Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-002269-PIP01-17
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	28 February 2025
Is this the analysis of the primary completion data?	Yes
Primary completion date	04 February 2025
Global end of trial reached?	Yes
Global end of trial date	04 February 2025
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To describe the safety and tolerability of olaparib monotherapy and identify the recommended phase II dose (RP2D) of olaparib in the paediatric population.

Protection of trial subjects:

This study was performed in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with ICH/GCP, applicable regulatory requirements, and the AstraZeneca policy on Bioethics.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	14 January 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Denmark: 1
Country: Number of subjects enrolled	France: 2
Country: Number of subjects enrolled	Germany: 2
Country: Number of subjects enrolled	Korea, Republic of: 8
Country: Number of subjects enrolled	Spain: 3
Worldwide total number of subjects	16
EEA total number of subjects	8

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	3
Adolescents (12-17 years)	13
Adults (18-64 years)	0

From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study had 2 phases: dose-finding and signal identification.

Dose-finding included those with homologous recombination repair (HRR) deficiency per local test.

Signal identification included those with deleterious/suspected HRR gene mutations or by central germline breast cancer susceptibility gene (BRCA) test and needed to receive the RP2D.

Pre-assignment

Screening details:

Dose-finding phase included 13 participants (Cohort A: 10 participants aged ≥ 12 to < 18 ; Cohort B: 3 participants aged ≥ 3 to < 12). Signal identification phase included 5 participants, 3 from the dose-finding phase (2 from Cohort A, 1 from Cohort B).

1 additional participant was not evaluable but was counted in the overall total.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	No
Arm title	Cohort A (Dose Finding phase)

Arm description:

Participants with HRR deficiency aged ≥ 12 to < 18 years

Arm type	Experimental
Investigational medicinal product name	Olaparib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Up to 300 mg received as a single dose on Day 1, followed by initiation of twice daily continuous dosing from Day 2 onwards taken at the same time each day (morning and evening), approximately 12 hours apart.

Arm title	Cohort B (Dose-finding phase)
------------------	-------------------------------

Arm description:

Participants with HRR deficiency aged ≥ 3 to < 12 years

Arm type	Experimental
Investigational medicinal product name	Olaparib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Up to 200 mg received as a single dose on Day 1, followed by initiation of twice daily continuous dosing from Day 2 onwards taken at the same time each day (morning and evening), approximately 12 hours apart.

Arm title	Signal identification phase
------------------	-----------------------------

Arm description:

Participants with a confirmed HRR gene mutation, including participants from the dose-finding phase, and needed to receive the RP2D

Arm type	Experimental
Investigational medicinal product name	Olaparib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

200 mg (for participants aged 6-11) and 300 mg (for participants aged 12-17) received as a single dose on Day 1, followed by initiation of twice daily continuous dosing from Day 2 onwards taken at the same time each day (morning and evening), approximately 12 hours apart.

Arm title	Overall Total
------------------	---------------

Arm description:

Participants in the dose-finding and signal identification phases, including any patients who entered the signal identification phase but were not evaluable for analysis (ie, did not have an HRR gene mutation confirmed via central testing)

Arm type	Experimental
Investigational medicinal product name	Olaparib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Refer to dosage and administration details provided for Cohorts A, B, and Signal Identification Phase.

Number of subjects in period 1	Cohort A (Dose Finding phase)	Cohort B (Dose-finding phase)	Signal identification phase
Started	10	3	5
Completed	0	0	0

Units: Subjects			
Not Hispanic or Latino	16	32	

End points

End points reporting groups

Reporting group title	Cohort A (Dose Finding phase)
Reporting group description: Participants with HRR deficiency aged ≥ 12 to < 18 years	
Reporting group title	Cohort B (Dose-finding phase)
Reporting group description: Participants with HRR deficiency aged ≥ 3 to < 12 years	
Reporting group title	Signal identification phase
Reporting group description: Participants with a confirmed HRR gene mutation, including participants from the dose-finding phase, and needed to receive the RP2D	
Reporting group title	Overall Total
Reporting group description: Participants in the dose-finding and signal identification phases, including any patients who entered the signal identification phase but were not evaluable for analysis (ie, did not have an HRR gene mutation confirmed via central testing)	

Primary: Dose-limiting toxicity (DLT) events

End point title	Dose-limiting toxicity (DLT) events ^{[1][2]}
End point description: To describe the safety and tolerability of olaparib monotherapy. The number of participants who experienced DLTs are presented.	
End point type	Primary
End point timeframe: 1 cycle of 28 days of therapy	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: There was no formal statistical analysis of safety and tolerability data or efficacy data in this study. Demographic and other baseline disease characteristics, concomitant medication, dosing, exposure, safety, tolerability, dose limiting toxicities, efficacy data, and protocol deviations were listed and summarised by cohort and overall in the dose-finding phase, overall in the signal identification phase and in the total study, as appropriate.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: There was no formal statistical analysis of safety and tolerability data or efficacy data in this study. Demographic and other baseline disease characteristics, concomitant medication, dosing, exposure, safety, tolerability, dose limiting toxicities, efficacy data, and protocol deviations were listed and summarised by cohort and overall in the dose-finding phase, overall in the signal identification phase and in the total study, as appropriate.

End point values	Cohort A (Dose Finding phase)	Cohort B (Dose-finding phase)		
Subject group type	Reporting group	Reporting group

End point description:

To describe the paediatric PK profile and to identify the adult equivalent (300 mg bd tablet) dose based upon PK modelling.

The median AUC (0-t) on Day 1 and Day 8 is presented. No plasma samples were collected for participants in Cohort A on Day 1.

AUC (0-t) = area under the curve from zero up to time t

End point type	Secondary
----------------	-----------

End point timeframe:

Day 1 to Day 8

Notes:

[14] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: There was no formal statistical analysis of safety and tolerability data or efficacy data in this study. Demographic and other baseline disease characteristics, concomitant medication, dosing, exposure, safety, tolerability, dose limiting toxicities, efficacy data, and protocol deviations were listed and summarised by cohort and overall in the dose-finding phase, overall in the signal identification phase and in the total study, as appropriate.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

AEs will be collected from time of signature of ICF throughout the treatment period and including the 30-day follow-up period.

Adverse event reporting additional description:

Includes AEs with an onset date or that worsen on or after the first dose of study treatment up to (and including) 30 days after the last dose date or until the initiation of the first subsequent anti-cancer therapy, whichever occurs first.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
12 November 2019	Febrile neutropenia of CTCAE ≥ 3 is considered a standard definition for a DLT in Phase I dose-finding studies where defining safety and tolerability is a primary objective.
18 May 2020	The primary reason for this protocol amendment was to permit patients with primary CNS tumours entry into the study. In addition, revisions were made in response to questions from the Health Authorities, to align with current practice and to clarify procedures.
30 September 2021	The primary reasons for this protocol amendment were to include details for the AAF and to include saliva sampling for PK analysis. In addition, revisions were made to clarify procedures based on Health Authority feedback. Furthermore, additional study mitigation language was added to provide sites with measures that could be implemented during the COVID-19 pandemic.
21 May 2024	The primary reasons for this protocol amendment were to prepare for the transition to European Union Clinical Trial Regulation.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Study was terminated on 29 January 2025 due to operational futility per CSP criteria (<5 participants/year with HRR mutations). Last patient last visit (LPLV) occurred on 04 February 2025; all data were analyzed using a DCO date of 28 February 2025.

Notes:
