Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	20 October 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	20 October 2023
Global end of trial reached?	Yes
Global end of trial date	20 October 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to assess and compare the efficacy and safety of sacituzumab govitecan-hzi versus treatment of physician's choice (TPC) in participants with hormonal receptor-positive (HR+) human epidermal growth factor receptor 2 (HER2-) negative metastatic breast cancer (MBC).

Protection of trial subjects:

The protocol and consent/assent forms were submitted by each investigator to a duly constituted Independent Ethics Committee (IEC) or Institutional Review Board (IRB) for review and approval before study initiation. All revisions to the consent/assent forms (if applicable) after initial IEC/IRB approval were submitted by the investigator to the IEC/IRB for review and approval before implementation in accordance with regulatory requirements. This study was conducted in accordance with recognized international scientific and ethical standards, including but not limited to the International Conference on Harmonization guideline for Good Clinical Practice (ICH GCP) and the original principles embodied in the Declaration of Helsinki.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	08 May 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Country: Number of subjects enrolled	Netherlands: 8
Country: Number of subjects enrolled	Spain: 69
Country: Number of subjects enrolled	United Kingdom: 14
Country: Number of subjects enrolled	United States: 228
Worldwide total number of subjects	543
EEA total number of subjects	300

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	403
From 65 to 84 years	139
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

Participants were enrolled at study sites in Belgium, Canada, France, Germany, Italy, the Netherlands, Spain, the United Kingdom, and the United States.

Pre-assignment

Screening details:

776 participants were screened.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Sacituzumab Govitecan

Arm description:

Participants received sacituzumab govitecan 10 mg/kg of body weight, administered as a slow intravenous (IV) infusion on Days 1 and 8 of a 21-day treatment cycle until progression of disease, occurrence of unacceptable adverse events (AEs), or another treatment discontinuation criterion was met (up to 40.1 months).

Arm type	Experimental
Investigational medicinal product name	Sacituzumab govitecan
Investigational medicinal product code	
Other name	IMMU-132, Trodelvy®
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

10 mg/kg of body weight, administered as a slow intravenous (IV) infusion either by gravity or with an infusion pump.

Arm title	Treatment of Physician's Choice (TPC)
------------------	---------------------------------------

Arm description:

Participants received TPC (eribulin, capecitabine, gemcitabine, or vinorelbine) as single-agent treatment determined by investigator before participant randomization until progression of disease, occurrence of unacceptable AEs, or another treatment discontinuation criterion was met. Dosing per National Comprehensive Cancer Network guidelines (with dose modifications for if toxic)

- Eribulin was administered IV at dose 1.4 mg/m² at North American sites; 1.2 mg/m² at European sites on Days 1 and 8 of a 21-day cycle (up to 22.5 months).
- Capecitabine 1000 to 1250 mg/m² was administered in a 21-day cycle, with capecitabine administered orally twice daily for 2 weeks followed by 1-week rest period (up to 12.9 months).
- Gemcitabine 800 to 1200 mg/m² was administered IV on Days 1, 8, and 15 of a 28-day cycle (up to 22.3 months).
- Vinorelbine 25 mg/m² was administered as weekly IV injection (up to 8.1 months) and was not allowed as TPC for any participant with Grade 2 neuropathy

Arm type	Active comparator
Investigational medicinal product name	Eribulin
Investigational medicinal product code	
Other name	Halaven
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Eribulin was administered IV at a dose 1.4 mg/m² at North American sites and 1.23 mg/m² at

European sites.

Investigational medicinal product name	Vinorelbine
Investigational medicinal product code	
Other name	Navelbine
Pharmaceutical forms	Concentrate for solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Vinorelbine 25 mg/m² was administered as a weekly IV injection.

Investigational medicinal product name	Gemcitabine
Investigational medicinal product code	
Other name	Gemzar
Pharmaceutical forms	Powder for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Gemcitabine 800 to 1200 mg/m² was administered IV.

Investigational medicinal product name	Capecitabine
Investigational medicinal product code	
Other name	Xeloda
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Capecitabine 1000 to 1250 mg/m² was administered orally twice daily for 2 weeks followed by 1-week rest period.

Primary: Progression-Free Survival (PFS) by Blinded Independent Central Review (BICR) Assessment

End point title	Progression-Free Survival (PFS) by Blinded Independent Central Review (BICR) Assessment
-----------------	---

End point description:

PFS was defined as the time from the date of randomization to the date of the first documentation of disease progression or death (whichever occurred first) according to BICR using Response Evaluation Criteria in Solid Tumors version 1.1 (RECIST 1.1). Disease progression was defined as an increase of greater than 20% in the sum of the longest diameter (LD) of target lesions and a 5 mm absolute increase, taking as a reference the smallest sum LD recorded since the baseline assessment or the appearance of new non-target lesions. PFS was estimated using Kaplan-Meier estimate. The ITT Population included all participants who were randomized, regardless of whether they received study treatment or not.

Secondary: Objective Response Rate (ORR) by BICR and Local Investigator Review (LIR) Assessment

End point title	Objective Response Rate (ORR) by BICR and Local Investigator Review (LIR) Assessment
-----------------	--

End point description:

ORR was defined as the percentage of participants who had the best overall response of either complete response (CR) or partial response (PR) that was confirmed at 4 weeks or later after initial response by BICR and LIR using RECIST 1.1. CR: Disappearance of all target and non-target lesions; and normalization of tumor marker levels initially above upper limits of normal; PR: $\geq 30\%$ decrease in the sum of the LD of target lesions, taking as reference the baseline sum LD. Participants in the ITT Population with available data were analyzed.

Secondary: Time to Deterioration (TTD) of Global Health Status/Quality of Life (QoL) Scale as Measured by European Organization for Research and Treatment of Cancer Quality of Life for Cancer Patients, Core Questionnaire Version 3.0 (EORTC QLQ-C30)

End point title	Time to Deterioration (TTD) of Global Health Status/Quality of Life (QoL) Scale as Measured by European Organization for Research and Treatment of Cancer Quality of Life for Cancer Patients, Core Questionnaire Version 3.0 (EORTC QLQ-C30)
-----------------	---

End point description:

TTD was defined as the time from randomization to the first date a subject achieves 10-point deterioration from baseline in the global health status/QoL scale. The EORTC QLQ-C30 is a 30-item questionnaire to assess QoL of cancer patients. Responses to global health status, 'How would you rate your overall health during the past week?' (Item 29) and the QoL 'How would you rate your overall quality of life during the past week?' (Item 30) questions were scored on 7-point scale (1=very poor; 7=excellent). All scales and single-item measures range in score from 0 to 100. Summed raw scores were standardized by linear transformation so that scores ranged from 0 to 100. Higher scores for GHS show a better level of functioning. The HRQOL-Evaluable Population included all participants who had an evaluable assessment at baseline and at least 1 evaluable assessment at postbaseline visits. Participants with a baseline global health status/QoL score ≥ 10 were analyzed.

Secondary: TTD of Pain Score as Measured by EORTC QLQ-C30

End point title	TTD of Pain Score as Measured by EORTC QLQ-C30
End point description:	
TTD was defined as the time from randomization to the first date a subject achieves 10-point deterioration from baseline in the pain score. The EORTC QLQ-C30 is a questionnaire to assess quality of life, it is composed of 30 questions(items) resulting in functional scales, global health status scale, 3 symptom scales, and 6 single items. All of the scales and single-item measures range in score from 0 to 100. Participant responses to 2 questions about pain, 'Have you had pain' and 'Did pain interfere with your daily activities' were scored on 4-point scale (1=not at all; 4=very much). Summed raw scores were standardized by linear transformation so that scores range from 0 to 100. Higher scores on the symptom scales indicate a higher level of symptoms (i.e. a worse state of the participant). Participants in the HRQOL-Evaluable Population with baseline pain score ≤ 90 were analyzed.

Secondary: TTD of Fatigue Score as Measured by EORTC QLQ-C30

End point title	TTD of Fatigue Score as Measured by EORTC QLQ-C30
End point description: TTD was defined as the time from randomization to the first date a subject achieves 10-point deterioration from baseline in the fatigue score.The EORTC QLQ-C30 is a questionnaire to assess quality of life, it is composed of 30 questions(items) resulting in functional scales,1 global health status scale,symptom scales,and single items.All of the scales and single-item measures range in score from 0 to 100.Participant responses to 3 questions about fatigue 'Did you need to rest', 'Have you felt weak' and 'Were you tired' were scored on a 4-point scale (1=not at all;4=very much).Summed raw scores were standardized by linear transformation so that scores ranged from 0 to 100. Higher scores on the symptom scales indicate a higher level of symptoms (i.e. a worse state of the participant). Participants in the HRQOL-Evaluable Population with baseline fatigue score ≤ 90 were analyzed.

Notes:

[6] - Stratified log-rank test and stratified Cox regression adjusted for stratification factors: prior chemotherapy regimens for metastatic disease, presence of visceral metastasis, and endocrine therapy in the metastatic setting for at least 6 months.

Secondary: Percentage of Participants Who Experienced Treatment Emergent Adverse Events (TEAEs)

End point title	Percentage of Participants Who Experienced Treatment Emergent Adverse Events (TEAEs)
End point description: An AE was defined as any untoward medical occurrence in a subject administered a medicinal product that does not necessarily have a causal relationship with this treatment. TEAEs were defined as any AEs that begin or worsen on or after the start of study drug through 30 days after the last dose of the study drug. The severity was graded based on the National Cancer Institute's Common Terminology Criteria for Adverse Events Version 5.0. The Safety Population included all participants who received at least 1 dose of study drug.	
End point type	Secondary

Secondary: Percentage of Participants Who Experienced Treatment Emergent Serious Adverse Events (TESAEs)

End point title	Percentage of Participants Who Experienced Treatment Emergent Serious Adverse Events (TESAEs)
-----------------	---

End point description:

Treatment-emergent adverse events (TEAEs) were defined as any adverse events (AEs) that begin or worsen on or after the start of study drug through 30 days after the last dose of study drug. The severity was graded based on the National Cancer Institute's Common Terminology Criteria for Adverse Events Version 5.0. An AE that met one or more of the following outcomes was classified as serious:

- Fatal
 - Life-threatening
 - Disabling/incapacitating
 - Results in hospitalization or prolongs a hospital stay
 - A congenital abnormality
 - Other important medical events may also be considered serious AEs if they may require medical or surgical intervention to prevent one of the outcomes listed above
- Participants in the Safety Population were analyzed.

Secondary: Percentage of Participants Who Experienced the Worst Laboratory Abnormalities Grade 3 or 4 Post-Baseline

End point title	Percentage of Participants Who Experienced the Worst Laboratory Abnormalities Grade 3 or 4 Post-Baseline
End point description:	
<p>Blood samples were collected for hematology, serum chemistry, and the laboratory abnormalities were assessed. A treatment-emergent laboratory abnormality was defined as an increase of at least 1 toxicity grade from baseline at any time postbaseline up to and including the date of last study drug dose plus 30 days. The most severe graded abnormality observed post-baseline for each graded test was counted for each participant. Safety as assessed by grading of laboratory values and AEs according to the National Cancer Institutes' Common Terminology Criteria for Adverse Events (NCI CTCAE) covering grades 0-5 (0=Normal, 1=Mild, 2=Moderate, 3=Severe, 4=Life-threatening, 5=Death). The percentage of participants with worst postbaseline grades 3 or 4 are reported. Participants in the Safety Population with post-baseline values were analyzed. 'Number Analyzed' indicates participants with post-baseline values with available data were analyzed.</p>

Reporting groups

Reporting group title	Treatment of Physician's Choice (TPC)
-----------------------	---------------------------------------

Reporting group description:

Participants received TPC (eribulin, capecitabine, gemcitabine, or vinorelbine) as single-agent treatment determined by investigator before participant randomization until progression of disease, occurrence of unacceptable AEs, or another treatment discontinuation criterion was met. Dosing per National Comprehensive Cancer Network guidelines (with dose modifications for if toxic) • Eribulin was administered IV at dose 1.4 mg/m² at North American sites; 1.2 mg/m² at European sites on Days 1 and 8 of a 21-day cycle (up to 22.5 months). • Capecitabine 1000 to 1250 mg/m² was administered in a 21-day cycle,

with capecitabine administered orally twice daily for 2 weeks followed by 1-week rest period (up to 12.9 months). • Gemcitabine 800 to 1200 mg/m² was administered IV on Days 1, 8, and 15 of a 28-day cycle (up to 22.3 months). • Vinorelbine 25 mg/m² was administered as weekly IV injection (up to 8.1 months)

and was not allowed as TPC for any participant with Grade 2 neuropathy.

Reporting group title	Sacituzumab Govitecan
-----------------------	-----------------------

Reporting group description:

Participants received sacituzumab govitecan 10 mg/kg of body weight, administered as a slow intravenous (IV) infusion on Days 1 and 8 of a 21-day treatment cycle until progression of disease, occurrence of unacceptable adverse events (AEs), or another treatment discontinuation criterion was met (up to 40.1 months).

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
27 January 2021	<ul style="list-style-type: none">- Changes made to align with the Health Authority Requirements- With cancellation of interim analysis, ORR was no longer a primary endpoint- BICR assessment added in alignment of Health Authority requirement- Clarified alpha allocation- Text added to update Sponsor's position to not conduct interim analysis- Primary analysis of PFS was conducted on BICR assessment- All tumor-based endpoints were summarized based on both BICR and LIR
23 August 2021	<ul style="list-style-type: none">- Change in Sponsor language throughout to reflect Immunomedics, Inc. is now part of the Gilead group of companies.- The Sponsor signature page was moved to Appendix 1 and other appendices have been re-numbered.- Abbreviations were added to the Schedule of Procedures table.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
