Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	21 May 2021
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	21 May 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to assess the efficacy of 30 mg of BAY1753011, with or without furosemide, versus furosemide alone in patients with heart failure (HF) and objective evidence of congestion

Protection of trial subjects:

The conduct of this clinical study met all local legal and regulatory requirements. The study was conducted in accordance with ethical principles that have their origin in the Declaration of Helsinki and the International Council for Harmonization guideline E6: Good Clinical Practice. Before entering the study, the informed consent was read by and explained to all the subjects. Participating subjects signed informed consent form and could withdraw from the study at any time without any disadvantage and without having to provide a reason for this decision. Only investigators qualified by training and experience were selected as appropriate experts to investigate the study drug.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	29 May 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Austria: 28
Country: Number of subjects enrolled	Bulgaria: 76
Country: Number of subjects enrolled	Spain: 24
Country: Number of subjects enrolled	Greece: 88
Country: Number of subjects enrolled	Hungary: 63
Country: Number of subjects enrolled	Israel: 47
Country: Number of subjects enrolled	Italy: 36
Country: Number of subjects enrolled	Poland: 108
Country: Number of subjects enrolled	Portugal: 12
Worldwide total number of subjects	482
EEA total number of subjects	435

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	147
From 65 to 84 years	327
85 years and over	8

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 66 study centers in 9 countries from 29 May 2019 (first subject first visit) to 21 May 2021 (last subject last visit).

Pre-assignment

Screening details:

522 subjects signed informed consent; 39 subjects did not complete screening. Most common reasons for not completing screening were screen failure (26 subjects); withdrawal by subject (6 subjects). 483 subjects were randomized, 1 subject withdrew consent before treatment allocation. 482 subjects received treatment.

Period 1

Period 1 title	Part A
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Part A: Arm 1 (BAY 1753011 + SoC)

Arm description:

Subjects were randomized in Part A to receive Pecavaptan (BAY1753011) 30mg once daily (in the morning) in addition to standard of care (SoC) for 30 days in Part A.

Arm type	Experimental
Investigational medicinal product name	Pecavaptan
Investigational medicinal product code	BAY 1753011
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

30mg once daily in the morning from Day 1 to Day 30

Arm title	Part A: Arm 2 (Placebo + SoC)
------------------	-------------------------------

Arm description:

Subjects were randomized in Part A to receive Placebo once daily (in the morning) in addition to standard of care (SoC) for 30 days in Part A.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Once daily in the morning from Day 1 to Day 30

Number of subjects in period 1	Part A: Arm 1 (BAY 1753011 + SoC)	Part A: Arm 2 (Placebo + SoC)
Started	242	240
Completed	214	206
Not completed	28	34
Consent withdrawn by subject	5	5
Physician decision	-	1
Adverse event, non-fatal	11	6
Other	6	10
Death	1	3
Non-compliance with study drug	-	7
Physician decision: covid-19 pandemic related	1	-
Lost to follow-up	1	-
Protocol deviation	3	1
Subject decision: covid-19 pandemic related	-	1

Period 2

Period 2 title	Part B+ Part A extension
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Part B: Arm 1 (BAY 1753011 + SoC)

Arm description:

Subjects received 30mg Pecavaptan (BAY1753011) orally once daily (in the morning) in addition to standard of care (SoC) in Part A. Following completion of Part A, a second randomization was conducted. Subjects who fulfilled eligibility criteria for Part B received 30 mg Pecavaptan (BAY1753011) orally once daily (in the morning) in addition to standard of care (SoC) in Part B.

Arm type	Experimental
Investigational medicinal product name	Pecavaptan
Investigational medicinal product code	BAY 1753011
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

30mg once daily in the morning from Day 30 to Day 60

Arm title	Part B: Arm 1-A (BAY 1753011)
------------------	-------------------------------

Arm description:

Subjects received 30mg Pecavaptan (BAY1753011) orally once daily (in the morning) in addition to standard of care (SoC) in Part A. Following completion of Part A, a second randomization was conducted. Subjects who fulfilled eligibility criteria for Part B received Pecavaptan (BAY1753011) 30mg in addition

to Placebo Furosemide 80mg orally once daily (in the morning) for 30 days in Part B. In part B, the dose modifications were allowed based on the investigator assessment. Subjects received Pecavaptan (BAY1753011) 15mg in addition to Placebo Furosemide 40mg orally once daily (in the morning) for 30 days.

Arm type	Experimental
Investigational medicinal product name	Pecavaptan
Investigational medicinal product code	BAY 1753011
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

30mg once daily in the morning from Day 30 to Day 60

Investigational medicinal product name	Placebo Furosemide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Matching placebo, oral tablet, once daily in the morning from Day 30 to Day 60

Arm title	Part B: Arm 2-A (BAY 1753011)
------------------	-------------------------------

Arm description:

Subjects received placebo orally once daily (in the morning) in addition to standard of care (SoC) in Part A. Following completion of Part A, a second randomization was conducted. Subjects who fulfilled eligibility criteria for Part B received Pecavaptan (BAY1753011) 30mg in addition to Placebo Furosemide 80mg orally once daily (in the morning) for 30 days in Part B. In part B, the dose modifications were allowed based on the investigator assessment. Subjects received Pecavaptan (BAY1753011) 15mg in addition to Placebo Furosemide 40mg orally once daily (in the morning) for 30 days.

Arm type	Experimental
Investigational medicinal product name	Placebo Furosemide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Matching placebo, oral tablet, once daily in the morning from Day 30 to Day 60

Investigational medicinal product name	Pecavaptan
Investigational medicinal product code	BAY 1753011
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

30mg once daily in the morning from Day 30 to Day 60

Arm title	Part B: Arm 1-B (Furosemide)
------------------	------------------------------

Arm description:

Subjects received 30mg Pecavaptan (BAY1753011) orally once daily (in the morning) in addition to standard of care (SoC) in Part A. Following completion of Part A, a second randomization was conducted. Subjects who fulfilled eligibility criteria for Part B received Furosemide (80mg) in addition to Placebo BAY1753011 30mg once daily (in the morning) for 30 days in Part B. In part B, the dose modifications were allowed based on the investigator assessment. Subjects received Furosemide (40mg) in addition to Placebo BAY1753011 15mg once daily (in the morning) for 30 days.

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: 420 subjects completed Part A were screened for eligibility for Part B. A total of 286 subjects who completed Part A were eligible for part B AND were randomized to Part B treatment. In total, 134 subjects were ineligible for Part B, 115 subjects of them continued treatment of Part A for a further 30 days and followed the same schedule as subjects eligible for Part B.

Statistical analyses

Statistical analysis title	Arm1 VS Arm 2
----------------------------	---------------

Statistical analysis description:

The imputation model used to generate complete data sets was an ANCOVA with treatment, baseline value, and measurement at Visit 3 (Day 7) as covariates. Information from all subjects was used to fit the imputation model. To use the regression method, the pattern of missingness needed to be monotone.

Total of 482 subjects were included into statistical analyses.

Comparison groups	Part A: Arm 1 (BAY 1753011 + SoC) v Part A: Arm 2 (Placebo + SoC)
Number of subjects included in analysis	398
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.0001 ^[3]
Method	ANCOVA
Parameter estimate	least squares means difference
Point estimate	-0.26
Confidence interval	
level	95 %
sides	1-sided
upper limit	-0.203

Notes:

[3] - Point estimates and 95% one-sided confidence intervals were tabulated including the p-value for the one-sided test decision for $\alpha = 5\%$

Primary: Change in body weight between Day 30 and Day 60 (Part B)

Statistical analyses

Statistical analysis title	BAY 1753011 Monotherapy VS Furosemide Monotherapy
----------------------------	---

Statistical analysis description:

The primary endpoints were analyzed in the mFAS population using ANCOVA. Analysis included covariates Part B treatment (BAY 1753011 monotherapy vs. furosemide monotherapy), Part A treatment and Baseline30 value. The significance level was 20% one-sided, due to the early development phase of this study. The estimated effect on Visit 10 (Day 60) was taken from the model.

Comparison groups	BAY 1753011 Monotherapy (ARM 1-A + ARM 2-A) v Furosemide Monotherapy (ARM 1-B + ARM 2-B)
Number of subjects included in analysis	204
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[12]
P-value	= 0.157
Method	ANCOVA
Parameter estimate	least squares means difference
Point estimate	0.687

Confidence interval	
level	Other: 80 %
sides	1-sided
upper limit	0.949

Notes:

[12] - For the noninferiority test, the one-sided 80% - confidence interval for treatment difference (BAY 1753011 monotherapy vs. furosemide monotherapy) was derived from the model. For body weight, non-inferiority could be concluded, if the upper bound of the one-sided 80% - confidence interval was below the non-inferiority margin 1kg.

Primary: Change in serum creatinine between Day 1 and Day 30 (Part A)

Secondary: Number of Treatment-emergent adverse event (TEAE) (including serious adverse event)

End point title	Number of Treatment-emergent adverse event (TEAE) (including serious adverse event)
-----------------	--

End point description:

An Adverse event (AE) was any untoward medical occurrence in a patient or clinical study subject, associated with the use of study drug, whether or not considered related to the study drug. TEAEs are defined as AEs that occurred or worsened after the first dose of study drug up to 7 days after the date of the last dose of study drug. A serious AE (SAE) was defined as any untoward medical occurrence that, at any dose: Resulted in death; Was life-threatening; Required inpatient hospitalization or prolongation of existing hospitalization; Resulted in persistent disability/incapacity; Was a congenital anomaly/birth defect; Other situations such as important medical events that may not have been immediately life-threatening or resulted in death or hospitalization but may have jeopardized the subject or may have required medical or surgical intervention to prevent one of the outcomes listed above.

Gastrointestinal disorders			

Dry mouth subjects affected / exposed occurrences (all)	2 / 63 (3.17%) 6	0 / 42 (0.00%) 0	1 / 51 (1.96%) 1
Respiratory, thoracic and mediastinal disorders Dyspnoea subjects affected / exposed occurrences (all)	2 / 63 (3.17%) 2	0 / 42 (0.00%) 0	1 / 51 (1.96%) 1
Renal and urinary disorders Acute kidney injury subjects affected / exposed occurrences (all)	0 / 63 (0.00%) 0	0 / 42 (0.00%) 0	0 / 51 (0.00%) 0
Metabolism and nutrition disorders Hyperkalaemia subjects affected / exposed occurrences (all)	7 / 63 (11.11%) 7	1 / 42 (2.38%) 1	0 / 51 (0.00%) 0

Non-serious adverse events	Part B: ARM 2-A (BAY 1753011)		
Total subjects affected by non-serious adverse events subjects affected / exposed	16 / 52 (30.77%)		
Vascular disorders Hypotension subjects affected / exposed occurrences (all)	0 / 52 (0.00%) 0		
Cardiac disorders Cardiac failure subjects affected / exposed occurrences (all)	6 / 52 (11.54%) 7		
Nervous system disorders Headache subjects affected / exposed occurrences (all)	0 / 52 (0.00%) 0		
General disorders and administration site conditions Thirst subjects affected / exposed occurrences (all)	1 / 52 (1.92%) 1		
Gastrointestinal disorders			

Dry mouth subjects affected / exposed occurrences (all)	5 / 52 (9.62%) 5		
Respiratory, thoracic and mediastinal disorders Dyspnoea subjects affected / exposed occurrences (all)	3 / 52 (5.77%) 6		
Renal and urinary disorders Acute kidney injury subjects affected / exposed occurrences (all)	0 / 52 (0.00%) 0		
Metabolism and nutrition disorders Hyperkalaemia subjects affected / exposed occurrences (all)	4 / 52 (7.69%) 4		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
20 May 2019	1) Local laboratory samples (chemistry: serum creatinine, eGFR, potassium, sodium) were added for safety reasons, with regard to the investigational medicinal products (IMPs) potential e.g. to change serum electrolytes and for early detection of discontinuation criteria. 2) Local laboratory assessments before and 22-24 hours after the first study drug dose were included for Visit 2 and unscheduled visit as requested by the Data Monitoring Committee (DMC). 3) Additional drug accountability after 1 week of study drug dispensation (Visits 3 and 7) was removed from the protocol to reduce the burden on the sites. 4) Ability to understand and follow study-related instructions as a documented decision of the investigator was added in the inclusion criteria. 5) Exclusion criterion #1 (body weight > 150 kg at screening) was replaced by Body Mass Index (BMI) value < 18.5 kg/m ² or > 35 kg/m ² .
08 November 2019	1) Inclusion criterion #8 for lower threshold of loop diuretic doses (average/usual total daily dose of loop diuretic ≥ 40 mg of furosemide or equivalent, within 4 weeks prior to index hospitalization) was added in order to increase the randomization into Part B of the trial. 2) Inclusion criterion #9C for the composite congestion score (CCS) was capped in case approximately 40% of subjects were to be randomized based on this single criterion, to keep a diverse study population. 3) Composite congestion score (CCS) threshold in inclusion criterion #9C was changed from ≥ 2 to ≥ 3, to increase randomization into Part B. 4) The number of replications of the regression method was reduced from 10000 to 100, to reduce the run time of the statistical analyses.
29 June 2020	1) Sample size was increased to approximately 640 subjects to be screened and 570 subjects to be randomized in order to achieve 280 completers at the end of Part B, to compensate the increased number of discontinuations during the COVID-19 pandemic. 2) Benefit/risk statement regarding additional risks to trial participants and risk mitigation measures was added to explain the risks associated with the COVID-19 pandemic.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
