Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	20 April 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	13 March 2020
Global end of trial reached?	Yes
Global end of trial date	13 March 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

This was a Phase-2, multicentre, double-blind, placebo-controlled 16-week study.

The primary objective of this study was to evaluate the efficacy of JTE-451 administered for 16 weeks in subjects with moderate to severe plaque psoriasis compared with placebo.

The secondary objectives of the study were to evaluate the safety, tolerability and pharmacokinetics (PK) of JTE-451 administered for 16 weeks in subjects with moderate to severe plaque psoriasis.

Protection of trial subjects:

The study was conducted in compliance with the protocol, Good Clinical Practice and applicable regulatory requirement(s) (e.g., 21 Code of Federal Regulations Parts 50, 56, 312 in the United States), Sponsor/designee policies and procedures, and all applicable local and national clinical trial regulations.

From a safety perspective, appropriate study restrictions based on the mechanism of action (MOA) of JTE-451 (i.e., selective immunomodulatory effect) were implemented including screening procedures and exclusion criteria to mitigate and minimise the risk of infections as well as tuberculosis and viral infections were included to ensure the safety of subjects. Each subject signed an informed consent form (ICF) containing appropriate trial and study drug information and was provided a copy of the ICF.

The subjects at high risk of developing immunosuppression-related adverse events (AEs), such as infections or malignancies, including those with pre-existing conditions (e.g., clinically-manifested or active tubercle bacillus (TB)/untreated latent TB, active infections with hepatitis B virus, hepatitis C virus or human immunodeficiency virus or significant haematological condition were excluded from participating in the study. Other general safety-related restrictions such as cardiovascular-system-related, hepatic, and renal function-related restrictions, as well as the known safety signals associated with other compounds with similar MOA, were implemented to monitor and adequately manage safety-related findings.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	17 January 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 124
Country: Number of subjects enrolled	United States: 15
Country: Number of subjects enrolled	Canada: 13

Worldwide total number of subjects	152
EEA total number of subjects	124

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	139
From 65 to 84 years	13
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Eligible subjects were randomised at Visit 2 to receive JTE-451 200 mg twice daily (BID; 400 mg/day), 400 mg BID (800 mg/day), or placebo BID for 16 weeks. Randomisation was stratified based on prior exposure of subjects to biologic therapy (biologic-naïve versus [vs.] biologic-experienced) and body weight (<90 kg vs. ≥90 kg at Visit 2).

Pre-assignment

Screening details:

Study duration was approximately 24 weeks per subject as follows:

- Screening period: Day -28 (Visit 1) to Day 1 (Visit 2/Randomisation Visit)
- 16-week double-blind treatment period: Day 1 (Visit 2) to Day 112±4 (Visit 7/Week 16)
- Up to 4-week follow-up period: Day 112±4 (Visit 7/Week 16) to Day 140±4 (Visit 8/Week 20)

Period 1

Period 1 title	Treatment Period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

The treatment assigned to each subject was not disclosed to the Sponsor members or designees involved in the study, study staff at the site or to the subject. JTE-451 200 mg tablets as well as placebo tablets were supplied as unbranded tablets, which were identical in appearance.

Arms

Are arms mutually exclusive?	Yes
Arm title	JTE-451 200 mg BID

Arm description:

The subjects received a total daily dose of 400 mg of JTE-451.

Arm type	Experimental
Investigational medicinal product name	JTE-451 200 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

During the treatment period, the subjects self-administered 2 oral doses (2 tablets [1 tablet of JTE-451 200 mg and 1 placebo tablet]/dose, BID at approximately 12-hour intervals, regardless of meals) on Day 1 and daily up to Week 16.

Each JTE-451 tablet contained 200 mg of JTE-451 and inactive ingredients. Each placebo tablet contained the same inactive ingredients as JTE-451 200 mg tablet except the active drug (JTE-451).

Arm title	JTE-451 400 mg BID
------------------	--------------------

Arm description:

The subjects received a total daily dose of 800 mg of JTE-451.

Arm type	Experimental
Investigational medicinal product name	JTE-451 200 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

During the treatment period, the subjects self-administered 2 oral doses (2 tablets of JTE-451 200 mg/dose, BID at approximately 12-hour intervals, regardless of meals) on Day 1 and daily up to Week 16.

Each JTE-451 tablet contained 200 mg of JTE-451 and inactive ingredients.

Arm title	Placebo
Arm description: The subjects received a placebo-treatment.	
Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

During the treatment period, the subjects self-administered 2 oral doses (2 placebo tablets/dose, BID at approximately 12-hour intervals, regardless of meals) on Day 1 and daily up to Week 16.

Each placebo tablet contained the same inactive ingredients as JTE-451 200 mg tablet except the active drug (JTE-451).

Primary: Proportion of subjects who achieved psoriasis area and severity index (PASI)-75 response rate at end of treatment (EOT) in the ITT population

End point title	Proportion of subjects who achieved psoriasis area and severity index (PASI)-75 response rate at end of treatment (EOT) in the ITT population
End point description: The PASI quantifies the severity of a subject's psoriasis based on both, "lesion severity" and the "percent of body surface area (BSA)" affected. PASI is a composite scoring by the investigator of degree of erythema, induration, and scaling (each scored separately) for each of 4 body regions (head and neck, upper limbs, trunk [including axillae and groin], and lower limbs [including buttocks]), with adjustment for the percent of BSA involved for each body region and for the proportion of the body region to the whole body. The PASI score can vary in increments of 0.1 and range from 0.0 to 72.0, with higher scores representing greater severity of psoriasis. PASI-75 response rate was defined as at least 75 percent (%) reduction in PASI score relative to Baseline.

Secondary: Change from baseline in Skindex-16 Emotions Scale Scores at EOT in the ITT population

End point title	Change from baseline in Skindex-16 Emotions Scale Scores at EOT in the ITT population
-----------------	---

End point description:

Skindex-16 questionnaire contains 16 questions related to quality of life in subjects with skin disease. It consists of a short 16-item assessment completed by the subject, with each item rated on a 7-point Likert scale (0=never bothered to 6=always bothered). Responses to the Skindex-16 are categorised into three subscales: symptom, emotional, and functional; and their respective scores are expressed in a linear scale from 0 (no effect) to 100 (effect experienced all the time). Emotions scale score is an average of items 5 to 11.

Secondary: Change from baseline in weekly average of Itch Numeric Rating Scale (NRS) at EOT in the ITT population

End point title	Change from baseline in weekly average of Itch Numeric Rating Scale (NRS) at EOT in the ITT population
-----------------	--

End point description:

The Itch NRS is a validated, self-reported, instrument for measurement of itch intensity and subjects were asked to rate the intensity of their itch on an 11-point scale ranging from 0 (no itch) to 10 (worst itch imaginable); higher scores indicated greater itch intensity. The Itch NRS scores were recorded by the subject using the e-diary once daily from screening through the last visit.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

AEs occurring (initial occurrence or a worsening of a pre-existing condition) after the informed consent was signed and up to 4 weeks (28 days) after the last dose of study treatment were reported.

Adverse event reporting additional description:

The treatment-emergent AEs (AEs that occurred during the treatment period or the follow-up period) are presented here for the safety population.

The safety population consisted of the randomised subjects who received at least one dose of the study treatment.

Assessment type	Systematic

Reporting groups

Reporting group title	JTE-451 200 mg BID
-----------------------	--------------------

Reporting group description:

The subjects received a total daily dose of 400 mg of JTE-451.

Reporting group title	JTE-451 400 mg BID
-----------------------	--------------------

Reporting group description:

The subjects received a total daily dose of 800 mg of JTE-451.

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

The subjects received a placebo-treatment.
