General information about the trial

Main objective of the trial:

The main objective of this study was to evaluate M7824 monotherapy in subjects with advanced or metastatic biliary tract cancer (BTC) who failed or were intolerant to first-line (1L) chemotherapy.

Protection of trial subjects:

Subject protection was ensured by following high medical and ethical standards in accordance with the principles laid down in the Declaration of Helsinki, and that are consistent with Good Clinical Practice and applicable regulations.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	M7824
------------------	-------

Arm description:

Subjects received intravenous infusion of M7824 at a dose of 1200 milligrams (mg) once every 2 weeks until confirmed progression of disease, death, unacceptable toxicity, or study withdrawal.

Arm type	Experimental
Investigational medicinal product name	M7824
Investigational medicinal product code	
Other name	Bintrafusp alfa
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

M7824 administered to subjects at a dose of 1200 mg once every 2 weeks until confirmed progression of disease, death, unacceptable toxicity, or study withdrawal.

End point title	Percentage of Subjects With Confirmed Objective Response According to Response Evaluation Criteria in Solid Tumors Version 1.1 (RECIST v1.1) as Assessed by Independent Review Committee (IRC) ^[1]
-----------------	---

End point description:

Confirmed objective response was defined as the percentage of subjects with a confirmed objective response of complete response (CR) or partial response (PR). CR: Disappearance of all evidence of target and non-target lesions. PR: At least 30% reduction from baseline in the sum of the longest diameter (SLD) of all lesions. Confirmed CR = at least 2 determinations of CR at least 4 weeks apart and before progression. Confirmed PR = at least 2 determinations of PR at least 4 weeks apart and before progression (and not qualifying for a CR). Confirmed objective response was determined according to RECIST v1.1 and as adjudicated by IRC. Intention-To-Treat (ITT) analysis set included all subjects who were administered at least one dose of M7824.

End point title	Number of Subjects with Treatment-Emergent Adverse Events (TEAEs) and Treatment-Related TEAEs, Including Adverse Event of Special Interests (AESIs)
-----------------	---

End point description:

Adverse Event (AE) was defined any untoward medical occurrence in a subject administered with a study drug, which does not necessarily had a causal relationship with this treatment. Serious AE was

defined AE that resulted in any of the following outcomes: death; life threatening; persistent/significant disability/incapacity; initial/prolonged inpatient hospitalization; congenital anomaly/birth defect. TEAEs: TEAEs was defined as events with onset date or worsening during the on-treatment period. TEAEs included serious AEs and non-serious AEs. Treatment-related TEAEs: reasonably related to the study intervention. AESIs included Infusion-related reactions, Immune-related AEs, Transforming growth factor-beta (TGF- β) inhibition mediated skin AE and anemia. Safety analysis set included all subjects who were administered at least one dose of M7824.

End point description:

DRR was defined as the percentage of subjects with confirmed objective response (CR or PR) with duration of at least 6 months. CR: Disappearance of all evidence of target and non-target lesions. PR: At least 30% reduction from baseline in the SLD of all lesions. PD: At least a 20 percent (%) increase in the SLD, taking as reference the smallest SLD recorded from baseline or the appearance of 1 or more new lesions. DRR was determined according to RECIST v1.1 and assessed by IRC. ITT analysis set included all subjects who were administered at least one dose of M7824. DOR: subjects with confirmed response, as time from first documentation of objective response (CR/PR) to date of first documentation of PD/death due to any cause, whichever occurred first. PD: At least a 20% increase in SLD, taking as reference smallest SLD recorded from baseline or the appearance of 1 or more new lesions. DOR was adjudicated by IRC through PD-L1 Subgroup: PD-L1 expression on tumor cells (TC) and on immune cells (IC) at baseline and in following categories: <1%, ≥1%, <5%, ≥5%, <25%, ≥25%, <50%, ≥50% was reported. ITT analysis set was used. "Number of Subjects Analyzed" =subjects who were evaluable for this endpoint; "n"=subjects who were evaluable for the specified categories for this endpoint. Were there any global substantial amendments to the protocol? Yes

Date	Amendment
26 August 2019	<ul style="list-style-type: none">• To clarify eligibility criteria of the study population.• To modify non-serious adverse event of special interest (AESI) reporting.• To include separate consent forms for treatment after initial and confirmed progressive disease.• To revise the laboratory assessments.• To include exploratory analysis of tumor shrinkage per biliary tract cancer (BTC) subtype.
10 October 2019	To clarify exclusion criteria of the study population and the management of immune-related adverse event and bleeding events during study intervention.
20 October 2020	<ul style="list-style-type: none">• Provide sufficient survival follow up data collection for participants with long-term benefit.• Minor text revisions are made for clarity, readability, consistency of language across the development program, and compliance with current Sponsor guidelines.
22 June 2021	<ul style="list-style-type: none">• The risk reclassification was based on in-depth analysis of a pooled safety dataset of N = 765 subjects who received M7824 monotherapy at 1200 mg Q2W. The information on the number of subjects treated with M7824 is provided in the IB.• Infusion-related reactions are reclassified from "important identified risk" to "identified risk" for M7824.• Skin Adverse Events have been renamed to TGF-β Inhibition Mediated Skin Reactions.• Term "treatment-related anemia events" has been revised to "anemia" and reclassified from "important potential risk" to "important identified risk" for M7824.• Bleeding events are reclassified from "potential risk" to "important identified risk" for M7824.
