| Date of interim/final analysis                       | 17 February 2023 |
| Is this the analysis of the primary completion data? | No               |

|                                  |                  |
|----------------------------------|------------------|
| Global end of trial reached?     | Yes              |
| Global end of trial date         | 17 February 2023 |
| Was the trial ended prematurely? | Yes              |

Notes:

## General information about the trial

Main objective of the trial:

The main purpose of this study was to evaluate safety and efficacy in subjects treated with concomitant chemoradiation therapy (cCRT) plus M7824 followed by M7824 compared to cCRT plus placebo followed by durvalumab.

Protection of trial subjects:

Subject protection was ensured by following high medical and ethical standards in accordance with the principles laid down in the Declaration of Helsinki, and that are consistent with Good Clinical Practice and applicable regulations.

Background therapy: -

Evidence for comparator: -

### Subjects enrolled per age group

---

|   |    |
|---|----|
| In utero                                  | 0  |
| Preterm newborn - gestational age < 37 wk | 0  |
| Newborns (0-27 days)                      | 0  |
| Infants and toddlers (28 days-23 months)  | 0  |
| Children (2-11 years)                     | 0  |
| Adolescents (12-17 years)                 | 0  |
| Adults (18-64 years)                      | 70 |
| From 65 to 84 years                       | 82 |
| 85 years and over                         | 1  |

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

First subject signed informed consent: 16-Apr-2019, Clinical data cut-off: 21-Jul-2021.

### Period 1

|                              |                                 |
|------------------------------|---------------------------------|
| Period 1 title               | Overall Study (overall period)  |
| Is this the baseline period? | Yes                             |
| Allocation method            | Randomised - controlled         |
| Blinding used                | Double blind                    |
| Roles blinded                | Subject, Investigator, Assessor |

### Arms

|                              |     |
|------------------------------|-----|
| Are arms mutually exclusive? | Yes |
|------------------------------|-----|

|                  |                                   |
|------------------|-----------------------------------|
| <b>Arm title</b> | cCRT plus M7824 followed by M7824 |
|------------------|-----------------------------------|

Arm description:

Subjects received Concomitant Chemoradiotherapy (cCRT): Cisplatin/Etoposide [(50 milligrams per square meter (mg/m<sup>2</sup>) of Cisplatin intravenously on Days 1, 8, 29, and 36 with 50 mg/m<sup>2</sup> intravenously of Etoposide daily on Days 1 to 5 and Days 29 to 33 during cCRT]; Carboplatin/Paclitaxel (carboplatin intravenously based on area under curve (AUC) 2 on Days 1, 8, 15, 22, 29, 36, and 43 with 45 mg/m<sup>2</sup> of Paclitaxel on Days 1, 8, 15, 22, 29, 36, and 43 during cCRT; Cisplatin/Pemetrexed (50 mg/m<sup>2</sup> of Cisplatin intravenously on Days 1, 8, 29, and 36 with 500 mg/m<sup>2</sup> of Pemetrexed intravenously on Days 1, 22, and 43 during cCRT concomitant with Intensity Modulated Radiation Therapy 5 (IMRT 5), fractions per week for about 6 weeks (Total 60 gray [Gy]) in combination with intravenous infusion of 1200 mg of M7824 every 2 weeks (q2w) during cCRT and up to 1 year after cCRT until unacceptable toxicity, confirmed disease progression assessed by investigator.

### Primary: Progression-Free Survival (PFS) According to Response Evaluation Criteria in Solid Tumors (RECIST Version 1.1) Assessed by Investigator

|   |  |
|---|--|
| End point title   | Progression-Free Survival (PFS) According to Response Evaluation Criteria in Solid Tumors (RECIST Version 1.1) Assessed by Investigator <sup>[1]</sup> |
| End point description:  |  |
| PFS was defined as the time from randomization to the date of first documentation of disease progression (PD) or death due to any cause, whichever occurred first. PD: At least a 20 percent (%) increase in the sum of the longest diameter (SLD) taking as reference the smallest SLD recorded from baseline or the appearance of 1 or more new lesions. PFS was analyzed by using the Kaplan-Meier method. Full Analysis Set (FAS) included all subjects who were randomized to study treatment. |  |
| End point type  | Primary  |
| End point timeframe:  |  |
| Time from randomization to the date of first documentation of PD or death, assessed approximately up to 27 months   |  |
| Notes:  |  |
| [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.   |  |
| Justification: Only descriptive statistics was planned for this endpoint.   |  |

## Secondary: Number of Subjects with Treatment-Emergent Adverse Events (TEAEs) and Treatment-Related Adverse Events

|                 |  |
|-----------------|--|
| End point title | Number of Subjects with Treatment-Emergent Adverse Events (TEAEs) and Treatment-Related Adverse Events |
|-----------------|--|

End point description:

Adverse Event (AE) was defined any untoward medical occurrence in a subject administered with a study drug, which does not necessarily have a causal relationship with this treatment. Serious AE was defined AE that resulted in any of the following outcomes: death; life threatening; persistent/significant disability/incapacity; initial/prolonged inpatient hospitalization; congenital anomaly/birth defect. TEAEs: TEAEs was defined as events with onset date or worsening during the on-treatment period. TEAEs included serious AEs and non-serious AEs. Treatment-related TEAEs: reasonably related to the study intervention. Safety (SAF) Analysis Set included all subjects who were administered any dose of any study intervention.

[9] - Data was not collected and analyzed.

### Statistical analyses

No statistical analyses for this end point

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Time from randomization up to data cut off (assessed up to 27 months)

Adverse event reporting additional description:

Safety (SAF) Analysis Set included all participants who were administered any dose of any study intervention.

### Reporting groups

|                       |  |
|-----------------------|--|
| Reporting group title | cCRT plus Placebo followed by Durvalumab |
|-----------------------|--|

Reporting group description:

Subjects received cCRT: Cisplatin/Etoposide [(50 mg/m<sup>2</sup>) of Cisplatin intravenously on Days 1, 8, 29, and 36 with 50 mg/m<sup>2</sup> intravenously of Etoposide daily on Days 1 to 5 and Days 29 to 33 during cCRT]; Carboplatin/Paclitaxel, carboplatin intravenously based on AUC 2 on Days 1, 8, 15, 22, 29, 36, and 43 with 45 mg/m<sup>2</sup> of Paclitaxel on Days 1, 8, 15, 22, 29, 36, and 43 during cCRT; Cisplatin/Pemetrexed, 50 mg/m<sup>2</sup> of Cisplatin intravenously on Days 1, 8, 29, and 36 with 500 mg/m<sup>2</sup> of Pemetrexed intravenously on Days 1, 22, and 43 during cCRT concomitant with IMRT 5, Total 60 Gy in combination with intravenous infusion of placebo matched to M7824 over 1 hour Q2W during cCRT followed by intravenous infusion of durvalumab 10 milligram per kilogram (mg/Kg) Q2W up to 1 year after cCRT until unacceptable toxicity, confirmed disease progression assessed by investigator.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

| Date          | Amendment  |
|---------------|--|
| 05 March 2019 | <ul style="list-style-type: none"><li>• To include Programmed death-ligand 1 (PD-L1) expression in tumor cells as stratification factor in the expansion part of the study.</li><li>• To include information regarding PD-L1 tumor expression and clarify inclusion criteria.</li><li>• To add details on planned tests for overall survival analyses.</li></ul>   |
| 05 July 2019  | <ul style="list-style-type: none"><li>• To provide detailed information regarding the Independent Data Monitoring Committee (IDMC) safety reviews.</li><li>• To add evaluation of a potential biomarker.</li><li>• To clarify that bone palliative radiotherapy `is allowed during the study.</li><li>• To exclude participants with history of bleeding diatheses or recent major bleeding events.</li><li>• To specify the sequence of treatment administration when the radiotherapy is delivered at a separate location.</li></ul> |
| 22 June 2021  | <ul style="list-style-type: none"><li>• To reduce the sample size from 350 subjects to approximately 160 subjects to provide an earlier result from the primary analysis to give insight into the potential benefit of M7824 in subjects with unresectable Stage III NSCLC.</li><li>• To update the risk classification and minimization measures.</li></ul>   |

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
