Sponsors

Sponsor organisation name	University of Leicester
Sponsor organisation address	Research Governance Office, Research & Enterprise Office, University of Leicester, Leicester, United Kingdom,
Public contact	COPD-HELP Trial Manager, Leicester Clinical trials Unit, University of Leicester, 0044 01162297247, mepo@leicester.ac.uk
Scientific contact	Prof Christopher Brightling, Chief Investigator, Department of Respiratory Sciences, University of Leicester, 0044 0116 250 2704, ceb17@leicester.ac.uk

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 August 2024
Is this the analysis of the primary completion data?	Yes
Primary completion date	21 June 2024
Global end of trial reached?	Yes
Global end of trial date	14 March 2025
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective: To evaluate the efficacy of mepolizumab initiated during hospitalisation on future hospital readmission or death (all cause) compared with placebo in severe exacerbations of eosinophilic COPD.

The secondary objective: To assess the effects of mepolizumab on health status, well-being, exercise capacity, frailty, moderate exacerbations, healthcare usage, and death, compared with placebo in patients admitted to hospital with an eosinophilic exacerbation of COPD.

Protection of trial subjects:

Eligibility criteria for this trial were carefully considered to ensure the safety of the participants. Patients with respiratory conditions including active lung cancer, interstitial lung disease, primary pulmonary hypertension or any other conditions that in the view of the investigator will affect the trial were excluded from the trial. Cardiac safety was evaluated with monitoring of clinical assessments and investigations (heart rate, blood pressure, temperature), the collection of relevant AEs, and other assessments described in the protocol.

Serious Adverse Events (SAEs), Suspected Unexpected Serious Adverse Reaction (SUSARs) and deaths were subject to expedited reporting by the site to the Sponsor. Leicester CTU and the Sponsor provided safety updates to the Data Safety Monitoring Committee (DSMC) and Trial Steering Committee (TSC), who reviewed the trial data periodically, and GlaxoSmithKline (funder and supplier of the trial drug and placebo).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	07 September 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 238
Worldwide total number of subjects	238
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	71
From 65 to 84 years	160
85 years and over	7

Subject disposition

Recruitment

Recruitment details:

Trial participants were recruited from inpatient admissions to the Clinical Decisions Unit (CDU) at Glenfield Hospital, University Hospitals of Leicester NHS Trust.

Pre-assignment

Screening details:

Potential participants were screened against eligibility criteria. Pseudonymised data were recorded in the screening log. Eligible participants provided informed consent and were randomised. Ineligible or non-consenting participants were recorded as screen failures with reasons.

Period 1

Period 1 title	Baseline
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Assessor

Blinding implementation details:

Participants, investigators, and all involved in trial conduct, sample analysis, or with any other interest in this trial remained blind to the randomised treatment assignments until after final analysis is complete. Unblinded personnel included the trial statistician, the pharmacy team, trial personnel from the Respiratory BRC responsible for reconstituting the IMP/placebo, where applicable, and dosing the participants, and the DMC in order to periodically review trial data.

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Participants randomised to a matched placebo.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Sterile saline solution was used for the placebo for those dosed before 01 March 2024; from 01 March 2024, a matched placebo in a pre-filled syringe was used.

Arm title	Mepolizumab
------------------	-------------

Arm description:

Participants randomised to receive monthly subcutaneous injections of 100 mg mepolizumab.

Arm type	Experimental
Investigational medicinal product name	Mepolizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Dosing was undertaken every four weeks (+/- 7 days) over 48 weeks (12 doses in total), each consisting of 100mg of mepolizumab administered subcutaneously or for those dosed from 01 March 2024 to June 2024, solution for injection in pre-filled syringe administered.

Number of subjects in period 1	Placebo	Mepolizumab
Started	119	119
Completed	119	119

Period 2

Period 2 title	Week 4
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Assessor

Blinding implementation details:

Participants, investigators, and all involved in trial conduct, sample analysis, or with any other interest in this trial remained blind to the randomised treatment assignments until after final analysis is complete. Unblinded personnel included the trial statistician, the pharmacy team, trial personnel from the Respiratory BRC responsible for reconstituting the IMP/placebo, where applicable, and dosing the participants, and the DMC in order to periodically review trial data.

Statistical analyses

Statistical analysis title	Time to readmission or death Log Rank Test
Statistical analysis description:	
The analysis took place on the intention to treat population. The Cox proportional hazard model was used for the primary outcome of the time to re-hospitalisation or death (any cause) as the dependent variable. The treatment group served as an explanatory factor, while baseline MRC dyspnoea score (≤ 3 , > 3) and past hospitalisation in the previous 12 months (0, ≥ 1) were included as stratification factors.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events were collected for the duration of the study until the final trial visit (week 48/Final Follow-up) or 28 days post cessation of trial treatment where this occurs earlier than protocolised.

Adverse event reporting additional description:

Participants were asked about AEs at each study visits and they were recorded on a participant specific AE log.

SAEs/SUSARs: reported to Sponsor and Leicester CTU within 24 hours of research staff learning of the event.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
06 January 2020	<p>SA01:</p> <ul style="list-style-type: none">• Section viii Key Words – correction of Phase III to Phase IIb.• Section 7.7.4 Visit 13 – Reinstated urine pregnancy test that was removed in version 3.0. This is required at end of IMP exposure.• Section 8.11 – Addition to final sentence of 3rd paragraph to clarify requirement for urine pregnancy test at Visit 13.• Appendix 1 – add urine pregnancy test to Visit 13 in schedule procedures.• Appendix 1 – correction to safety & tolerability measures. AE/SAEs were removed in error in previous version with the removal of safety blood samples from visits 5&6, 8&9, 11&12. These have now been reinstated.
06 March 2020	<p>SA02:</p> <ul style="list-style-type: none">• Section 7.2 Informed Consent – Amendment made to first sentence of second paragraph to include participants that may be admitted and discharged within one week. Wording changed from 'Due to the nature of the study (acute illness resulting in hospitalisation), the participant can be consented at any point within their inpatient stay, or within one week of their index hospital admission' to 'Due to the nature of the study (acute illness resulting in hospitalisation), the participant can be consented at any point within their inpatient stay, or within one week of discharge'.• Section 7.2.1 – Title amended from 'Additional consent for biological specimens' to 'Additional consent for biological specimens and future research'. 'Anonymised' changed to 'pseudonymised'. Additional paragraph included to describe the linking of outcomes of this trial with environmental exposure listed in the optional section of the Informed Consent Form. The PIS has also been amended to reflect this as it was removed in error during the response to the Provisional Opinion.• Appendix 1 Schedule of procedures – reinstatement of safety blood samples from visits 5&6, 8&9, 11&12 that were removed in error in Protocol version 3.0 (17/10/2019) as part of the response to Provisional Opinion. These have been reinstated to correct the inconsistency with the body text (Section 7.7.3).

21 June 2021	<p>SA03:</p> <ul style="list-style-type: none"> • Section 9.2 - SAEs will be reported following first administration of IMP/placebo rather than following consent. Section 9.1 – clarification provided on events that are clinical outcomes. Section 9.3 – the causality and relatedness assessment may be performed by the PI or a suitably trained delegate (does not require an unblinded doctor). Section 9.4 - clarification provided on notification of deaths. • Section 6.1 and trial summary table: > has been changed to \geq for the following inclusion criterion: '4. Smoking pack years \geq 10 years'. • Section 7.7.1 & Appendix 1 - the current (exacerbated state) eMRC score is to be collected at visit 1 in addition to their baseline eMRC score (stable state). • Sections 7.7, 7.8 & Appendix 1 – Clarification that trial assessments (e.g. Quality of Life/Symptoms Assessments) may be completed remotely by telephone consultation, where possible, and when necessary. • Section 7.10 – Pandemic guidance section added. • Sections 3.4.3 and 7.9 – corrections confirming DNA for analysis will only be taken from blood samples at week 0; RNA analysis will occur on blood samples taken at weeks 0, 4, 8, 12, 24, 36, 48. • Section 7.9 - correction to confirm blood tests for Trop I and BNP blood are not stored for the purposes of the study and are either used or destroyed during the testing process. • Section 13.5 - protocol deviations are not required for instances where a participant is unable to produce a sample or for assessments omitted due to a pandemic. • Section 7.7.4 - participants that have discontinued treatment early (prior to visit 12) will be invited back to hospital for visit 13 assessments.
04 July 2022	<p>SA04:</p> <p>There have been several occasions where participants have missed trial visits without contacting the research team, and the research team has been unable to contact the participant by telephone within the window for their visit, if at all. A number of participants have been discontinued because of this, and the research team suggested if they tried writing to the participant for a response, they could demonstrate that every effort had been made to retain them. Therefore a participant contact letter has been devised for this purpose. It has been made clear within the letter that participants are free to discontinue without giving a reason, and that their decision to discontinue will not affect the standard of medical care they receive.</p>
26 October 2022	<p>SA05:</p> <ul style="list-style-type: none"> • Removal of COVID-19 omitted procedures: <ul style="list-style-type: none"> o Faecal sample o Post-BD (FEV1/FVC) Spirometry o Oscillometry o Breath volatile organic compounds o Induced sputum samples o Throat swab (viral PCR) o Nasal epithelial sampling • Clarification that only spontaneous sputum samples are collected as part of standard care • Update to study timelines (recruitment, total study duration) in line with funding extension • Update to wording around indemnity (section 13.10) per Sponsor's request • Update to statistician information

06 February 2023	<p>SA06:</p> <ul style="list-style-type: none"> Truncated follow-up for participant recruitment from April 2023 added to protocol and all applicable sections (schedule of events, etc.) amended to reflect new follow-up schedule Visit 13 also named Final Follow-up for those in the truncated follow-up phase of the trial; patients recruited from April 2023 to September 2023 will be consented to a truncated follow-up model, whereby last patient last visit will remain the same. This will result in participants consented in April to have up to the 44-week follow-up, those in May will have up to the 40-week follow-up, and so on. Patients will be dosed for a minimum of 24 weeks, with secondary outcomes measured as per original timelines (baseline, 4 weeks, 8 weeks, etc.) however final outcome measures normally measured at 48 weeks will occur 4 weeks \pm 7 days of final dosing visit.
12 September 2023	<p>SA07:</p> <p>Change to IMP constitution for participants dosed from 01 March 2024 due to funder stock supplies; IMP changed from mepolizumab powder reconstituted to mepolizumab in a pre-filled syringe. Dosing and regime to remain the same - updated details in protocol and new SmPC for drug constitution.</p>
22 January 2024	<p>SA08:</p> <p>Submission for the approval of the new IMP constitution and matched placebo following GNA for SA07 from the MHRA. The change of IMP from a powder reconstituted to a pre-filled syringe, with the placebo changed from saline to a pre-filled syringe matched placebo, was previously submitted and approved by REC via SA07. This SA08 is to re-submit for approval protocol v9.0 12-09-2023, PIS v2.0 12-09-2023 and Nucala 100mg SMPC (23/05/2023), all of which are unchanged from SA07. The newly included documents address the GNA of the MHRA and include the cross-referral letter for placebo IMPD, and labels for new IMP and placebo syringes.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
