Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 April 2024
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	05 October 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the efficacy of 3 once daily (QD) dose levels of PF-06700841 compared to placebo in participants with active SLE.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Council for Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trials participants were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	18 April 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 4
Country: Number of subjects enrolled	Canada: 3
Country: Number of subjects enrolled	Czechia: 6
Country: Number of subjects enrolled	Germany: 1
Country: Number of subjects enrolled	France: 2
Country: Number of subjects enrolled	Hungary: 10
Country: Number of subjects enrolled	Japan: 19
Country: Number of subjects enrolled	Belgium: 3

Country: Number of subjects enrolled	Romania: 11
Country: Number of subjects enrolled	Taiwan: 17
Country: Number of subjects enrolled	Ukraine: 33
Country: Number of subjects enrolled	United Kingdom: 5

Country: Number of subjects enrolled	Mexico: 51
Country: Number of subjects enrolled	United States: 70
Country: Number of subjects enrolled	Greece: 4
Worldwide total number of subjects	350
EEA total number of subjects	96

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	341
From 65 to 84 years	9
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 350 participants with active SLE were enrolled and randomized in the study.

Pre-assignment

Screening details:

The study was conducted at approximately 185 sites in the 24 countries from 18 April 2019 to 05 October 2023.

Period 1

Period 1 title	Treatment Period (TP) (52 Weeks)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Participants were randomised to receive placebo matched to PF-06700841 QD for 52 weeks. Participants were followed up for 4 weeks after last dose.

Arm type	Placebo
Investigational medicinal product name	PF-06700841
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received placebo matched to PF-06700841 QD for 52 weeks.

Arm title	PF-06700841 15 mg
------------------	-------------------

Arm description:

Participants were randomised to receive PF-06700841 15 milligram (mg) tablets orally QD for 52 weeks. Participants were followed up for 4 weeks after last dose.

Arm type	Experimental
Investigational medicinal product name	PF-06700841
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received PF-06700841 15 mg QD for 52 weeks.

Arm title	PF-06700841 30 mg
------------------	-------------------

Arm description:

Participants were randomised to receive PF-06700841 30 mg tablets orally QD for 52 weeks. Participants were followed up for 4 weeks after last dose.

Arm type	Experimental

Primary: Percentage of Participants Achieving SLE Responder Index (SRI) Change of 4 (SRI-4) at Week 52

End point title	Percentage of Participants Achieving SLE Responder Index (SRI) Change of 4 (SRI-4) at Week 52
End point description: SRI-4 components: SLEDAI-2K, BILAG 2004 and PhGA. Participants were classified as SRI-4 responders, if they met all of criteria compared with baseline: 1) ≥ 4 point reduction in SLEDAI-2K score; 2) no new BILAG A organ domain score or 2 new BILAG B organ domain scores; 3) no worsening < 0.3 point increase in PhGA score. SLEDAI-2K: assesses improvement in disease activity (range: 0 to 105; higher score = higher severity). BILAG: assesses disease extent, severity in individual organ system (range: A [severe] to E [no disease]; higher score = less severity). PhGA: assesses worsening in participant's general health status (range: 0 [none] to 3 [severe]; higher score = higher severity). Full analysis set (FAS): all participants randomly assigned to study intervention and have received at least 1 dose of study intervention. Here "Number of Subjects Analyzed" signifies participants at Week 52 with Non-Responder Imputation (NRI) and Last Observation Carried Forward from Week 48 (LOCF48) applied.

Secondary: Percentage of Participants Achieving British Isles Lupus Assessment Group-Based Composite Lupus Assessment (BICLA) at Week 52

End point title	Percentage of Participants Achieving British Isles Lupus Assessment Group-Based Composite Lupus Assessment (BICLA) at Week 52
-----------------	---

End point description:

BICLA included: BILAG-2004, SLEDAI-2K and PhGA. Participants were classified as responders, if they met all the following criteria: BILAG-2004 improvement (all A scores at baseline improved to B/C/D and all B scores improved to C or D); no worsening in disease activity (no new BILAG-2004 A scores or =<1 new B score); no worsening of total SLEDAI-2K score; no significant deterioration (<10 percent [%] worsening) in analogue PhGA. SLEDAI-2K: assesses improvement in disease activity (range: 0 to 105; higher score = higher severity). BILAG: assesses disease extent, severity in individual organ system (range: A [severe] to E [no disease]; higher score = less severity). PhGA: assesses worsening in participant's general health status (range: 0 [none] to 3 [severe]; higher score = higher severity). FAS was included. Secondary: Percentage of Participants With $\geq 50\%$ Reduction in Cutaneous Lupus Erythematosus Disease Area and Severity Index Activity (CLASI-A) Score at Week 52 in Participants With Baseline CLASI-A Score ≥ 10

End point title	Percentage of Participants With $\geq 50\%$ Reduction in Cutaneous Lupus Erythematosus Disease Area and Severity Index Activity (CLASI-A) Score at Week 52 in Participants With Baseline CLASI-A Score ≥ 10
-----------------	--

End point description:

CLASI is an validated measurement instrument for lupus erythematosus developed for use in clinical studies that consists of separate scores for the activity of the disease (CLASI-A). The CLASI activity score is calculated on the basis of erythema, scale/hyperkeratosis, mucous membrane involvement, acute hair loss and non-scarring alopecia. The CLASI activity score ranges from 0-70, with higher scores indicating more severe skin disease. Severity categories based on the CLASI activity score are as follows: mild (0-9), moderate (10-20), and severe (21-70). FAS included all participants randomly assigned to study intervention and have received at least 1 dose of study intervention. Number of participants in FAS with baseline CLASI-A score ≥ 10 were analyzed. Here, "Number of Subjects Analyzed" signifies participants at Week 52 with NRI applied.

End point title	Change From Baseline in Total Scores of Functional Assessment of Chronic Illness Therapy-Fatigue (FACIT-F) at Week 52
-----------------	---

End point description:

The
FACIT-F

Scale is a participant completed questionnaire consisting of 13 items that assess fatigue. Participants responded to each item on a 5-point scale based on their experience of fatigue during the past 7 days (0 = not at all; 1 = a little bit; 2 = somewhat; 3 = quite a bit; 4 = very much). Instrument scoring yielded a range from 0 to 52 (negatively worded items were reversed during analysis), with higher scores representing better participant status (less fatigue). FAS included all participants randomly assigned to study intervention and have received at least 1 dose of study intervention. Here, "Number of Subjects Analyzed" signifies participants evaluable with observed data at Week 52.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
02 March 2021	The following modifications were made to PA4 as a result of the updated PF-06700841 Investigational Brochure (IB). The following changes were added and/or modified to the overview of the MoA and the safety profile of the product: Section 2.2.2. Clinical Overview Added study C2501007, an ongoing study in hidradenitis suppurativa. Updated to include additional guidance to the sites to encourage randomized participants to remain in the study at least through to the end of the double-blind period to complete safety and efficacy assessments.
28 September 2021	The overall rationale for B7931028 protocol amendment 6 is to address the Quantiferon gold test results which are not negative. The amendment will allow specific safety monitoring to be put into place to allow participants with latent TB (not active TB) to be eligible for the B7931028 study provided the protocol criteria can be met. China is having the biggest impact on enrolling participants into the study because of this eligibility criteria; however, once the next global protocol amendment is required, this language will be added as well.
06 June 2022	The overall rationale for B7931028 Protocol Amendment 7 is to decrease the sample size for the study from 448 participants to 350 participants, and to allow eligibility of participants with latent TB (positive quantiferon gold tests) who agree to receiving treatment with INH and Vitamin B6. This amendment also included the administrative changes made in Protocol Amendment 5 (requested during the EU Voluntary Harmonization Procedure (VHP) review of Amendment 4, countries submitting their initial clinical trial application with Amendment 5 (Italy and Argentina), and to any country requiring new protocol amendments to be submitted (Taiwan); and Protocol Amendment 6 (China only amendment) to be globally implemented. Furthermore, this change will allow specific safety monitoring to be put into place to allow participants with latent TB (not active TB) to be eligible for the study provided the protocol inclusion/exclusion criteria can be met.
15 June 2023	The driver for B7931028 Protocol Amendment 8 is to modify the key secondary endpoint of 'time to first severe SLE flare' and replace it with an exploratory endpoint of 'BICLA response at Week 52'. 'Time to first severe SLE flare' will remain as a secondary endpoint, just not the 'key' secondary endpoint and the data will be summarized as a secondary endpoint. The estimands for the associated endpoints have been updated to reflect these changes. E2, has been updated to align with the revised 'Key' secondary endpoint of 'BICLA response at Week 52' as was E7, the estimand for 'time to first severe SLE flare'.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

For the PF-06700841 30 mg, there was a total of 1 death which was reported in both on-treatment and follow-up phases in subject disposition section.

Notes:
