPCR) level (less than [ $<$ ] 3 milligrams per milligram [mg/mg] and greater than or equal to [ $\geq$ ] 3 mg/mg).

### Period 1

Period 1 title	Double blind Period: Week 0 to Week 52
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Subject

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo

Arm description:

In double-blind period, subjects received placebo matched to guselkumab (400 milligrams [mg]) intravenous (IV) infusion at Weeks 0, 4 and 8 and placebo matched to guselkumab (200 mg) subcutaneous (SC) injection every 4 weeks (q4w) from Week 12 through Week 48 along with standard-of-care treatment of mycophenolate mofetil (MMF)/mycophenolic acid (MPA) and glucocorticoids. Subjects who achieved complete renal response (CRR) at Week 48 and 52, and completed the Week 52 assessments entered the long-term extension (LTE) phase and continued to receive placebo matched to guselkumab SC injection q4w from Week 52 through Week 84 (that is., up to LTE phase treatment termination).

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

In double-blind period subjects received placebo matched to guselkumab 200 mg SC q4w from Week 12 through Week 48.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

In double-blind period subjects received placebo matched to guselkumab 400 mg IV at Weeks 0, 4 and 8.

<b>Arm title</b>	Guselkumab
------------------	------------

Arm description:

In double-blind period subjects received guselkumab 400 mg IV infusion at Weeks 0, 4 and 8 and guselkumab 200 mg SC injection q4w from Week 12 through Week 48 along with standard-of-care treatment of MMF/MPA and glucocorticoids. Subjects who achieved CRR at Week 48 and 52, and completed the Week 52 assessments entered LTE phase and continued to receive guselkumab 200 mg SC injection q4w from Week 52 through Week 84 (that is., up to LTE phase treatment termination).

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Guselkumab
Investigational medicinal product code	
Other name	CNT01959
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

In double-blind period subjects received guselkumab 400 mg IV infusion at Weeks 0, 4 and 8.

Investigational medicinal product name	Guselkumab
Investigational medicinal product code	
Other name	CNT01959
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

In double-blind period subjects received guselkumab 200 mg SC injection q4w from Week 12 through Week 48.

Number of subjects in period 1	Placebo	Guselkumab
Started	16	17
Completed	9	8
Not completed	7	9
Consent withdrawn by subject	1	1
Study Terminated by Sponsor	6	8

## Period 2

Period 2 title	LTE Phase:Week 52 to 96(LTE termination)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

## Arms

Are arms mutually exclusive?	No
Arm title	Placebo

Arm description:

In double-blind period, subjects received placebo matched to guselkumab (400 milligrams [mg]) intravenous (IV) infusion at Weeks 0, 4 and 8 and placebo matched to guselkumab (200 mg) subcutaneous (SC) injection every 4 weeks (q4w) from Week 12 through Week 48 along with standard-of-care treatment of mycophenolate mofetil (MMF)/mycophenolic acid (MPA) and glucocorticoids. Subjects who achieved complete renal response (CRR) at Week 48 and 52, and completed the Week 52 assessments entered the long-term extension (LTE) phase and continued to receive placebo matched to guselkumab SC injection q4w from Week 52 through Week 84 (that is., up to LTE phase treatment termination).

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Placebo

## End points

### End points reporting groups

Reporting group title	Placebo
-----------------------	---------

#### Reporting group description:

In double-blind period, subjects received placebo matched to guselkumab (400 milligrams [mg]) intravenous (IV) infusion at Weeks 0, 4 and 8 and placebo matched to guselkumab (200 mg) subcutaneous (SC) injection every 4 weeks (q4w) from Week 12 through Week 48 along with standard-of-care treatment of mycophenolate mofetil (MMF)/mycophenolic acid (MPA) and glucocorticoids. Subjects who achieved complete renal response (CRR) at Week 48 and 52, and completed the Week 52 assessments entered the long-term extension (LTE) phase and continued to receive placebo matched to guselkumab SC injection q4w from Week 52 through Week 84 (that is., up to LTE phase treatment termination).

Reporting group title	Guselkumab
-----------------------	------------

#### Reporting group description:

In double-blind period subjects received guselkumab 400 mg IV infusion at Weeks 0, 4 and 8 and guselkumab 200 mg SC injection q4w from Week 12 through Week 48 along with standard-of-care treatment of MMF/MPA and glucocorticoids. Subjects who achieved CRR at Week 48 and 52, and completed the Week 52 assessments entered LTE phase and continued to receive guselkumab 200 mg SC injection q4w from Week 52 through Week 84 (that is., up to LTE phase treatment termination).

Reporting group title	Placebo
-----------------------	---------

#### Reporting group description:

In double-blind period, subjects received placebo matched to guselkumab (400 milligrams [mg]) intravenous (IV) infusion at Weeks 0, 4 and 8 and placebo matched to guselkumab (200 mg) subcutaneous (SC) injection every 4 weeks (q4w) from Week 12 through Week 48 along with standard-of-care treatment of mycophenolate mofetil (MMF)/mycophenolic acid (MPA) and glucocorticoids. Subjects who achieved complete renal response (CRR) at Week 48 and 52, and completed the Week 52 assessments entered the long-term extension (LTE) phase and continued to receive placebo matched to guselkumab SC injection q4w from Week 52 through Week 84 (that is., up to LTE phase treatment termination).

Reporting group title	Guselkumab
-----------------------	------------

#### Reporting group description:

In double-blind period subjects received guselkumab 400 mg IV infusion at Weeks 0, 4 and 8 and guselkumab 200 mg SC injection q4w from Week 12 through Week 48 along with standard-of-care treatment of MMF/MPA and glucocorticoids. Participants who achieved CRR at Week 48 and 52, and completed the Week 52 assessments entered LTE phase and continued to receive guselkumab 200 mg SC injection q4w from Week 52 through Week 84 (that is., up to LTE phase treatment termination).

Subject analysis set title	Guselkumab Vs Placebo
----------------------------	-----------------------

Subject analysis set type	Per protocol
---------------------------	--------------

#### Subject analysis set description:

In double-blind period, placebo arm subjects received placebo matched to guselkumab (400 mg) IV infusion at Weeks 0, 4 and 8 and placebo matched to guselkumab (200 mg) SC injection q4w from Week 12 through Week 48; Guselkumab arm subjects received guselkumab 400 mg IV infusion at Weeks 0, 4 and 8 and guselkumab 200 mg SC injection q4w from Week 12 through Week 48. All (both arms) subjects received standard-of-care treatment of MMF/MPA and glucocorticoids. Subjects who achieved CRR at Weeks 48 and 52, and completed the Week 52 assessments entered the LTE phase. During the LTE phase, subjects received the same treatment, placebo or guselkumab that was assigned at randomization, SC q4w from Week 52 through Week 84 (that is, up to LTE phase treatment termination).

### Primary: Percentage of Subjects Achieving at Least 50 Percent (%) Decrease From Baseline in Proteinuria at Week 24

End point title	Percentage of Subjects Achieving at Least 50 Percent (%) Decrease From Baseline in Proteinuria at Week 24 <sup>[1]</sup>
-----------------	--

#### End point description:

Percentage of subjects achieving at least 50% decrease in proteinuria from baseline at Week 24 was reported. Proteinuria analysis was based on UPCR and was defined as the presence of an excess of serum proteins in the urine, which may be an early sign of kidney disease. Full analysis set (FAS) included all randomised subjects who received at least 1 dose of study intervention.

End point type	Primary
----------------	---------

End point timeframe:

Week 24

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive statistics was done, no inferential statistical analysis was performed.

End point values	Placebo	Guselkumab

Number of subjects analysed	16	17		
Units: percentage of subjects				
number (not applicable)	56.3	35.3		

## Statistical analyses

No statistical analyses for this end point

## Secondary: Time to Achievement of Complete Renal Response

End point title	Time to Achievement of Complete Renal Response
-----------------	--

End point description:

Subject was considered as achieved CRR who did not discontinue study intervention for any reason excluding COVID-19 related discontinuations or met medication intercurrent event (exceeded baseline glucocorticoid dose, increase above 10 mg/d prednisone equivalent after Week 12, use of new or increased dose of concomitant medication related to lupus nephritis (LN) or other immunosuppressive agents, within 8 weeks prior to endpoint time point or initiation of prohibited medications at any time prior to endpoint time point. In below data table, measure type "Number"=hazard ratio and unit of measure is ratio for time to CRR.FAS population. For this endpoint, only summary measure (population-level summary) data were analyzed and reported as planned in study statistical analysis plan. Thus, data were presented for single comparative arm (guselkumab vs placebo). 'N' (number of subjects analysed)=all subjects of both arms with available data for this endpoint.

End point type	Secondary

Units: percentage of subjects				
number (not applicable)	18.8	17.6		

**Statistical analyses**

No statistical analyses for this end point

**Secondary: Time to Treatment Failure (TF)**

End point title	Time to Treatment Failure (TF)
-----------------	--------------------------------

## End point description:

TF:time to first occurrence of TF from baseline. Subject was considered have treatment failure, who did not continue study intervention for any reason excluding COVID-19 related discontinuations or met medication intercurrent event (exceeded baseline glucocorticoid dose, increase above 10 mg/d prednisone equivalent after Week 12, use of new or increased dose of concomitant medication related to LN or other immunosuppressive agents, within 8 weeks prior to endpoint time point or initiation of prohibited medications at any time prior to endpoint time point. In below data table, measure type "Number"= hazard ratio and unit of measure is ratio for time to TF. FAS population. For this endpoint, only summary measure (population-level summary) data were analyzed and reported as planned in study statistical analysis plan. Thus, data were presented for single comparative arm. 'N' (number of subjects analysed) signifies all subjects of both arms with available data for this endpoint.

End point type	Secondary
----------------	-----------

## End point timeframe:

Through Week 52

<b>End point values</b>	Guselkumab Vs Placebo			
Subject group type	Subject analysis set			
Number of subjects analysed	33			
Units: ratio				
number (confidence interval 80%)	1.54 (0.62 to 3.85)			

## Statistical analyses

No statistical analyses for this end point

## Secondary: Serum Concentration of Guselkumab

End point title	Serum Concentration of Guselkumab <sup>[2]</sup>
-----------------	--

End point description:

Serum Concentration of guselkumab were reported. Data for this endpoint was not planned to be collected and analysed for the placebo arm. Pharmacokinetic analysis set included all subjects who received at least 1 administration of guselkumab and had at least one post-dose sample collection. Here (number analysed) signifies number of subjects evaluable at specific timepoints. Since a small number of subjects only entered LTE period than the planned enrollment count, planned serum concentration analysis was not performed for the LTE phase for this endpoint.

End point type	Secondary
----------------	-----------

End point timeframe:

Predose: Weeks 0,4,8,12,16,20,24, 36; Post-dose: Weeks 0 (1 hour after intravenous administration), Day 2, Week 52 and 60

Notes:

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: This endpoint was planned to be reported for specified arms only.

<b>End point values</b>	Guselkumab			
Subject group type	Reporting group			
Number of subjects analysed	16

Units: subjects	1	2		

## Statistical analyses

No statistical analyses for this end point

## Secondary: Number of Subjects with Related AEs

End point title	Number of Subjects with Related AEs
-----------------	-------------------------------------

End point description:

Number of subjects with related AEs were reported. An AE was defined as any untoward medical occurrence in a clinical study subject administered a medicinal (investigational or non-investigational) product did not necessarily have a causal relationship with the treatment. Therefore, it could be any unfavorable and unintended sign (including an abnormal finding), symptom, or disease temporally associated with the use of a medicinal product, whether or not related to that medicinal product. Related AE was defined as the AE assessed by the investigator related to study agent. SAS included all subjects who received at least one dose of study intervention. Since a small number of subjects only entered the LTE phase than the planned enrollment count, no separate adverse events analysis was performed for the LTE phase subjects and thus, data of both DB period and LTE phase were presented together for this endpoint under the arms: placebo and guselkumab.

End point type	Secondary
End point timeframe:	
DB period: From Week 0 up to 12 week safety follow-up (i.e., up to Week 60); LTE phase: From Week 52 up to LTE phase termination (i.e., up to Week 96)	

End point values	Placebo	Guselkumab		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	16	17		
Units: subjects	2	2		

## Statistical analyses

No statistical analyses for this end point

### Secondary: Number of Subjects with Serious Adverse Events (SAEs)

End point title	Number of Subjects with Serious Adverse Events (SAEs)
-----------------	---

End point description:

Number of subjects with AEs were reported. A SAE was defined as any untoward medical occurrence that at any dose resulted in death, was life-threatening, required inpatient hospitalisation or prolongation of existing hospitalisation, resulted in persistent or significant disability/incapacity, was a congenital anomaly/birth defect, was a suspected transmission of any infectious agent via a medicinal product, or was medically important. SAS included all subjects who received at least one dose of study intervention. Since a small number of subjects only entered the LTE phase than the planned enrollment count, no separate adverse events analysis was performed for the LTE phase participants and thus, data of both DB period and LTE phase were presented together for this endpoint under the arms: placebo and guselkumab.

### Secondary: Number of Subjects with Adverse Events (AEs)

End point title	Number of Subjects with Adverse Events (AEs)
-----------------	--

**End point description:**

Number of subjects with AEs were reported. An AE was defined as any untoward medical occurrence in a clinical study subject administered a medicinal (investigational or non-investigational) product did not necessarily have a causal relationship with the treatment. Therefore, it could be any unfavorable and unintended sign (including an abnormal finding), symptom, or disease temporally associated with the use of a medicinal product, whether or not related to that medicinal product. Safety analysis set (SAS) included all subjects who received at least one dose of study intervention. Since a small number of subjects only entered the LTE phase than the planned enrollment count, no separate adverse events analysis was performed for the LTE phase subjects and thus, data of both DB period and LTE phase were presented together for this endpoint under the arms: placebo and guselkumab.

End point type	Secondary
----------------	-----------

**End point timeframe:**

DB period: From Week 0 up to 12 week safety follow-up (i.e., up to Week 60); LTE phase: From Week 52 up to LTE phase termination (i.e., up to Week 96)

### Reporting groups

Reporting group title	Guselkumab
-----------------------	------------

Reporting group description:

In double-blind period subjects received guselkumab 400 mg IV infusion at Weeks 0, 4 and 8 and guselkumab 200 mg SC injection q4w from Week 12 through Week 48 along with standard-of-care treatment of MMF/MPA and glucocorticoids. Subjects who achieved CRR at Week 48 and 52, and completed the Week 52 assessments entered LTE phase and continued to receive guselkumab 200 mg SC injection q4w from Week 52 through Week 84 (that is., up to LTE phase treatment termination).

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

In double-blind period, subjects received placebo matched to guselkumab (400 milligrams [mg]) intravenous (IV) infusion at Weeks 0, 4 and 8 and placebo matched to guselkumab (200 mg) subcutaneous (SC) injection every 4 weeks (q4w) from Week 12 through Week 48 along with standard-of-care treatment of mycophenolate mofetil (MMF)/mycophenolic acid (MPA) and glucocorticoids. Subjects who achieved complete renal response (CRR) at Week 48 and 52, and completed the Week 52 assessments entered the long-term extension (LTE) phase and continued to receive placebo matched to guselkumab SC injection q4w from Week 52 through Week 84 (that is., up to LTE phase treatment termination)

Serious adverse events	Guselkumab	Placebo	
Total subjects affected by serious adverse events

occurrences (all)	0	0	

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
07 May 2020	It was recognized that the Coronavirus Disease 2019 (COVID-19) pandemic may have an impact on the conduct of this clinical study. In alignment with recent health authority guidance, the Sponsor was providing options for study related subject management in the event of COVID-19 related disruption to the conduct of the study.
20 May 2021	Added a LTE to the study for an additional 2 years in order to evaluate long-term efficacy and safety of guselkumab treatment in lupus nephritis. Eligible subjects must have achieved complete renal response (CRR) at Weeks 48 and 52. This amendment also addressed the use of oral contraceptives (using oral contraceptives with a second method of contraception) with concomitant mycophenolate mofetil (MMF)/mycophenolic acid (MPA) due to changes in their label.
29 March 2022	Revised the inclusion and exclusion criteria on the use of glucocorticoids and cyclophosphamide to better align with standard of care treatment for lupus nephritis and to enhance enrollment in the study without affecting the Sponsor's ability to fulfill the objectives of the study. The requirement for collection of plasma biomarkers samples in the long-term extension (LTE) was removed. In addition, Cystatin C testing was now required. Additional changes are also listed in the amendment table below.
24 May 2022	Revised the protocol to reflect the sponsor's decision to stop screening of new subjects and terminate the study early, as a result of enrollment challenges.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to enrollment challenges, Sponsor decided to stop screening of new subjects and stop study early. Since small number of subjects entered LTE phase than planned enrollment, some of planned safety analyses were not performed for LTE phase subjects.

Notes:
