

Clinical trial results:

A Phase 3, Double-Blind, Randomized, 8-Week, Vehicle-Controlled Efficacy and Safety Study of Ruxolitinib Cream Followed by a Long Term Safety Extension Period in Adolescents and Adults With Atopic Dermatitis

Summary

EudraCT number	2018-003712-45
Trial protocol	DE HU FR PL IT
Global end of trial date	01 December 2020

Results information

Result version number	v1 (current)
This version publication date	03 December 2021
First version publication date	03 December 2021

Trial information

Trial identification

Sponsor protocol code	INCB 18424-303

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 December 2020
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	01 December 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The purpose of this study is to assess the efficacy and safety of twice daily ruxolitinib cream in adolescents and adults with Atopic Dermatitis (AD)

Protection of trial subjects:

This study will be performed in accordance with ethical principles that have their origin in the Declaration of Helsinki and conducted in adherence to the study Protocol, applicable Good Clinical Practices, and applicable laws and country-specific regulations in which the study is being conducted.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	20 December 2018
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	11 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 49
Country: Number of subjects enrolled	France: 9
Country: Number of subjects enrolled	Germany: 6
Country: Number of subjects enrolled	Hungary: 17
Country: Number of subjects enrolled	Italy: 6
Country: Number of subjects enrolled	Poland: 153
Country: Number of subjects enrolled	United States: 391
Worldwide total number of subjects	631
EEA total number of subjects	191

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	123
Adults (18-64 years)	450
From 65 to 84 years	57
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

A total of 631 participants took part in the study at 78 sites, 48 in North America and 30 in Europe from December 20, 2018 to December 01, 2020.

Pre-assignment

Screening details:

Participants in Vehicle Control (VC) Period with no safety concerns at week 8 continued in the 44-week Long Term Safety (LTS) Period and equally randomized into 1 of the 2 active treatment groups. Participants who were on active treatment during the VC Period continued with the same treatment regimen in the LTS Period

Period 1

Period 1 title	Vehicle Control Period (Day 1 to Week 8)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Data analyst

Arms

Are arms mutually exclusive?	Yes
Arm title	VC Period: Vehicle Cream BID

Arm description:

Participants received vehicle cream, applied topically to the affected areas as a thin film twice daily (BID) from Day 1 to Week 8 during the VC Period.

Arm type	Placebo
Investigational medicinal product name	Vehicle Cream
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Cream
Routes of administration	Topical use

Dosage and administration details:

Twice a Day

Arm title	VC Period: Ruxolitinib 0.75% Cream BID
------------------	--

Arm description:

Participants received ruxolitinib 0.75% cream, applied topically to the affected areas as a thin film BID from Day 1 to Week 8 during the VC Period.

Arm type	Experimental
Investigational medicinal product name	ruxolitinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Cream
Routes of administration	Topical use

Dosage and administration details:

0.75% cream Twice a Day

Arm title	VC Period: Ruxolitinib 1.5% Cream BID
------------------	---------------------------------------

Arm description:

Participants received ruxolitinib 1.5% cream, applied topically to the affected areas as a thin film BID from Day 1 to Week 8 during the VC Period.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	ruxolitinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Cream
Routes of administration	Topical use

Dosage and administration details:

1.5% cream Twice a Day

Number of subjects in period 1	VC Period: Vehicle Cream BID	VC Period: Ruxolitinib 0.75% Cream BID	VC Period: Ruxolitinib 1.5% Cream BID
Started	126	252	253
Completed	95	222	225
Not completed	31	30	28
Physician decision	1	1	-
Consent withdrawn by subject	17	11	19
Adverse event, non-fatal	4	2	1
Reason Not Specified	2	1	-
Pregnancy	1	-	-
Lost to follow-up	5	12	8
Lack of efficacy	1	-	-
Protocol deviation	-	3	-

Period 2

Period 2 title	Long-Term Safety Period (Weeks 8 to 52)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	LTS Period: Vehicle Cream to Ruxolitinib 0.75% Cream BID

Arm description:

Participants who applied vehicle cream BID during the VC Period, were randomized to apply ruxolitinib 0.75% cream, topically to the affected areas as a thin film BID from Week 8 to 52 during the LTS Period.

Arm type	Experimental
Investigational medicinal product name	ruxolitinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Cream
Routes of administration	Topical use

Dosage and administration details:

0.75% Cream Twice a day

Arm title	LTS Period: Vehicle Cream to Ruxolitinib 1.5% Cream BID
------------------	---

Arm description:

Participants who applied vehicle cream BID during the VC Period, were randomized to apply ruxolitinib 1.5% cream, topically to the affected areas as a thin film BID from Week 8 to 52 during the LTS Period.

Arm type	Experimental
Investigational medicinal product name	ruxolitinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Cream
Routes of administration	Topical use

Dosage and administration details:

1.5% Cream Twice a day

Arm title	LTS Period: Ruxolitinib 0.75% Cream
------------------	-------------------------------------

Arm description:

Participants who applied ruxolitinib 0.75% cream during VC Period, continued applying ruxolitinib 0.75% cream topically to the affected areas as a thin film BID from Week 8 to 52 during the LTS Period.

Arm type	Experimental
Investigational medicinal product name	ruxolitinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Cream
Routes of administration	Topical use

Dosage and administration details:

0.75% Cream Twice a day

Arm title	LTS Period: Ruxolitinib 1.5% Cream
------------------	------------------------------------

Arm description:

Participants who applied ruxolitinib 1.5% cream during VC Period, continued applying ruxolitinib 1.5% cream topically to the affected areas as a thin film BID from Week 8 to 52 during the LTS Period.

Arm type	Experimental
Investigational medicinal product name	ruxolitinib
Investigational medicinal product code	
Other name

Primary: Percentage of Participants Who Achieved Investigator's Global Assessment - Treatment Success (IGA-TS) at Week 8

End point title	Percentage of Participants Who Achieved Investigator's Global Assessment - Treatment Success (IGA-TS) at Week 8
End point description: The IGA is an overall eczema severity rating on a 5-point scale ranging from 0 (clear skin) to 4 (severe disease). The score is based on an overall assessment of the degree of erythema, induration/papulation, and oozing/crusting. The IGA-TS is defined as an IGA score of 0 (clear skin) or 1 (almost clear skin) with ≥ 2 grade improvement from Baseline.

Secondary: VC Period: Percentage of Participants Who Achieved Eczema Area and Severity Index 75 (EASI75)

End point title	VC Period: Percentage of Participants Who Achieved Eczema Area and Severity Index 75 (EASI75)
End point description:	
EASI scoring system examines 4 areas of the body and weights them for participants of at least 8 years of age. Each of the 4 body regions is assessed separately for erythema (E), induration/papulation/edema (I), excoriations (Ex), and lichenification (I) for an average degree of severity of each sign in each region. The severity strata for the EASI are as follows: 0 = clear; 0.1 to 1.0 = almost clear; 1.1 to 7.0 = mild; 7.1 to 21.0 = moderate; 21.1 to 50.0 = severe; 50.1 to 72.0 = very severe. An EASI75 responder was defined as a participant achieving 75% or greater improvement from Baseline in EASI score.

End point title	VC Period: Percentage of Participants With at Least One Treatment-Emergent Adverse Event (TEAE) and Treatment-Emergent Serious Adverse Event (SAE)
-----------------	--

End point description:

An AE is any untoward medical occurrence associated with the use of a drug in humans, whether or not considered drug-related. An AE can therefore be any unfavorable and unintended sign (including an abnormal laboratory finding), symptom, or disease (new or exacerbated) temporally associated with the use of study treatment. A SAE is defined as any untoward medical occurrence that, at any dose results in death, is life-threatening, requires inpatient hospitalization or prolongation of existing hospitalization, results in persistent or significant disability/incapacity, is a congenital anomaly/birth defect or an important medical event may be considered serious when, based on appropriate medical judgment, the event may jeopardize the participant and may require medical or surgical intervention to prevent one of the outcomes listed above. A TEAE or treatment emergent SAE is any AE or SAE either reported for first time or worsening of a pre-existing event after first dose of study drug.

Secondary: VC Period: Percent Change From Baseline In SCORing Atopic Dermatitis (SCORAD) Score

End point title	VC Period: Percent Change From Baseline In SCORing Atopic Dermatitis (SCORAD) Score
End point description:	
<p>The SCORAD is a tool to assess extent and severity of eczema. To determine the extent, the rule of nines or handprint method is used to assess eczema affected area (A). To determine disease severity (B) it evaluates 6 clinical characteristics: 1. redness, 2. swelling, 3. oozing/crusting, 4. scratch marks, 5. lichenification, and 6. dryness on a 4-point scale of 0 to 3 (0=none, 1=mild, 2=moderate, 3=severe), added to give B with maximum score of 18. Subjective symptoms (C) of itch and sleeplessness are assessed using a visual analogue scale where 0 is no itch (or no sleeplessness) and 10 is the worst imaginable itch (or sleeplessness), added to give C with maximum score of 20. These 3 aspects: extent of disease (A: 0-1-2), disease severity (B: 0-18), & subjective symptoms (C: 0-20) combined using $A/5 + 7*B/2 + C$ to give a maximum possible score of 103, where 0 = no disease and 103 = severe disease. A negative change from Baseline indicates improvement.</p>

Statistical analyses

Secondary: VC Period: Change From Baseline in Skin Pain NRS Score

End point title	VC Period: Change From Baseline in Skin Pain NRS Score
End point description:	
The Skin Pain NRS is a daily patient-reported measure (24-hour recall), using a diary, of the worst level of pain intensity from 0 (no pain) to 10 (worst imaginable pain). Participants will be asked, "Rate the pain severity from your atopic dermatitis skin changes by selecting a number that best describes your worst level of pain in the past 24 hours." A negative change from Baseline indicates improvement.

Secondary: VC Period: Change From Baseline in Patient-Oriented Eczema Measure (POEM) Score

End point title	VC Period: Change From Baseline in Patient-Oriented Eczema Measure (POEM) Score
-----------------	---

End point description:

The POEM is a 7-question quality-of-life assessment that asks how many days the participant has been bothered by various aspects of their skin condition during the past 7 days. It assesses disease symptoms (dryness, itching, flaking, cracking, sleep loss, bleeding and weeping) on a scale ranging from 0-4 (0 = no days, 1 = 1-2 days, 2 = 3-4 days, 3 = 5-6 days, 4 = everyday). The sum of the 7 items gives the total POEM score of 0 (absent disease) to 28 (severe disease). High scores are indicative of more severe disease and poor quality of life. A negative change from Baseline indicates improvement.

End point title	VC Period: Change From Baseline in Dermatology Life Quality Index (DLQI) Score
-----------------	--

End point description:

The DLQI is a simple, 10 question (Q) validated quality-of-life questionnaire to measure how much the skin problem has affected the participant. It covers 6 domains including symptoms and feelings (Q1 and Q2), daily activities (Q3 and Q4), leisure (Q5 and Q6), work and school (Q7), personal relationships (Q8 and Q9), and treatment (Q10). The recall Period of this scale is over the last week. Response categories include 0-not at all, 1-a little, 2-a lot, and 3-very much, and unanswered or not relevant responses scored as 0. Scores range from 0 ("no impact on participant's life") to 30 ("extremely large effect on participant's life"), and a 4-point change from Baseline is considered as the minimal clinically important difference threshold. A negative change from Baseline indicates less impact of the skin problem on participant's life.

End point title	VC Period: Change From Baseline in EuroQuality of Life Five Dimensions (EQ-5D-5L) Visual Analogue Scale (VAS) Score
-----------------	---

End point description:

EQ-5D-5L questionnaire has 2 parts: EQ-5D-5L descriptive system & EQ-VAS. EQ-5D is a validated, self-administered, generic utility questionnaire wherein participants rate their current health state based on 5 dimensions: mobility, self-care, usual activities, pain/discomfort, and anxiety/depression. 5L indicates that for each dimension, there are 5 levels: 1=no problems, 2=slight problems, 3=moderate problems, 4=severe problems, and 5=extreme problems. EQ-5D-5L score is assessed using VAS that ranges from 0 to 100 millimetres (mm), where 0 indicates "worst health you can imagine" and 100 indicates "best health you can imagine". The participant was asked to indicate his/her health state over past 7 days in each of the 5 dimensions. Digits for the 5 dimensions can be combined into a 5-digit

describes the participant's health. In the EQ-VAS, participants had to record their health state on a scale ranging from 0 to 100. A positive change from Baseline indicates improvement.

End point description:

The WPAI-SHP is a 6-item participant questionnaire developed to measure the effect of overall health and specific symptoms on productivity at work and regular activities outside of it in the past 7 days. The WPAI-SHP consists of 6 questions as follows: 1=currently employed; 2=hours missed due to AD; 3=hours missed other reasons; 4=hours actually worked; 5=degree AD affected productivity while working; 6=degree AD affected regular activities and the computed percentage, range for each sub scale is from 0 to 100, with higher values indicating greater impairment and less productivity. A negative change from Baseline indicates improvement.

End point timeframe:

Weeks 2, 4 and 8

Notes:

[12] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Since VC group is a placebo no Trough plasma concentrations were measured.
