

## Clinical trial results:

### A PHASE 2, RANDOMIZED, DOUBLE-BLIND, PLACEBO-CONTROLLED, MULTICENTER, DOSE-FINDING STUDY TO EVALUATE THE EFFICACY AND SAFETY OF CC-90001 IN SUBJECTS WITH NON-ALCOHOLIC STEATOHEPATITIS (NASH) AND LIVER FIBROSIS

#### Summary

EudraCT number	2018-004431-79
Trial protocol	GB FR ES PL
Global end of trial date	28 September 2021

#### Results information

Result version number	v1 (current)
This version publication date	15 October 2022
First version publication date	15 October 2022

#### Trial information

##### Trial identification

Sponsor protocol code	CC-90001-NASH-001
-----------------------	-------------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT04048876
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Bristol-Myers Squibb
Sponsor organisation address	Chaussée de la Hulpe 185, Brussels, Belgium, 1170
Public contact	EU Study Start-Up Unit, Bristol-Myers Squibb International Corporation, Clinical.Trials@bms.com
Scientific contact	Bristol-Myers Squibb Study Director, Bristol-Myers Squibb, Clinical.Trials@bms.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	28 September 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	28 September 2021
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of the study is to evaluate the effect of oral CC-90001, administered once daily (QD), compared with placebo, on liver histology in subjects with nonalcoholic steatohepatitis (NASH) and Stage 2 or Stage 3 fibrosis.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization Good Clinical Practice Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	14 August 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Japan: 12
Country: Number of subjects enrolled	Korea, Republic of: 2
Country: Number of subjects enrolled	France: 3
Country: Number of subjects enrolled	Germany: 1
Country: Number of subjects enrolled	Poland: 5
Country: Number of subjects enrolled	Spain: 2
Country: Number of subjects enrolled	Canada: 3
Country: Number of subjects enrolled	United States: 28
Worldwide total number of subjects	56
EEA total number of subjects	11

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23	0

months)	
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	41
From 65 to 84 years	15
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

56 Participants Randomized and Treated

### Period 1

Period 1 title	Placebo Controlled Phase
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

### Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

<b>Arm title</b>	Treatment 1
------------------	-------------

Arm description:

### Primary: Percentage of participants who achieve a $\geq 1$ stage improvement in liver fibrosis using the NASH CRN Histological Scoring System at Week 52

End point title	Percentage of participants who achieve a $\geq 1$ stage improvement in liver fibrosis using the NASH CRN Histological Scoring System at Week 52 <sup>[1]</sup>
End point description: Percentage of participants who achieve a $\geq 1$ stage improvement in liver fibrosis using the NASH CRN Histological Scoring System at Week 52. A participant with a change of $\leq -1$ from baseline in fibrosis stage is considered as an improvement responder for this endpoint.  The NASH CRN Histologic Scoring System comprised: steatosis (0 to 3) lobular inflammation (0 to 3) hepatocellular ballooning (0 to 2) fibrosis disease stage (0 to 4)  • Stage 0 - None; • Stage 1a - Mild (delicate) zone 3 perisinusoidal fibrosis; • Stage 1b - Moderate (dense) zone 3 perisinusoidal fibrosis; • Stage 1c - Portal/periportal fibrosis only; • Stage 2 - Zone 3 perisinusoidal fibrosis with portal/periportal fibrosis; • Stage 3 - Bridging fibrosis; • Stage 4 - Cirrhosis.	
End point type	Primary
End point timeframe: at week 52	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No Statistical Analysis done for this endpoint

## Secondary: Percentage of participants with no worsening of steatohepatitis and $\geq 1$ stage improvement in liver fibrosis score at week 52

End point title	Percentage of participants with no worsening of steatohepatitis and $\geq 1$ stage improvement in liver fibrosis score at week 52
-----------------	---

End point description:

Percentage of participants with no worsening of steatohepatitis and  $\geq 1$  stage improvement in liver fibrosis score at week 52 using the NASH CRN Histological Scoring System at Week 52. A participant with a change of  $\geq -1$  from baseline in fibrosis stage and no worsening in steatohepatitis is considered as an improvement responder for this endpoint.

The NASH CRN Histologic Scoring System comprised:

steatosis (0 to 3)

lobular inflammation (0 to 3)

hepatocellular ballooning (0 to 2)

fibrosis disease stage (0 to 4)

- Stage 0 - None;
- Stage 1a - Mild (delicate) zone 3 perisinusoidal fibrosis;
- Stage 1b - Moderate (dense) zone 3 perisinusoidal fibrosis;
- Stage 1c - Portal/perportal fibrosis only;
- Stage 2 - Zone 3 perisinusoidal fibrosis with portal/perportal fibrosis;
- Stage 3 - Bridging fibrosis;
- Stage 4 - Cirrhosis.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Treatment-emergent adverse events: up to 108 weeks

All-Cause Mortality: up to 108 weeks

Adverse event reporting additional description:

TEAE includes AEs that begin or worsen on or after the first dose of study drug following randomization at Week 0 through 31 days after the last dose of study drug or on the date of the actual last follow-up in the study, whichever is later.

All-cause mortality will be calculated from date of randomization to study completion.

Assessment type	Systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
29 May 2019	Changes in the following sections. Medical Monitor / Emergency Contact Information Celgene therapeutic area head signature page Introduction Exclusion Criteria for All Subjects Exclusion Criteria for All Subjects (Section 4.3.1) and Prohibited Concomitant Medications and Procedures Prohibited Concomitant Medications and Procedures Table of Events Sample Size and Power Considerations Discontinuations
26 September 2019	<ul style="list-style-type: none"><li>• Medical Monitor / Emergency Contact Information<ul style="list-style-type: none"><li>- Contact information was changed to replace medical monitor's phone numbers with hotline number</li></ul></li><li>• Protocol Summary and Overall Study Design (Section 3)<ul style="list-style-type: none"><li>- Screening period was extended to 10 weeks to allow enough time for completion of study procedures.</li></ul></li><li>• Study Population (Section 4)<ul style="list-style-type: none"><li>- Inclusion criterion #5 was updated to clarify that the historical liver biopsy in subjects who had been on therapy for treatment of NASH is not to be accepted.</li><li>- Inclusion criteria #6 and #7 were updated to ensure stable doses of medications prior to and after historical liver biopsy is obtained, if the historical biopsy was going to be used for the inclusion criteria.</li><li>- Exclusion criterion #3 was corrected.</li><li>- Exclusion criterion #17 were updated to clarify that positive screening hepatitis B/C is also exclusionary for the study.</li><li>- Exclusion criterion #31 was added to exclude subjects with history of Gilbert's syndrome since clinical manifestations of Gilbert's syndrome might confound the safety and efficacy assessments of CC-90001.</li></ul></li><li>• Table of Events (Section 5) and Procedures (Section 6)<ul style="list-style-type: none"><li>- Added screening <math>\alpha</math>-fetoprotein test to Table of Events and Procedures sections. Protocol Section 4.3.2 Exclusion Criteria for the Subjects with Stage 3 Fibrosis excludes subjects with a screening <math>\alpha</math>-fetoprotein <math>\geq 200</math> ng/mL and <math>\alpha</math>-fetoprotein <math>&gt; 20</math> ng/mL should be discussed with Sponsor to review the evaluation of Hepatocellular Cancer (HCC).</li><li>- Added ultrasound and <math>\alpha</math>-fetoprotein test at Early Termination Visit to ensure HCC surveillance to be done for early terminated subjects with Stage 4 fibrosis.</li></ul></li><li>• Prohibited Concomitant Medications and Procedures (Section 8.2)<ul style="list-style-type: none"><li>- Acetaminophen dose was corrected.</li></ul></li><li>• Individual Subject Stopping Criteria (Section 11.1.1)<ul style="list-style-type: none"><li>- Clarification was made on FOBT stopping criterion.</li></ul></li></ul>

11 November 2020	<p>Protocol Summary, Rationale (Section 1.3), Study objectives and Endpoints (Section 2), Overall Study Design (Section 3), Study Population (Section 4), Method of Treatment Assignment (Section 7.3), Statistical Considerations (Section 9), Appendix B and Appendix C</p> <ul style="list-style-type: none"> <li>- Expanded study population to allow subjects with NASH and Stage 2 fibrosis in the study and evaluate efficacy and safety of CC-90001 in these subjects.</li> <li>- References to Appendix B and Appendix C were removed from Study population, Table of Events footnote and Procedures sections because they did not apply to Stage 2 fibrosis. Appendix B and Appendix C were removed as well.</li> </ul> <p>Study objectives and Endpoints (Section 2)</p> <ul style="list-style-type: none"> <li>- Added exploratory endpoint for Ishak score and Section 6.6 Efficacy Assessment was updated accordingly</li> <li>- Exploratory endpoints of 2-dimensional magnetic resonance elastography (MRE), 3-dimensional MRE and magnetic resonance imaging-proton density fat fraction (MRI-PDFF) were updated to add absolute change from baseline</li> <li>- Added N-terminal type III collagen propeptide (PRO-C3) to exploratory pharmacodynamic endpoint</li> </ul> <p>Added rationale on assessment of severe acute respiratory syndrome corona virus 2 (SARS-CoV-2) serologic status</p> <p>Added SARS-CoV-2 serology to the Table of Events and Section 6.8.1 Biomarkers/Pharmacodynamics</p> <ul style="list-style-type: none"> <li>- Added exploratory objective and endpoint on SARS-CoV-2 serology</li> <li>- Revised exclusion criterion #13 to clarify that subjects with SARS-CoV-2 infection within 4 weeks of Screening will be excluded and symptoms must have completely resolved</li> <li>- Added exclusion criterion #34 to exclude subjects who have received live attenuated or investigational SARS-CoV-2 vaccine within 3 months prior to the first dose of study treatment.</li> <li>- Changes were made to clarify that fasting is required for certain visits.</li> </ul>
16 April 2021	<p>100 mg dose treatment arm was removed</p> <ul style="list-style-type: none"> <li>- Data from non-clinical and clinical studies suggest that therapeutic doses in humans are likely to be 200 mg and 400 mg once daily (QD). 100 mg QD dose of CC-90001 is likely not as effective a dose in subjects with NASH and liver fibrosis. The subjects who are randomized to the 100 mg dose group prior to implementation of Protocol Amendment 4 will stay on 100 mg QD dose throughout the study.</li> </ul> <p>Stage 4 population was removed</p> <ul style="list-style-type: none"> <li>- The protocol was revised to focus on assessing the efficacy and safety of CC-90001 in subjects with NASH and Stage 2 or Stage 3 liver fibrosis in this study.</li> </ul> <p>Active Treatment/Extension Phase was removed</p> <ul style="list-style-type: none"> <li>- Active treatment/extension phase was removed to reduce burden for the subjects due to the Coronavirus Disease 2019 (COVID-19) pandemic and to shorten the duration of the study. Subjects who sign informed consent form (ICF) prior to the implementation of Protocol Amendment 4 will have an option to participate active treatment/extension phase.</li> </ul> <p>Exclusion criterion #21 "Subjects has 2 positive fecal occult blood test (FOBT) during Screening, collected at least 4 weeks apart" was removed</p> <ul style="list-style-type: none"> <li>- Gastrointestinal (GI) toxicity was noted in nonclinical studies. The clinical studies to date have not indicated an increased risk for GI bleeding. Positive FOBT may be caused by different causes (such as rectal hemorrhage, ulcers, colitis, diverticulosis). The protocol has excluded the subjects with a history of inflammatory bowel disease and the subjects with a history of bleeding peptic ulcer or bleeding diverticular disease within 5 years. Furthermore, the protocol also implemented FOBT at Screening and approximately every 12 weeks during the study and discontinuation criteria for the subject with positive FOBT in the study. With all these in place the occurrence of GI bleeding in the study continues to be well monitored to ensure safety of subjects over the course of the trial.</li> </ul>

Notes:

## Interruptions (globally)

Were there any global interruptions to the trial? No

## Limitations and caveats

None reported
