

## Clinical trial results:

### A Multicenter, Double-Blind, Multidose, Placebo-Controlled, Randomized, Parallel-Group, Phase 2 Study to Evaluate the Efficacy and Safety of Intravenous BII093 for Patients With Brain Contusion

#### Summary

EudraCT number	2018-003858-24
Trial protocol	ES IT
Global end of trial date	27 June 2023

#### Results information

Result version number	v1 (current)
This version publication date	15 December 2023
First version publication date	15 December 2023

#### Trial information

##### Trial identification

Sponsor protocol code	252BN201
-----------------------	----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT03954041
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Biogen
Sponsor organisation address	225 Binney Street, Cambridge, United States, 02142
Public contact	Biogen Study Medical Director, Biogen, clinicaltrials@biogen.com
Scientific contact	Biogen Study Medical Director, Biogen, clinicaltrials@biogen.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 June 2023
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	27 June 2023
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of the study was to determine if BIIB093 reduces brain contusion expansion by Hour 96 when compared to placebo. The secondary objectives were to evaluate the effects of BIIB093 on acute neurologic status, functional outcomes, and treatment requirements, to further differentiate the mechanism of action of BIIB093 on contusion expansion by examining differential effects on hematoma and edema expansion, and to determine if BIIB093 improves survival at Day 90 when compared to placebo.

Protection of trial subjects:

Written informed consent was obtained from each participant or participant's legally authorized representative (e.g., legal guardian), as applicable, prior to evaluations performed for eligibility. Participants or the participant's legally authorized representative were given adequate time to review the information in the informed consent/assent and were allowed to ask, and have answered, questions concerning all portions of the conduct of the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	06 October 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 21
Country: Number of subjects enrolled	Japan: 21
Country: Number of subjects enrolled	Italy: 21
Country: Number of subjects enrolled	United States: 12
Country: Number of subjects enrolled	France: 9
Country: Number of subjects enrolled	Israel: 2
Worldwide total number of subjects	86
EEA total number of subjects	51

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	54
From 65 to 84 years	31
85 years and over	1

## Subject disposition

### Recruitment

Recruitment details:

Participants were enrolled at study centers in Israel, France, Japan, Italy, Spain, and the United States.

### Pre-assignment

Screening details:

A total of 92 participants were enrolled and randomized, out of which 86 participants were dosed with BIIB093 or a matching placebo.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Subject, Data analyst, Carer

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo

Arm description:

Participants were administered with BIIB093 matching placebo as an intravenous (IV) bolus followed by a rapid IV infusion and a slow IV infusion for 4 days.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

BIIB093 matching placebo administered as an IV bolus followed by a rapid IV infusion and a slow IV infusion for 4 days.

<b>Arm title</b>	BIIB093 3 mg/day
------------------	------------------

Arm description:

Participants were administered with BIIB093 up to 3 milligrams per day (mg/day) as an IV bolus followed by a rapid IV infusion and a slow IV infusion for 4 days.

Arm type	Experimental
Investigational medicinal product name	BIIB093
Investigational medicinal product code	
Other name	Glibenclamide, CIRARA, RP 1127
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Up to 3mg/day BIIB093 administered as an IV bolus followed by a rapid IV infusion and a slow IV infusion for 4 days.

<b>Arm title</b>	BIIB093 5 mg/day
------------------	------------------

Arm description:

Participants were administered with BIIB093 up to 5 mg/day as an IV bolus followed by a rapid IV infusion and a slow IV infusion for 4 days.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	BIIB093
Investigational medicinal product code	
Other name	Glibenclamide, CIRARA, RP 1127
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Up to 5mg/day BIIB093 administered as an IV bolus followed by a rapid IV infusion and a slow IV infusion for 4 days.

<b>Number of subjects in period 1</b>	Placebo	BIIB093 3 mg/day	BIIB093 5 mg/day
Started	44	21	21
Completed	30	14	11
Not completed	14	7	10
Adverse event, serious fatal	4	-	1
Other	7	4	2
Lost to follow-up	3	3	6
Death by neurologic criteria	-	-	1

## End points

### End points reporting groups

Reporting group title	Placebo
Reporting group description: Participants were administered with BIIB093 matching placebo as an intravenous (IV) bolus followed by a rapid IV infusion and a slow IV infusion for 4 days.	
Reporting group title	BIIB093 3 mg/day
Reporting group description: Participants were administered with BIIB093 up to 3 milligrams per day (mg/day) as an IV bolus followed by a rapid IV infusion and a slow IV infusion for 4 days.	
Reporting group title	BIIB093 5 mg/day
Reporting group description: Participants were administered with BIIB093 up to 5 mg/day as an IV bolus followed by a rapid IV infusion and a slow IV infusion for 4 days.	

### Primary: Change From Baseline in Mean Total Contusion Volume (Hematoma Plus Perihematoma Edema) at 96 Hours as Measured by Brain Imaging

End point title	Change From Baseline in Mean Total Contusion Volume (Hematoma Plus Perihematoma Edema) at 96 Hours as Measured by Brain Imaging
End point description: Total contusion volume including hematoma and perihematoma edema volumes reported in mL was assessed by the central imaging core laboratory on baseline non-contrast computed tomography (NCCT), 24-hour NCCT, and the 96-hour scan (Magnetic resonance imaging [MRI and/or NCCT) and the scans obtained prior to decompressive craniectomy (DC), intraparenchymal hematoma (IPH) evacuation, or comfort measures only (CMO). Modified intent to treat (mITT) population included all randomised participants who received any study drug (BIIB093 or placebo) and had at least one final read per central review of contusion volume from a NCCT or MRI scan acquired between 10 hours after initiation of study drug infusion and Hour 96 visit or neurosurgical intervention (NSx) or CMO, if earlier. Here, 'subjects analysed' signifies number of participants with data available for endpoint analysis. 'Number analysed (n)' signifies number of participants with data available for analysis at specified timepoint.	
End point type	Primary
End point timeframe: Baseline up to 96 hours (Day 4)	

End point values	Placebo	BIIB093 3 mg/day	BIIB093 5 mg/day	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	38	20	19	
Units: milliliters (mL)				
arithmetic mean (standard deviation)				
Baseline (n=38,20, 19)	29.45 (± 29.688)	21.21 (± 26.659)	21.33 (± 26.637)	
Change From Baseline at 96 hours (n=34,19,15)	18.91 (± 23.804)	30.07 (± 29.418)	18.78 (± 12.771)	

## Statistical analyses

<b>Statistical analysis title</b>	Combined BIIB093 vs Placebo
Comparison groups	Placebo v BIIB093 3 mg/day v BIIB093 5 mg/day
Number of subjects included in analysis	77
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.3752 <sup>[1]</sup>
Method	ANCOVA
Parameter estimate	LS Mean difference
Point estimate	4.62
Confidence interval	
level	95 %
sides	2-sided
lower limit	-5.74
upper limit	14.98

Notes:

[1] - P-value was analyzed by ANCOVA model with covariates: treatment, interactive response technology (IRT) stratification factors at randomization, baseline total contusion volume based on central read, imaging modality at Hour 96 (MRI vs NCCT).

## Secondary: Percentage of Participants With Glasgow Outcome Scale - Extended (GOS-E) Score at Day 180

End point title	Percentage of Participants With Glasgow Outcome Scale - Extended (GOS-E) Score at Day 180
-----------------	-------------------------------------------------------------------------------------------

End point description:

The GOS-E is a global scale for functional outcomes that rates participant status on a 7-category ordinal scale into one of five categories: 1 and 2: Dead and Vegetative State, 3 and 4: Severe disability lower and upper categories, 5 and 6: Moderate disability lower and upper categories, 7 and 8: Good recovery lower and upper categories. Lower scores indicate death and higher scores indicate recovery. mITT population included all the randomised participants who received any study drug (BIIB093 or placebo) and had at least one final read per central review of contusion volume from a NCCT or MRI scan acquired between 10 hours after the initiation of study drug infusion and the Hour 96 visit or NSx or CMO, if earlier. Here, 'subjects analysed' signifies the number of participants with data available for endpoint analysis.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
17 February 2020	<ul style="list-style-type: none"><li>• The age range for study inclusion was increased from up to 80 years old to up to 85 years old. In addition, the Glasgow Coma Scale (GCS) score range for study inclusion was increased from up to 14 to up to 15</li><li>• Updated text to clarify definition of low blood glucose (BG)</li><li>• Updated text to clarify if a participant is discharged from the hospital prior to Hour 96, sites should still obtain neuroimaging prior to the participant departing the hospital</li><li>• Updated text to clarify that participants can get a NCCT scan if an MRI is not possible and that Hour 96 MRI scan should be performed within 18 hours of the Hour 96 time point</li><li>• Pharmacokinetic (PK) objectives related to evaluation of BIIB093 was updated</li><li>• Added text to clarify the mechanism of injury for study inclusion; exclusion criteria for NCCT or MRI; use of transient vasopressor, interventional radiology procedures for embolization, vitamin K antagonists</li><li>• Suicidal ideation assessment was added to the schedule of activities at baseline and follow-up</li><li>• Updated text to clarify blinding procedure, storage requirement of BIIB093, laboratory tests for safety assessments</li><li>• Qualified neurosurgical interventions (NSx) including decompressive craniectomy (DC) and requirement for imaging studies were clarified</li><li>• The images used to determine the primary endpoint and the timing of scans for contusion volume were clarified; timing for analysis requiring delayed intubation was clarified.</li></ul>
13 November 2022	<ul style="list-style-type: none"><li>• The study population was expanded to include participants indicated for surgery and those with survivable polytrauma facilitated by the removal of midline shift and injury severity score thresholds. The dosing time window was extended to 10 hours to allow for additional participants to be treated including inter-hospital transfers. An interim analysis was conducted by a separate unblinded team that facilitated an early start to Phase 3 planning while continuing the Phase 2 as a blinded study</li><li>• Clarified that exposure data from the 5 mg/day dose was the result of simulations</li><li>• Added text pertaining to scans in relation to IPH evacuation, DC, or CMO was added to the NCCT and MRI, optional NCCT scans</li><li>• Updated assessment language regarding MRI/NCCT</li><li>• Primary endpoint was amended to increase statistical power to detect a meaningful treatment effect while recognizing any reduction in contusion volume is desirable to detect</li><li>• The GOS-E at Day 180 was removed as an additional endpoint and added as one of the secondary endpoints. GOS-E at Day 90 was removed as a secondary endpoint and added as one of the additional endpoints</li><li>• Change in total contusion volume (hematoma plus perihematomal edema) from baseline to 24 hours was added as one of the secondary endpoints</li><li>• The additional endpoint stating the proportion of participants requiring NSx, including craniotomy and DC, was removed</li><li>• The new endpoint of proportion of participants requiring DC or IPH evacuation between 24 and 96 hours after trauma was added.</li></ul>

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

## Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Early termination of trial due to strategic considerations, not for efficacy or safety reasons.

Notes:
