

Clinical trial results: Efficacy of MVA-NP+M1 in the influenza H3N2 Human Challenge model Summary

EudraCT number	2018-004015-49
Trial protocol	BE
Global end of trial date	17 April 2020

Results information

Result version number	v1 (current)
This version publication date	23 December 2020
First version publication date	23 December 2020

Trial information

Trial identification

Sponsor protocol code	FLU010

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	17 April 2020
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	17 April 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study is to show that MVA-NP+M1 decreases the viral shedding of influenza virus, as measured by the cumulative area under the curve, following human challenge.

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and the International Council for Harmonization of Technical Requirements for Pharmaceuticals for Human Use (ICH) Note for Guidance on Good Clinical Practice (GCP) (CPMP/ICH/135/95) and with applicable local requirements.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	02 May 2019
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	6 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 145
Worldwide total number of subjects	145
EEA total number of subjects	145

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	145
From 65 to 84 years	0

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

The study was conducted at the SGS Clinical Pharmacology Unit in Antwerp, Belgium

Pre-assignment

Screening details:

Eight-hundred and nineteen (819) subjects were screened. One hundred and forty-five (145) subjects were actually enrolled and vaccinated.

The study consisted of an outpatient vaccination phase and at least 6 weeks later an inpatient challenge phase.

Period 1

Period 1 title	Overall (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Assessor

Blinding implementation details:

Since MVA-NP+M1 has a cloudy appearance compared to saline Placebo, a label surrounded the syringes to maintain the blind. The syringes were transported from the pharmacy to the vaccination room in opaque containers to keep the study treatment blinded from the site staff and the study participants. The dedicated unblinded dosing team was assigned for the vaccine administration. The participant receiving the placebo was asked to look away from the injection site to keep the blind

Arms

Are arms mutually exclusive?	Yes
Arm title	MVA-NP+M1

Arm description:

MVA-NP+M1 & H3N2 Challenge

Arm type	Experimental
Investigational medicinal product name	MVA-NP+M1
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Single dose of MVA-NP+M1 at 1.5×10^8 plaque forming unit, 0,5 mL given intramuscularly in the deltoid.

Arm title	Placebo
------------------	---------

Arm description:

Placebo & H3N2 Challenge

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Saline Placebo 0,5 mL given intramuscularly in the deltoid.

Number of subjects in period 1	MVA-NP+M1	Placebo
Started	87	58

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Treatment-emergent adverse events (TEAE) are defined as AEs starting during or after first administration of any study drug.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
19 April 2019	<ul style="list-style-type: none">- Additional timepoints in challenge period to measure transcriptomics. Sodium and potassium tests were added to the biochemistry test in the challenge period.- The exclusion criteria were split in two categories i.e., study entry and challenge period entry.- The process that maintains the double blind throughout the study was amended to provide a robust procedure.
17 July 2019	<ul style="list-style-type: none">- MNT increased from ≤ 10 to < 20.- Attack rate change from 90% to 83%.- A clarification added the challenge risk section.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
