Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No	No

1901/2006 apply to this trial?

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	06 April 2022
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	06 April 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Part A (dose optimisation)- To determine the recommended phase 2 dose (RP2D) taking into account dose-limiting toxicity (DLT/s) in Cycle 1, overall safety/tolerability and pharmacokinetic (PK), by optimizing doses of Debio 1143 when combined with the standard dose of nivolumab, as well as treatment compliance in subjects with advanced solid malignancies who failed prior systemic standard treatments.

Part B (basket trial)- To evaluate the preliminary antitumor activity of Debio 1143 at the RP2D in combination with nivolumab, overall and in each cohort.

Protection of trial subjects:

Written approval of the study protocol and the informed consent was obtained from the independent ethics committee (IEC), prior to initiation of the study. The study was conducted in accordance with local regulations, Good Clinical Practice (GCP), International Council for Harmonisation (ICH) notes for GCP (ICH/CPMP/135/95), and ethical principles that have their origin in the Declaration of Helsinki and its amendments.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	26 April 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 26
Country: Number of subjects enrolled	France: 11
Country: Number of subjects enrolled	United States: 9
Worldwide total number of subjects	46
EEA total number of subjects	37

Notes:

Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	23
From 65 to 84 years	23
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Subjects took part at 24 investigational sites in the United States, Spain, and France from 26 April 2019 to 6 April 2022.

Pre-assignment

Screening details:

A total of 46 subjects were enrolled in this study, 11 subjects with advanced solid malignancies into Part A of study who failed prior systemic standard treatments and 35 subjects into Part B of the study. Part B of the study was started after the completion of Part A and did not include any subjects from Part A.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Part A: Debio 1143 150 mg + Nivolumab

Arm description:

Subjects received Debio 1143, 150 milligrams (mg) capsules, orally once on Days 1 to 10 and Days 15 to 24 of each 28-day treatment cycle along with nivolumab 240 mg, intravenous (IV) infusion over 30 minutes on Days 1 and 15 of each 28-day treatment cycle allowed for a maximum of 26 cycles.

Arm type	Experimental
Investigational medicinal product name	Debio 1143
Investigational medicinal product code	
Other name	Xevinapant
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

150 mg administered once on Days 1 to 10 and Days 15 to 24 of each 28-day treatment cycle allowed for a maximum of 26 cycles.

Investigational medicinal product name	Nivolumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

240 mg administered once on Days 1 and 15 of each 28-day treatment cycle allowed for a maximum of 26 cycles.

Arm title	Part A: Debio 1143 200 mg + Nivolumab
------------------	---------------------------------------

Arm description:

Subjects received Debio 1143, 200 mg capsules, orally once on Days 1 to 10 and Days 15 to 24 of each 28-day treatment cycle along with nivolumab 240 mg, IV infusion over 30 minutes on Days 1 and 15 of each 28-day treatment cycle allowed for a maximum of 26 cycles.

Arm type	Experimental
Investigational medicinal product name	Debio 1143
Investigational medicinal product code	
Other name	Xevinapant
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

200 mg administered once on Days 1 to 10 and Days 15 to 24 of each 28-day treatment cycle allowed for a maximum of 26 cycles.

Investigational medicinal product name	Nivolumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

240 mg administered once on Days 1 and 15 of each 28-day treatment cycle allowed for a maximum of 26 cycles.

Arm title	Part B: Cohort 1 (SCLC): Debio 1143 200 mg + Nivolumab
------------------	--

Arm description:

Subjects with small-cell lung cancer (SCLC) received Debio 1143, 200 mg capsules, orally once on Days 1 to 28 in each 28-day treatment cycle along with nivolumab 240 mg, IV infusion on Days 1 and 15 of each 28-day treatment cycle allowed for a maximum of 26 cycles.

Arm type	Experimental
Investigational medicinal product name	Debio 1143
Investigational medicinal product code	
Other name	Xevinapant
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

200 mg administered once on Days 1 to 28 in each 28-day treatment cycle allowed for a maximum of 26 cycles.

Investigational medicinal product name	Nivolumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

240 mg administered once on Days 1 and 15 of each 28-day treatment cycle allowed for a maximum of 26 cycles.

Arm title	Part B: Cohort 2 (SCCHN): Debio 1143 200 mg + Nivolumab
------------------	---

Arm description:

Subjects with squamous cell carcinoma of the head and neck (SCCHN) received Debio 1143, 200 mg capsules, orally once on Days 1 to 28 in each 28-day treatment cycle along with nivolumab 240 mg, IV infusion on Days 1 and 15 of each 28-day treatment cycle allowed for a maximum of 26 cycles.

Arm type	Experimental
Investigational medicinal product name	Debio 1143
Investigational medicinal product code	
Other name	Xevinapant
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

200 mg administered once on Days 1 to 28 in each 28-day treatment cycle allowed for a maximum of 26 cycles.

Investigational medicinal product name	Nivolumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

240 mg administered once on Days 1 and 15 of each 28-day treatment cycle allowed for a maximum of

26 cycles.

Arm title	Part B: Cohort 3 (GI Cancers): Debio 1143 200 mg + Nivolumab
------------------	--

Arm description:

Subjects with gastrointestinal (GI) cancers received Debio 1143, 200 mg capsules orally once on Days 1 to 28 in each 28-day treatment cycle along with nivolumab 240 mg, IV infusion on Days 1 and 15 of each 28-day treatment cycle allowed for a maximum of 26 cycles.

Arm type	Experimental
Investigational medicinal product name	Debio 1143
Investigational medicinal product code	
Other name	Xevinapant
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

200 mg administered once on Days 1 to 28 in each 28-day treatment cycle allowed for a maximum of 26 cycles.

Investigational medicinal product name	Nivolumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

240 mg administered once on Days 1 and 15 of each 28-day treatment cycle allowed for a maximum of 26 cycles.

Arm title	PartB:Cohort4(Gynaecologic Cancers):Debio1143 200 mg+Nivolumab
------------------	--

Arm description:

Subjects with gynaecologic cancers received Debio 1143, 200 mg capsules, orally once on Days 1 to 28 in each 28-day treatment cycle along with nivolumab 240 mg, IV infusion on Days 1 and 15 of each 28-day treatment cycle allowed for a maximum of 26 cycles.

Arm type	Experimental
Investigational medicinal product name	Debio 1143
Investigational medicinal product code	
Other name	Xevinapant
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

200 mg administered once on Days 1 to 28 in each 28-day treatment cycle allowed for a maximum of 26 cycles.

Investigational medicinal product name	Nivolumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

240 mg administered once on Days 1 and 15 of each 28-day treatment cycle allowed for a maximum of 26 cycles.

Primary: Part B: Confirmed Objective Response Rate (ORR)

End point title	Part B: Confirmed Objective Response Rate (ORR) ^{[3][4]}
-----------------	---

End point description:

ORR was determined per response evaluation criteria in solid tumors (RECIST) v1.1 and/or gynaecologic cancer intergroup (GCIG) criteria (for Cohort 4). ORR was calculated as the percentage of subjects with a confirmed objective response. A confirmed objective response was derived as any partial response (PR) or complete response (CR) recorded after the start of study treatment until disease progression/recurrence was documented, a new systemic anti-cancer therapy was started or analysis cut-off, whichever occurred first. CR is defined by the disappearance of all target lesions and reduction of any pathological lymph nodes in short axis to <10 millimetres (mm). PR is defined by at least a 30% decrease in the sum of diameters of target lesions taking as reference the baseline sum diameter. Safety analysis set included all enrolled subjects who received at least one dose of any study drug in Part B.

End point type	Primary
----------------	---------

End point timeframe:

Part B: From the start of study treatment until disease progression/recurrence was documented, a new systemic anti-cancer therapy was started or analysis cut-off, whichever occurred first (up to approximately 2.05 years)

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive statistical analysis was planned to be reported for this endpoint.

[4] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint was applicable only for Part B arm groups of the study.

End point values	Part B: Cohort 1 (SCLC): Debio 1143 200 mg + Nivolumab	Part B: Cohort 2 (SCCHN): Debio 1143 200 mg + Nivolumab	Part B: Cohort 3 (GI Cancers): Debio 1143 200 mg + Nivolumab	PartB:Cohort4(Gynaecologic Cancers):Debio 1143 200 mg+Nivolumab

Secondary: Part A: Confirmed Objective Response Rate (ORR)

End point title	Part A: Confirmed Objective Response Rate (ORR) ^[5]
-----------------	--

End point description:

ORR was determined per RECIST v1.1. ORR was calculated as the percentage of subjects with a confirmed objective response. A confirmed objective response is a confirmed best overall response of PR or CR recorded after the start of study treatment until disease progression/recurrence was documented, a new systemic anti-cancer therapy was started or analysis cut-off, whichever occurred first. CR is defined by the disappearance of all target lesions and reduction of any pathological lymph nodes in short axis to <10 mm. PR is defined by at least a 30% decrease in the sum of diameters of target lesions taking as reference the baseline sum diameter. Safety analysis set included all enrolled subjects who received at least one dose of any study drug in Part A.

End point type	Secondary

Secondary: Part A: Serum Trough Concentration of Nivolumab

End point title | Part A: Serum Trough Concentration of Nivolumab^[17]

End point description:

Safety analysis set included all enrolled subjects who received at least one dose of any study drug of Part A. Number of subjects analysed indicates number of subjects available for analysis. Number analysed (n) indicates the number of subjects with available data for analysis at the given timepoint. 9999= the standard deviation cannot be calculated for 1 subject. 0.000=Data is not available as zero subjects were analysed at the given timepoint.

End point type | Secondary

End point timeframe:

Cycle 1: predose, 1.5, 8 hours post-dose on Day 15; Cycle 3: predose, 0.5, 1.5, 8 hours post-dose on Day 1 and predose, 1.5 hours post-dose on Day 15 (each cycle = 28 days)

Notes:

[17] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint was applicable only for Part A arm groups of the study.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From after the first study drug administration and up to 5 months after last nivolumab infusion, or the earliest date of new anticancer therapy -1 day, whichever occurs first (up to approximately 2.08 years in Part A and 2.05 years in Part B)

Adverse event reporting additional description:

Safety analysis set included all enrolled subjects who received at least one dose of any study drug.

Assessment type	Systematic

Reporting groups

Reporting group title	Part A: Debio 1143 150 mg + Nivolumab
-----------------------	---------------------------------------

Reporting group description:

Subjects received Debio 1143, 150 milligrams (mg) capsules, orally once on Days 1 to 10 and Days 15 to 24 of each 28-day treatment cycle along with nivolumab 240 mg, intravenous (IV) infusion over 30 minutes on Days 1 and 15 of each 28-day treatment cycle allowed for a maximum of 26 cycles.

Reporting group title	Part A: Debio 1143 200 mg + Nivolumab
-----------------------	---------------------------------------

Reporting group description:

Subjects received Debio 1143, 200 mg capsules, orally once on Days 1 to 10 and Days 15 to 24 of each 28-day treatment cycle along with nivolumab 240 mg, IV infusion on Days 1 and 15 of each 28-day treatment cycle allowed for a maximum of 26 cycles.

Reporting group title	Part B: Cohort 1 (SCLC): Debio 1143 200 mg + Nivolumab
-----------------------	--

Reporting group description:

Subjects with small-cell lung cancer (SCLC) received Debio 1143, 200 mg capsules, orally once on Days 1 to 28 in each 28-day treatment cycle along with nivolumab 240 mg, IV infusion on Days 1 and 15 of each 28-day treatment cycle allowed for a maximum of 26 cycles.

Reporting group title	Part B: Cohort 2 (SCCHN): Debio 1143 200 mg + Nivolumab
-----------------------	---

Reporting group description:

Subjects with squamous cell carcinoma of the head and neck (SCCHN) received Debio 1143, 200mg capsules, orally once on Days 1 to 28 in each 28-day treatment cycle along with nivolumab, 240mg, IV infusion on Days 1 and 15 of each 28-day treatment cycle allowed for a maximum of 26 cycles.

Reporting group title	Part B: Cohort 3 (GI Cancers): Debio 1143 200 mg + Nivolumab
-----------------------	--

Reporting group description:

Subjects with gastrointestinal (GI) cancers received Debio 1143, 200mg capsules, orally once on Days 1 to 28 in each 28-day treatment cycle along with nivolumab 240mg, IV infusion on Days 1 and 15 of each 28-day treatment cycle allowed for a maximum of 26 cycles.

Reporting group title	Part B: Cohort 4 (Gynaecologic Cancers): Debio 1143 200mg + Nivolumab
-----------------------	---

Reporting group description:

Subjects with gynaecologic cancers received Debio 1143, 200 mg capsules, orally once on Days 1 to 28 in each 28-day treatment cycle along with nivolumab 240 mg, IV infusion on Days 1 and 15 of each 28-day treatment cycle allowed for a maximum of 26 cycles.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
14 January 2019	<ul style="list-style-type: none">• Added that the subjects should have had no established standard therapeutic alternatives to the cancer treatment.• Advised that subjects with active ongoing infection requiring systemic antibiotic therapy, including active tuberculosis, were not eligible for enrolment.• Changed the duration of safety follow-up, TEAE monitoring, and SAE reporting period for withdrawn subjects to 5 months (previously, 90 days) after the last nivolumab infusion.• Expanded the list of prohibited medications.
07 November 2019	<ul style="list-style-type: none">• Allowed the inclusion of subjects with haemoglobin levels of ≥ 9.0 grams/decilitre (g/dL).• Adjusted the subject population for Cohort 1 to allow the inclusion of subjects with extrapulmonary small-cell carcinomas or large cell neuroendocrine lung carcinoma.• Clarified that nasopharyngeal carcinoma was not allowed in Cohort 2.• Shortened the time window of thoracic or head and neck radiation >30 Gray (Gy) from within 3 months to 6 weeks prior to the start of treatment.• Allowed inclusion of subjects with vitiligo $>$Grade 1 as an ongoing toxicity of prior antineoplastic therapies.• Shortened the time window for blood transfusion from up to 4 weeks to 2 weeks prior to the start of treatment.
03 April 2020	<ul style="list-style-type: none">• Added the clarification of the study treatment duration and the conditions under which treatment duration could be prolonged by 1 year for subjects who exceptionally continued study treatment beyond 13 cycles.• Added the clarification of the schedule of assessments for subjects who exceptionally continued study treatment beyond 13 cycles.• Added the clarification that the final analysis would be conducted 18 months after the last subject was included in the study (LPI) or 60 days from last subject last visit (LPLV), whichever occurs first.• Updated the inclusion criteria to align the washout period of previous investigational monoclonal antibodies (mAbs) to 4 weeks or at least the duration of 1 treatment cycle whichever is the longest to prevent a potential carry-over effect.• Updated language for prohibited concomitant medication for strong P-glycoprotein (P-gp) inhibitors/inducers and cytochrome P450 (CYP) 3A substrates. CYP 2B6 and 1A2 substrates were added as drugs to be used with caution and closely monitored based on new data. In addition, drugs with a known risk of QTc prolongation were added as medications to be used with caution. Furthermore, language on possible drug-drug interaction (DDI) concerning hormonal contraception was corrected.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
