Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	20 July 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	20 July 2021
Global end of trial reached?	Yes
Global end of trial date	20 July 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

This is a randomized, double-blind, placebo-controlled, multicenter, parallel group study to compare 2 dose levels of budesonide/albuterol BDA MDI (PT027) to its components budesonide BD MDI (PT008) and albuterol AS MDI (PT007) on improvement in lung function and asthma symptoms after 12 weeks of treatment in adult, adolescent, and child subjects with symptomatic asthma currently being treated with a short/rapid-acting β 2-adrenoreceptor agonist (SABA) as needed alone or with low-dose inhaled corticosteroid (ICS) maintenance therapy plus SABA as needed.

Protection of trial subjects:

The final protocol, informed consent form (ICF) and other written materials provided to patients were submitted to and approved by an Ethics Committee (EC). The investigator at each study centre ensured that the distribution of these documents to the applicable EC and to the study site staff.

An Independent data monitoring committee (IDMC) was established to assess the ongoing safety of the study. The IDMC reviewed blinded data (open session) and unblinded safety data (closed session) quarterly to assess any safety related reasons why the study should continue, be modified, or stopped. The IDMC chair and all committee members were independent investigators/specialists separate from the study team or contract research organization.

Electronic diary alerted patients, investigator site and the Sponsor's medical monitoring team when the patient's symptoms and/or Ventolin prn use had increased and/or PEF decreased over 2 days in order to initiate contact between the patient and the investigator site to determine the well-being of the patient. Patients were advised to contact the investigator if their symptoms necessitated more than 8 puffs in a day.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	20 March 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 522
Country: Number of subjects enrolled	Ukraine: 203
Country: Number of subjects enrolled	Germany: 138
Country: Number of subjects enrolled	Czechia: 71
Country: Number of subjects enrolled	Argentina: 54
Country: Number of subjects enrolled	Serbia: 12
Country: Number of subjects enrolled	Slovakia: 1

Worldwide total number of subjects	1001
EEA total number of subjects	210

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	10
Adolescents (12-17 years)	25
Adults (18-64 years)	790
From 65 to 84 years	174
85 years and over	2

Subject disposition

Recruitment

Recruitment details:

The first subject enrolled on 20 March 2019 and the last subjected completed the study on 20 July 2021. Subjects were enrolled at 126 study centers worldwide (Argentina, Czechia, Germany, Serbia, Slovakia, Ukraine and the United States).

Pre-assignment

Screening details:

A total of 1876 patients were screened for this study, of which 875 patients were not randomized to treatment; 851 were ineligible, 3 were lost to follow up, 1 was excluded due to a protocol deviation, 18 withdrew by subject decision, and 2 withdrew by parent/guardian decision.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	BDA MDI 160/180

Arm description:

Combination product: Budesonide/albuterol pressurized metered dose inhaler (BDA MDI) 160/180 micrograms (µg), given as 2 inhalations of BDA MDI 80/90 µg, four times a day (QID).

Arm type	Experimental
Investigational medicinal product name	Budesonide/albuterol 160/180 milligrams (µg) pressurized metered dose inhaler (MDI)
Investigational medicinal product code	
Other name	PT027 high dose
Pharmaceutical forms	Pressurised inhalation, suspension
Routes of administration	Inhalation use

Dosage and administration details:

4 doses (8 inhalations of BDA MDI 80/90) per day.

Arm title	BDA MDI 80/180
------------------	----------------

Arm description:

Combination product: Budesonide/albuterol pressurized metered dose inhaler (BDA MDI) 80/180 micrograms (µg), given as 2 inhalations of BDA MDI 40/90 µg, four times a day (QID).

Arm type	Experimental
Investigational medicinal product name	Budesonide/albuterol 80/180 milligrams (µg) pressurized metered dose inhaler (MDI)
Investigational medicinal product code	
Other name	PT027 low dose
Pharmaceutical forms	Pressurised inhalation, suspension
Routes of administration	Inhalation use

Dosage and administration details:

4 doses (8 inhalations of BDA MDI 40/90) per day.

Arm title	BD MDI 160
------------------	------------

Arm description:

Budesonide pressurized metered dose inhaler (BD MDI) 160 micrograms (µg), given as 2 inhalations of BD MDI 80 µg, four times a day (QID).

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	Budesonide 160 milligrams (µg) pressurized metered dose inhaler (MDI)
Investigational medicinal product code	
Other name	PT008
Pharmaceutical forms	Pressurised inhalation, suspension
Routes of administration	Inhalation use
Dosage and administration details: 4 doses (8 inhalations of BD MDI 80) per day.	
Arm title	AS MDI 180
Arm description: Albuterol pressurized metered dose inhaler (AS MDI) 180 micrograms (µg), given as 2 inhalations of AS MDI 90 µg, four times a day (QID)	
Arm type	Active comparator
Investigational medicinal product name	Albuterol 180 milligrams (µg) pressurized metered dose inhaler (MDI)
Investigational medicinal product code	
Other name	PT007
Pharmaceutical forms	Pressurised inhalation, suspension
Routes of administration	Inhalation use
Dosage and administration details: 4 doses (8 inhalations of AS MDI 90) per day.	
Arm title	Placebo MDI
Arm description: Placebo pressurized metered dose inhaler (Placebo MDI), given as 2 inhalations of Placebo MDI four times a day (QID)	
Arm type	Placebo
Investigational medicinal product name	Placebo pressurized metered dose inhaler (MDI)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Pressurised inhalation, suspension
Routes of administration	Inhalation use
Dosage and administration details: 4 doses (8 inhalations) of Placebo MDI per day.

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: One subject was randomised in error and immediately discontinued without receiving any amount of randomly assigned treatment. This subject was excluded from summaries of baseline characteristics, efficacy, and safety. One subject was randomised and received randomly assigned treatment before being determined to be a duplicate patient. This subject was excluded from summaries of baseline characteristics and efficacy but included in analyses of safety.

Primary: Change from baseline FEV1 AUC0-6 hours over 12 weeks

End point title	Change from baseline FEV1 AUC0-6 hours over 12 weeks
-----------------	--

End point description:

FEV1 = Forced expiratory volume in 1 second. AUC0-6hours = Area under the curve from 0 to 6 hours.

The dual-primary endpoint of change from baseline FEV1 AUC0-6 hours is calculated from the changes from baseline in serial spirometry measures following dosing of randomized treatment at each clinical visit. The area under the curve is calculated using the trapezoidal rule and is normalized by dividing through by the time from dosing to the last measurement included in the serial spirometry profile in order to present the result in millilitres. Baseline FEV1 is defined as the average of the 30- and 60-minute pre-dose measures collected on the day of randomization.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
11 February 2019	Clarified that sponsor provided IP dose frequency was QID; Confirmed that new IP was to be dispensed and used for in clinic FEV1 measurements at each visit; Clarified instructions regarding proper IP preparation, dispensing, and dosing for postdose assessments at each in clinic dosing visit; Clarified that IP was to be dosed before 10:00am at all in clinic dosing visits; Clarified that pre-dose and post-dose FEV1 measurements for the bronchodilator responsiveness test were in relation to sponsor provided Ventolin; Removed supine as position for measuring blood pressure.
06 July 2020	<p>Updated the number of adult and adolescent subjects randomized from 600 to 1000, the number of subjects within each treatment arm from 120 to 200, and the number of subjects screened from 1000 to 2000, following the protocol specified blinded sample size reassessment that was conducted. Text was added to describe and justify a second blinded sample size re-estimation.</p> <p>Clarified the timepoints for some of the exploratory objectives and endpoints as "at Week 12".</p> <p>Added justification to continue study enrolment and treatment during the COVID-19 pandemic. Added methodology that will be used to evaluate the impact of the COVID-19 pandemic on efficacy and safety variables.</p> <p>Introduced unified language for the country specific protocols, which included age limits in various countries. Minor clarifications to the inclusion and exclusion criteria, and to the study procedures.</p> <p>Added pregnancy testing to Visit 3 and Visit 5.</p> <p>Clarified that primary analysis treatment comparisons will exclude the children (ages 4-11 years) and specified that the analysis will be repeated to include children, but will be considered a supportive analysis of the dual-primary endpoint.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
