Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	25 September 2024
Is this the analysis of the primary completion data?	Yes
Primary completion date	25 September 2024
Global end of trial reached?	Yes
Global end of trial date	25 September 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the clinical effect of ustekinumab re-induction $\approx 6\text{mg/kg}$ intravenously (IV) followed by either 90 mg subcutaneous (SC) ustekinumab every 8 weeks (q8w) or 90 mg SC ustekinumab every 4 weeks (q4w) in patients with Crohn's Disease who show a secondary loss of response over time

Protection of trial subjects:

This clinical trial was conducted in compliance with the principles of the Declaration of Helsinki (2008), the principles of Good Clinical Practice, and in accordance with all applicable regulatory requirements. The study was conducted on the basis of prior informed consent by the subjects to participate in the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	13 February 2020
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	2 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 108
Worldwide total number of subjects	108
EEA total number of subjects	108

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	102

From 65 to 84 years	6
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Between February 2020 and October 2023 a total of 132 patients were screened and 108 patients were randomized.

First Patient In (FPI) was on 11Mar2020.

Last Patient In (LPI) was on 17Oct2023.

Last Patient Out (LPO) was on 25Sep2024.

Pre-assignment

Screening details:

Eligible Crohn's Disease patients were treated with ustekinumab at a standard maintenance dose of 90 mg every 8 weeks SC. Patients needed to have a documented primary response to standard IV induction with ustekinumab and a documented secondary loss of response based on Patient-Reported Outcomes and objective documentation of disease activity.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	ustekinumab q4w

Arm description:

Subjects received a re-induction at baseline, with intravenous ustekinumab, in line with the EU SmPC, on a weight-tiered basis at a dose of approximately 6 mg/kg. At week 4, the subjects in the q4w arm received the first blinded 90 mg SC injection of ustekinumab. Subsequently, subjects in the q4w arm received commercial available q8w ustekinumab (90 mg SC syringe at week 8, 16, 24, 32, 40, 48) alternated with q8w double blinded active ustekinumab (at week 12, 20, 28, 36, 44).

Arm type	Experimental
Investigational medicinal product name	ustekinumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received subcutaneous ustekinumab 90 mg at week 4, 8, 12, 16, 20, 24, 28, 32, 36, 40, 44 and 48.

Investigational medicinal product name	ustekinumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received a re-induction at baseline (Week 0), with intravenous ustekinumab, in line with the EU SmPC, on a weight-tiered basis at a dose of approximately 6 mg/kg. Subjects with body weight ≤ 55 kg at Week 0 received 260 mg IV ustekinumab. Those subjects with body weight >55 kg and ≤ 85 kg received 390 mg IV ustekinumab. Subjects with body weight >85 kg at Week 0 received 520 mg IV ustekinumab.

Arm title	ustekinumab q8w
------------------	-----------------

Arm description:

Subjects received a re-induction at baseline, with intravenous ustekinumab, in line with the EU SmPC,

on a weight-tiered basis at a dose of approximately 6 mg/kg. At week 4, the subjects in the q8w arm received the first blinded placebo injection. Subsequently, subjects in the q8w arm received commercial available q8w ustekinumab (90 mg SC syringe at week 8, 16, 24, 32, 40, 48) alternated with q8w double blinded placebo (at week 12, 20, 28, 36, 44).

Arm type	Active comparator
Investigational medicinal product name	Ustekinumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received a re-induction at baseline (Week 0), with intravenous ustekinumab, in line with the EU SmPC, on a weight-tiered basis at a dose of approximately 6 mg/kg. Subjects with body weight ≤ 55 kg at Week 0 received 260 mg IV ustekinumab. Those subjects with body weight > 55 kg and ≤ 85 kg received 390 mg IV ustekinumab. Subjects with body weight > 85 kg at Week 0 received 520 mg IV ustekinumab.

Investigational medicinal product name	Ustekinumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received subcutaneous ustekinumab 90 mg at week 8, 16, 24, 32, 40 and 48.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received subcutaneous placebo at week 4, 12, 20, 28, 36 and 44.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From signature of informed consent form up to week 48 in the study. For SAE's up to 60 days after the last study treatment.

Adverse event reporting additional description:

At each visit the investigator had to document any occurrence of adverse events and abnormal laboratory findings. Any event spontaneously reported by the participant or observed by the investigator was recorded, irrespective of the relation to study treatment.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
20 March 2020	Modifications regarding inclusion criteria (less strict), addition of 'window' regarding IV re-induction of ustekinumab and patient visits, update of the timelines for the study.
17 December 2020	Modifications regarding inclusion criteria (to ensure that included patients have at least inflammation in the gut if loss of response was based on the increase in biomarker(s)) and exclusion criteria (clarification), update of study timelines, removal of collection of additional stool samples for substudy.
01 April 2022	Modification in one of the inclusion criteria (to ensure patients with primary response at week 20 instead of week 16 are not screenfailed), modification regarding the visit window for the screening endoscopy.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
