

Clinical trial results:

A Multicenter, Double-Blind, Randomized, Placebo-Controlled, Parallel-Group Study to Evaluate the Safety and Efficacy of MT10109L (NivobotulinumtoxinA) for the Treatment of Glabellar Lines.

Summary

EudraCT number	2018-004384-31
Trial protocol	BE
Global end of trial date	25 January 2021

Results information

Result version number	v1 (current)
This version publication date	13 December 2023
First version publication date	13 December 2023

Trial information

Trial identification

Sponsor protocol code	MT10109L-001

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	29 September 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	13 March 2020
Global end of trial reached?	Yes
Global end of trial date	25 January 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To compare the efficacy between MT10109L and placebo for the treatment of GL in participants with moderate to severe GL.

The total global enrollment (as presented in the "Population of Trial Subjects" below was 234, which included the Intent-To-Treat population. However, all primary and secondary efficacy analyses for EU regulatory endpoints reported here are using the mITT population that included a total of 191 participants (USA - 153; Russia - 21 and; Belgium - 17).

Protection of trial subjects:

The study protocol, all study protocol amendments, written study participant information, informed consent form (ICF), Investigator's Brochure (IB) and any other relevant documents were reviewed and approved by an independent ethics committee (IEC) or institutional review board (IRB) at each study center.

The study was conducted in accordance with the protocol, the ethical principles derived from international guidelines including the Declaration of Helsinki and Council for International Organizations of Medical Sciences International Ethical Guidelines, applicable International Council for Harmonisation (ICH)/Good Clinical Practice (GCP) and other Guidelines, and applicable laws and regulations.

An ICF approved by each study center's IEC/IRB was signed by the participant or their legally authorized representative and the authorized person obtaining the ICF before the participant was entered in the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	24 December 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 26
Country: Number of subjects enrolled	United States: 178
Country: Number of subjects enrolled	Russian Federation: 30
Worldwide total number of subjects	234
EEA total number of subjects	26

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	218
From 65 to 84 years	16
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants were screened and recruited at sites in US, Belgium and Russia. The data described here is for the Intent-to-Treat population. The Intent-to-treat (ITT) population consisted of all randomized participants.

Pre-assignment

Screening details:

234 met the inclusion/exclusion criteria and were randomized.

Period 1

Period 1 title	Double-blind
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

Randomization and double-blinding were used to minimize bias arising from the assignment of participants to treatment groups and the expectations of participants, investigators, and individuals collecting data.

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Placebo was injected into the Glabellar Lines (GL): initial double-blind treatment on Day 1.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection, Sterile concentrate
Routes of administration	Intramuscular use

Dosage and administration details:

5 injection sites. 0.1 ml per injection. Placebo - 0 U per 0.1 ml.

Arm title	MT10109L
------------------	----------

Arm description:

MT10109L was injected into the Glabellar Lines (GL): initial double-blind treatment on Day 1

Arm type	Experimental
Investigational medicinal product name	MT10109L
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection, Sterile concentrate
Routes of administration	Intramuscular use

Dosage and administration details:

5 injection sites. 0.1 ml per injection. MT10109L - 4 U per 0.1 ml. Total = 20 U

Number of subjects in period 1	Placebo	MT10109L
Started	80	154
Completed	71	138
Not completed	9	16
Consent withdrawn by subject	4	10
Adverse event, non-fatal	2	1
Early termination, COVID, Family issue	1	2
Pregnancy	-	1
Lost to follow-up	2	2

Period 2

Period 2 title	Open-label - Re-treatment 1
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	MT10109L re-treatment 1 for Placebo arm

Arm description:

In the open-label part, participants in the placebo arm, who met retreatment criteria, were allowed up to 2 MT10109L treatments.

Arm type	Experimental
Investigational medicinal product name	MT10109L
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection, Sterile concentrate
Routes of administration	Intramuscular use

Dosage and administration details:

2 treatment cycles in the open-label period. 5 injection sites per treatment. 0.1 ml per injection. MT10109L - 4 U per 0.1 ml. Total = 20 U per treatment cycle

Arm title	MT10109L re-treatment 1 for experimental arm in cycle 1
------------------	---

Arm description:

Participants from the experimental arm of Period 1, who met protocol-defined re-treatment criteria, were eligible to receive up to two additional MT10109L during the open-label part..

Arm type	Experimental
Investigational medicinal product name	MT10109L
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection, Sterile concentrate
Routes of administration	Intramuscular use

Dosage and administration details:

Retreatment cycle in the open-label period. 5 injection sites per treatment. 0.1 ml per injection. MT10109L - 4 U per 0.1 ml. Total = 20 U per treatment cycle

Number of subjects in period 2^[1]	MT10109L re-treatment 1 for Placebo arm	MT10109L re-treatment 1 for experimental arm in cycle 1
Started	69	136
Completed	65	129
Not completed	4	7
Consent withdrawn by subject	1	2
Physician decision	1	2
Early termination, COVID, Family issue	2	2
Lost to follow-up	-	1

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Justification - Only participants from the previous treatment period who met a protocol-defined re-treatment criteria entered into the next treatment period.

Period 3

Period 3 title	Open-label - Re-treatment 2
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	MT10109L re-treatment 2 for Placebo arm

Arm description:

In the open-label part, participants in the placebo arm, who met retreatment criteria, were allowed up to 2 MT10109L treatments.

Arm type	Experimental
Investigational medicinal product name	MT10109L
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection, Sterile concentrate
Routes of administration	Intramuscular use

Dosage and administration details:

Retreatment cycle in the open-label period. 5 injection sites per treatment. 0.1 ml per injection. Placebo - 4 U per 0.1 ml. Total = 20 U per treatment cycle

Arm title	MT10109L re-treatment 2 for experimental arm
------------------	--

Arm description:

Participants from the experimental arm of Period 1, who met protocol-defined re-treatment criteria, were eligible to receive up to two MT10109L during the open-label part.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	MT10109L
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection, Sterile concentrate
Routes of administration	Intramuscular use

Dosage and administration details:

Retreatment cycle in the open-label period. 5 injection sites per treatment. 0.1 ml per injection. MT10109L - 4 U per 0.1 ml. Total = 20 U per treatment cycle.

Number of subjects in period 3^[2]	MT10109L re-treatment 2 for Placebo arm	MT10109L re-treatment 2 for experimental arm
Started	52	99
Completed	52	97
Not completed	0	2
Consent withdrawn by subject	-	1
Protocol deviation	-	1

Notes:

[2] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Justification - Only participants from the previous treatment period who met a protocol-defined re-treatment criteria entered into the next treatment period.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

The time frame for AEs is from the first dose on Day 1 and up to 30 days after their last visit or study exit (Day 360 or early exit).

Adverse event reporting additional description:

Safety analyses were carried out using the Safety population (participants who received at least 1 dose of study intervention). Placebo participants who entered open-label phase (post Day 180) and received study intervention are counted in MT10109L Group. Thus, overall number of participants in MT10109L Group is greater than the participant flow.

Reporting groups

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Placebo was injected into the Glabellar Lines (GL): initial double-blind treatment on Day 1. In the open-label period (post day 180), up to 2 MT10109L treatments were possible. TEAEs with onset date after the MT10109L treatment were not counted here.

Reporting group title	MT10109L
-----------------------	----------

Reporting group description:

MT10109L was injected into the Glabellar Lines (GL): initial double-blind treatment on Day 1, and up to 2 open-label study interventions during the retreatment period. Placebo participants who experienced TEAE after receiving MT10109L during open-label phase were counted here.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
26 February 2019	The primary purpose of this protocol amendment was to integrate feedback and recommendations from health authorities and improve clarity of study processes. This amendment is considered substantial based on the criteria set forth in Article 10(a) of Directive 2001/20/EC of the European Parliament and the Council of the European Union.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
