

## Clinical trial results:

**A Phase 3, randomized, double-blind trial of pembrolizumab (MK-3475) with or without lenvatinib (E7080/MK-7902) in participants with treatment-naïve, metastatic nonsmall cell lung cancer (NSCLC) whose tumors have a tumor proportion score (TPS) greater than or equal to 1% (LEAP-007)**

### Summary

EudraCT number	2018-003794-98
Trial protocol	EE HU PL IT
Global end of trial date	24 April 2024

### Results information

Result version number	v1 (current)
This version publication date	11 April 2025
First version publication date	11 April 2025

### Trial information

#### Trial identification

Sponsor protocol code	7902-007
-----------------------	----------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT03829332
WHO universal trial number (UTN)	-
Other trial identifiers	Eisai Protocol Number: E7080-G000-314, MSD: LEAP-007, APIC-CTI: 194670

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	24 April 2024
Is this the analysis of the primary completion data?	Yes
Primary completion date	19 May 2021
Global end of trial reached?	Yes
Global end of trial date	24 April 2024
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The purpose of this study is to assess the safety and efficacy of pembrolizumab (MK-3475) combined with lenvatinib (MK-7902/E7080) compared to pembrolizumab alone (with placebo for lenvatinib) in treatment-naïve adults with no prior systemic therapy for their metastatic non-small cell lung cancer (NSCLC) whose tumors have a programmed cell death-ligand 1 (PD-L1) Tumor Proportion Score (TPS) greater than or equal to 1%.

The primary study hypotheses are that: 1) the combination of pembrolizumab and lenvatinib is superior to pembrolizumab alone as assessed by Progression-free Survival (PFS) per Response Evaluation Criteria in Solid Tumors version 1.1 (RECIST 1.1); and 2) the combination of pembrolizumab and lenvatinib is superior to pembrolizumab alone as assessed by Overall Survival (OS).

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	13 March 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 5
Country: Number of subjects enrolled	Canada: 15
Country: Number of subjects enrolled	China: 80
Country: Number of subjects enrolled	Colombia: 9
Country: Number of subjects enrolled	Estonia: 9
Country: Number of subjects enrolled	France: 17
Country: Number of subjects enrolled	Hungary: 68
Country: Number of subjects enrolled	Israel: 20
Country: Number of subjects enrolled	Italy: 34
Country: Number of subjects enrolled	Japan: 41
Country: Number of subjects enrolled	Korea, Democratic People's Republic of: 31
Country: Number of subjects enrolled	Malaysia: 36
Country: Number of subjects enrolled	Mexico: 41
Country: Number of subjects enrolled	Poland: 31
Country: Number of subjects enrolled	Russian Federation: 38

Country: Number of subjects enrolled	Taiwan: 19
Country: Number of subjects enrolled	Türkiye: 43
Country: Number of subjects enrolled	Ukraine: 65
Country: Number of subjects enrolled	United States: 21
Worldwide total number of subjects	623
EEA total number of subjects	159

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	279
From 65 to 84 years	341
85 years and over	3

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

Of the 623 total participants randomized in the MK-7902-007 global study, 80 were also randomized in the China extension study for MK-7902-007 (NCT04676412).

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Assessor

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Pembrolizumab + Lenvatinib

Arm description:

Participants received pembrolizumab 200 mg via intravenous (IV) infusion on Day 1 of each 3-week cycle for up to 35 administrations (up to approximately 2 years) PLUS lenvatinib 20 mg via oral capsule once daily (QD) on Days 1-21 of each 3-week cycle until progressive disease or unacceptable toxicity. As of 30-Jul-2021, participants discontinued lenvatinib and participants who remained on treatment received open-label pembrolizumab only at same dose and schedule.

Arm type	Experimental
Investigational medicinal product name	Lenvatinib
Investigational medicinal product code	
Other name	MK-7902 E7080 LENVIMA®
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

20 mg via oral capsule once daily (QD) on Days 1-21 of each 3-week cycle until progressive disease or unacceptable toxicity.

Investigational medicinal product name	Pembrolizumab
Investigational medicinal product code	
Other name	MK-3475 KEYTRUDA®
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

200 mg via IV infusion on Day 1 of each 3-week cycle for up to 35 administrations (up to approximately 2 years)

<b>Arm title</b>	Pembrolizumab + Placebo
------------------	-------------------------

Arm description:

Participants received pembrolizumab 200 mg via IV infusion on Day 1 of each 3-week cycle for up to 35 administrations (up to approximately 2 years) PLUS placebo for lenvatinib via oral capsule QD on Days 1-21 of each 3-week cycle until progressive disease or unacceptable toxicity. As of 30-Jul-2021, participants discontinued placebo and participants who remained on treatment received open-label pembrolizumab only at same dose and schedule.

Arm type	Active comparator
Investigational medicinal product name	Placebo for lenvatinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

oral capsule QD on Days 1-21 of each  
3-week cycle until progressive disease  
or unacceptable toxicity

Investigational medicinal product name	Pembrolizumab
Investigational medicinal product code	
Other name	MK-3475 KEYTRUDA®
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

200 mg via IV infusion on Day 1 of  
each 3-week cycle for up to 35  
administrations (up to approximately 2  
years)

<b>Number of subjects in period 1</b>	Pembrolizumab + Lenvatinib	Pembrolizumab + Placebo
Started	309	314
Treated	309	312
Completed	0	0
Not completed	309	314
Physician decision	1	-
Consent withdrawn by subject	11	9
Death	225	230

Lost to follow-up	1	3

## Baseline characteristics

### Reporting groups

Reporting group title	Pembrolizumab + Lenvatinib
Reporting group description:	
Participants received pembrolizumab 200 mg via intravenous (IV) infusion on Day 1 of each 3-week cycle for up to 35 administrations (up to approximately 2 years) PLUS lenvatinib 20 mg via oral capsule once daily (QD) on Days 1-21 of each 3-week cycle until progressive disease or unacceptable toxicity. As of 30-Jul-2021, participants discontinued lenvatinib and participants who remained on treatment received open-label pembrolizumab only at same dose and schedule.	
Reporting group title	Pembrolizumab + Placebo
Reporting group description:	
Participants received pembrolizumab 200 mg via IV infusion on Day 1 of each 3-week cycle for up to 35 administrations (up to approximately 2 years) PLUS placebo for lenvatinib via oral capsule QD on Days 1-21 of each 3-week cycle until progressive disease or unacceptable toxicity. As of 30-Jul-2021, participants discontinued placebo and participants who remained on treatment received open-label pembrolizumab only at same dose and schedule.	

Reporting group values	Pembrolizumab + Lenvatinib	Pembrolizumab + Placebo	Total
Number of subjects	309	314	623
Age categorical Units: Subjects			
In utero			
Preterm newborn infants (gestational age < 37 wks)			
Newborns (0-27 days)			
Infants and toddlers (28 days-23 months)			
Children (2-11 years)			
Adolescents (12-17 years)			
Adults (18-64 years)			
From 65-84 years			
85 years and over			
Age Continuous Units: years			
arithmetic mean	64.6	65.4	
standard deviation	± 9.6	± 8.8	-
Sex: Female, Male Units: Participants			
Female	79	90	169
Male	230	224	454
Race (NIH/OMB) Units: Subjects			
American Indian or Alaska Native	7	3	10
Asian	103	104	207
Native Hawaiian or Other Pacific Islander	0	0	0
Black or African American	0	1	1
White	188	193	381
More than one race	3	3	6
Unknown or Not Reported	8	10	18

Units: Subjects			
Hispanic or Latino	32	30	62
Not Hispanic or Latino	266	269	535
Unknown or Not Reported	11	15	26
Eastern Cooperative Oncology Group (ECOG) Performance Status			
Randomization of participants in the study was stratified by an ECOG Performance Status of 0 (Fully active, able to carry on all pre-disease performance without restriction) or 1 (Restricted in physically strenuous activity but ambulatory and able to carry out work of a light or sedentary nature).			
Units: Subjects			
ECOG = 0	110	108	218
ECOG = 1	199	206	405
Programmed Cell Death Ligand 1 (PD-L1) Status at Baseline			
Participants were assessed for their PD-L1 tumor expression level by immunohistochemistry assay using tumor tissue from a newly obtained biopsy. Randomization of participants in the study was stratified by PD-L1 tumor proportion score (TPS) at baseline (1-49% or $\geq 50\%$ ). Higher percentages of PD-L1 TPS staining correspond to higher positivity of PD-L1 on a tumor.			
Units: Subjects			
TPS = 1-49%	172	175	347
TPS = $\geq 50\%$	137	139	276
Geographic Region			
Randomization of participants in this study was stratified by geographic region of the enrolling site (East Asia or non-East Asia).			
Units: Subjects			
East Asia	103	104	207
Non-East Asia	206	210	416

## End points

### End points reporting groups

Reporting group title	Pembrolizumab + Lenvatinib
-----------------------	----------------------------

Reporting group description:

Participants received pembrolizumab 200 mg via intravenous (IV) infusion on Day 1 of each 3-week cycle for up to 35 administrations (up to approximately 2 years) PLUS lenvatinib 20 mg via oral capsule once daily (QD) on Days 1-21 of each 3-week cycle until progressive disease or unacceptable toxicity. As of 30-Jul-2021, participants discontinued lenvatinib and participants who remained on treatment received open-label pembrolizumab only at same dose and schedule.

Reporting group title	Pembrolizumab + Placebo
-----------------------	-------------------------

Reporting group description:

Participants received pembrolizumab 200 mg via IV infusion on Day 1 of each 3-week cycle for up to 35 administrations (up to approximately 2 years) PLUS placebo for lenvatinib via oral capsule QD on Days 1-21 of each 3-week cycle until progressive disease or unacceptable toxicity. As of 30-Jul-2021, participants discontinued placebo and participants who remained on treatment received open-label pembrolizumab only at same dose and schedule.

### Primary: Progression-free Survival (PFS) as Assessed by Response Evaluation Criteria in Solid Tumors Version 1.1 (RECIST 1.1)

End point title	Progression-free Survival (PFS) as Assessed by Response Evaluation Criteria in Solid Tumors Version 1.1 (RECIST 1.1)
-----------------	--

End point description:

PFS was defined as the time from date of randomization to the date of the first documentation of progressive disease (PD) or death from any cause, whichever occurred first. Per RECIST 1.1, PD was defined as  $\geq 20\%$  increase in the sum of diameters of target lesions. In addition to the relative increase of 20%, the sum must also demonstrate an absolute increase of  $\geq 5$  mm. The appearance of one or more new lesions was also considered PD. Data are from the product-limit (Kaplan-Meier) method for censored data. PFS as assessed by blinded independent central review (BICR) per RECIST 1.1 was presented. The analysis population consisted of all randomized participants.

---

End point title	Change from Baseline in European Organization for Research and Treatment (EORTC) Quality of Life Questionnaire-Core30 (QLQ-C30) Combined Global Health Status/Quality of Life (Items 29 & 30) Scale Combined Score
-----------------	--

End point description:

EORTC QLQ-C30 is a questionnaire to assess the overall quality of life (QoL) of cancer patients. Participant responses to questions regarding Global Health Status (GHS; "How would you rate your overall health during the past week?") and QoL ("How would you rate your overall quality of life during the past week?") are scored on a 7-point scale (1= Very poor to 7=Excellent). The combined score of GHS (Item 29) and QoL (Item 30) is computed by averaging the raw scores of the 2 items and then applying a linear transformation to standardize the average score, so that the combined scores range from 0-100. A higher score indicates a better outcome. Per protocol, the change from baseline in GHS and QoL combined score was presented. All randomized participants who have received at least one dose of the study intervention and had at least one EORTC QLQ-C30 assessment data available for this outcome measure.

**Secondary: Time to True Deterioration (TTD) in EORTC QLQ-LC13 Chest Pain (Item 40) Scale Score**

End point title	Time to True Deterioration (TTD) in EORTC QLQ-LC13 Chest Pain (Item 40) Scale Score
-----------------	---

## End point description:

EORTC QLQ-LC13 is a lung cancer specific questionnaire. Participant responses to the question: "Have you had pain in your chest?" are scored on a 4-point scale (1=Not at All to 4=Very Much). Using linear transformation, raw scores are standardized, so that scores range from 0-100. A lower score indicates a better outcome. TTD was defined as the time from baseline to first onset of  $\geq 10$ -point negative change

(decrease) from baseline in cough (Item 40). A longer TTD indicates a better outcome. A value of 9999 indicates that no data were calculated. All randomized participants who received at least one dose of study treatment and have at least one EORTC-QLQ-LC13 Item 40 assessment data available.

End point title	Time to True Deterioration (TTD) in EORTC QLQ-C30 Combined Global Health Status /Quality of Life (Items 29 & 30) Scale Combined Score
End point description:	
EORTC QLQ-C30 is a questionnaire to assess QoL of cancer patients. Participant responses to questions on GHS ("How would you rate your overall health during the past week?") and QoL ("How would you rate your overall QoL during the past week?") were scored on a 7-point scale (1= Very poor to 7=Excellent). The combined score of GHS (Item 29) and QoL (Item 30) was computed by averaging raw scores of the 2 items and applying a linear transformation to standardize the average score, so that the combined scores range from 0-100. A higher score indicates a better outcome. TTD was defined as the time from baseline to first onset of $\geq 10$ -point negative change (decrease) from baseline in GHS-QoL combined score. A longer TTD indicates a better outcome. A value of 9999 indicates that no data were calculated. All randomized participants who received at least one dose of study treatment and have at least one EORTC-QLQ-C30 Item 29 and Item 30 assessment data available.

## Secondary: Time to True Deterioration (TTD) Based on Change from Baseline in the Composite Endpoint of Cough (EORTC QLQ-LC13 Item 31), Chest Pain (EORTC QLQ-LC13 Item 40), or Dyspnea (EORTC QLQ-C30 Item 8)

End point title	Time to True Deterioration (TTD) Based on Change from Baseline in the Composite Endpoint of Cough (EORTC QLQ-LC13 Item 31), Chest Pain (EORTC QLQ-LC13 Item 40), or Dyspnea (EORTC QLQ-C30 Item 8)
-----------------	--

### End point description:

The EORTC QLQ-C30 is a 30-item questionnaire developed to assess QoL of cancer patients, including a single-item scale score for dyspnea (Item 8; score range: 1=Not at All to 4=Very Much). Used in combination with QLQ-C30, the EORTC QLQ-LC13 is a supplemental lung cancer-specific module, including a single-item scale score for cough (Item 31; score range: 1=Not at All to 4=Very Much) and chest pain (Item 40, score range: 1=Not at All to 4=Very Much). The combined score was computed by averaging raw scores of all items; then applying a linear transformation to standardize average score. Combined scores range from 0-100. A higher score indicates a better outcome. TTD in the composite endpoint (Items 31, 40, & 8) scale score was presented, defined as time to first onset of a  $\geq 10$  point. 9999 value indicates that no data were calculated. All randomized participants who received at least 1 dose of study treatment & have at least one EORTC-QLQ-C30 or QLQ-LC13 assessment data available.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Up to approximately 61 months

Adverse event reporting additional description:

All-cause mortality includes all randomized participants (n=623). Adverse events (AEs) include all randomized participants who received  $\geq 1$  dose of study drug. Cancer disease progression was not an AE unless study related. MedDRA terms neoplasm progression, malignant neoplasm progression & disease progression unrelated to study drug were excluded.

Assessment type	Systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
17 February 2019	The major changes for amendment 1 (AM 1) were to add clarification for pharmacokinetic blood draws and added that complete urinalysis is required at screening and every 4 cycles.
09 August 2019	The major changes for AM2 included updates to contraception requirements for males and WOCBP. Male participants must agree to protocol-specific contraception during the intervention period and for at least 30 days after the last dose of lenvatinib/placebo. WOCBP must use a contraceptive method that is highly effective with low user dependency or be abstinent from heterosexual intercourse during the intervention period and for at least 120 days post pembrolizumab or 30 days post lenvatinib/matching placebo, whichever occurs last.
16 January 2020	The major change for AM3 was to clarify that ECG is only required at EOT and safety follow up visits when lenvatinib/matching placebo is discontinued.
20 April 2021	The major change for AM5 was to remove collection of pembrolizumab and lenvatinib PK and pembrolizumab ADA sampling.
24 November 2021	The major change for AM6 included unblinding of the study and removing lenvatinib and matching placebo from the study, stopping collection of ePRO data and to add that the study will remain open to allow ongoing participants to continue treatment with open-label pembrolizumab monotherapy up to a maximum of 35 administrations.
13 December 2022	The major change for AM7 was to do the entity name change and update the address.

Notes:
