Clinical trial results:
Multicenter, open-label, safety and tolerability study of ascending doses of HepaStem in patients with cirrhotic and pre-cirrhotic non-alcoholic steato-hepatitis (NASH).

Summary

EudraCT number	2018-004449-18
Trial protocol	FR BE BG PL ES RO
Global end of trial date	31 August 2020

Results information

Result version number	v1 (current)
This version publication date	28 April 2024
First version publication date	28 April 2024

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	21 November 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	31 August 2020
Global end of trial reached?	Yes
Global end of trial date	31 August 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this trial is to determine the safety and tolerability of ascending single and repeated doses of HepaStem up to Day 28 administered to patients with cirrhotic and pre cirrhotic NASH.

Protection of trial subjects:

The study was conducted in accordance with the ICH Guideline for GCP (specific to ATMP), the guiding principles of the "Declaration of Helsinki", the local data protection and all other applicable regulatory requirements.
All patients received HepaStem at the study site under the surveillance of appropriate study personnel. The patients were to stay hospitalized for a minimum duration of 24 hours after the infusion of HepaStem to ensure their continuous monitoring.
In order to prevent transfusion-like reaction, a bolus of 100 mg hydrocortisone or equivalent glucocorticoid was given 15 to 30 minutes before each HepaStem infusion.
Successive dose cohorts received progressively larger doses through a stepwise approach evaluated by the Safety Monitoring Committee.
After completion of the study, all participants who received at least 1 infusion of HepaStem were invited to participate in the long-term follow-up PROLONGSTEM study for 5 additional years (EudraCT 2017-003989-27, EU-CTR 2022-500251-22-00).

Background therapy:

The participants were recruited at hospitals with specialized hepatology and intensive care units. The patients' profile consisted of NASH with stage F3 or (compensated/early decompensated) F4 fibrosis with proven diagnosis of NASH demonstrated by liver biopsy before screening, available within 6 months for F3 patients or 2 years for F4 patients. If biopsy was not available within these time windows, a biopsy was to be performed at screening. F4 patients for whom the biopsy did not confirm the diagnosis of NASH could be included, provided that any other causes of underlying liver diseases were excluded.
Decompensated F4 patients had to present one of the following clinical signs of decompensation:
- Total bilirubin > 2 mg/dL (direct bilirubin > 1.5 mg/dL in case of suspected Gilbert's syndrome), and/or
- Clinical signs of ascites, and/or
- Clinical or electroencephalography evidence of HE up to grade II

Evidence for comparator:

Not applicable

Actual start date of recruitment	15 March 2019
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	6 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 1
Country: Number of subjects enrolled	Romania: 2
Country: Number of subjects enrolled	Spain: 7
Country: Number of subjects enrolled	Belgium: 4
Country: Number of subjects enrolled	Bulgaria: 8
Country: Number of subjects enrolled	France: 1
Worldwide total number of subjects	23
EEA total number of subjects	23

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	17
From 65 to 84 years	6
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Ten investigational sites in 6 countries recruited 23 participants: 2 in Bulgaria, 2 in Belgium, 1 in France, 1 in Poland, 3 in Spain, and 1 in Romania.
The recruitment period lasted approximately 10 months (FPFV 19-APR-2019 - LPFV 20-FEB-20120).

Pre-assignment

Screening details:

The screening period lasted up to 14 days following informed consent signature and allowed assessing participant's eligibility.
Participants were hospitalized during the screening period.
31 participants were screened, 23 were eligible and included in the safety analysis set (SAF).

Period 1

Period 1 title	Infusion Day 1
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

All participants enrolled in the study were administered a single or 3 repeated weekly infusions of 0.5 or 1.0 x 10^6 cells of HepaStem/kg body weight (BW).
There was no blinding in this study.

Arms

Are arms mutually exclusive?	Yes
Arm title	Single arm - Dose Cohort 1

Arm description:

Dose Cohort 1

Arm type	Experimental
Investigational medicinal product name	HepaStem
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Dispersion for infusion
Routes of administration	Intravenous use

Dosage and administration details:

- Dose Cohort 1: 0.5 x 10^6 cells of HepaStem/kg body weight (BW), administered as single intravenous infusion.

Arm title	Single arm - Dose Cohort 2

Arm description:

Dose Cohort 2

Arm type	Experimental
Investigational medicinal product name	HepaStem
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Dispersion for infusion
Routes of administration	Intravenous use

Dosage and administration details:

- Dose Cohort 2: 1.0 x 10^6 cells of HepaStem/kg BW, administered as single intravenous infusion.

Arm title	Single arm - Dose Cohort 3

Arm description:	
Dose Cohort 3	
Arm type	Experimental
Investigational medicinal product name	HepaStem

Subject analysis set title	Safety analysis set
Subject analysis set type	Safety analysis

Subject analysis set description:

The Safety analysis set (SAF) included all patients entered in the study who received at least one dose of the IMP.

Primary: Adverse events reported up to Day 28 assessed for seriousness, severity, relationship to the IMP and/or IMP administration procedure

End point title	Adverse events reported up to Day 28 assessed for seriousness, severity, relationship to the IMP and/or IMP administration procedure[1]

End point description:

Safety assessments from the time of signing the ICF through the Day 28 Visit included:
- Adverse events/Treatment-emergent adverse events
- Physical examination
- Imaging
- Vital signs
- Local laboratory measurements

End point type	Primary

End point timeframe:

Up to Day 28

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.
Justification: Descriptive statistics.
The study was not powered with respect to any specific hypothesis.
Incidence of specific AEs and SAEs are tabulated as count and percentage, broken down by dose level.

End point values	Safety analysis set			
Subject group type	Subject analysis set			
Number of subjects analysed	23			
Units: Number of cases	28

Statistical analyses

No statistical analyses for this end point

Secondary: Presence of anti-HLA antibodies (Abs) and identification of donor HLA specificity

End point title	Presence of anti-HLA antibodies (Abs) and identification of donor HLA specificity

End point description:

To understand better the effects HepaStem on immunogenicity development, anti-HLA Abs (class I and II) were assessed (specificity identification and quantification) in serum samples collected before infusion as well as on Day 28, Month 3, and Month 6 by Luminex method in a Central laboratory. The threshold for detection was set at a mean Fluorescence intensity (MFI) > 1500. MFI > 5000 was considered as clinically significant level.

End point type	Secondary

End point timeframe:

Up to Month 6

End point values	Safety analysis set

Units: Number of patients with anti-HLA Abs	7			

Attachments (see zip file)	HEP201_Secondary Safety Endpoint_20231121_1_HLA.pdf

Statistical analyses

No statistical analyses for this end point

Secondary: Coagulation tests up to 24 hours post infusion

End point title	Coagulation tests up to 24 hours post infusion

End point description:

Local laboratory measurements included platelet counts, and levels of fibrinogen, INR, aPTT, D-dimer, TT, protein C, and protein S.
Central laboratory measurements included plasminogen activator inhibitor-1 (PAI-1) activity.
Laboratory measurements were carried out by standard, validated, and widely used methods.
All blood samples for the safety laboratory tests had to be taken in a fasting state.
Concentrations are expressed in mg/L (D-dimers), mg/dL (fibrinogen). G/L (platelet counts), % (Protein C and Protein S), seconds (TT and aPTT), UA/mL (PAI-1).
INR has no unit.

End point type	Secondary

End point timeframe:

Up to 24 hours post infusion

Statistical analyses

No statistical analyses for this end point

Secondary: Quantitative assessment of liver function

End point title	Quantitative assessment of liver function

End point description:

Local laboratory measurements for liver function included levels of bilirubin, ALT, AST, GGT, ALP, and albumin.
Laboratory measurements were carried out by standard, validated, and widely used methods.
Total bilirubin is expressed in mg/dL, liver enzymes in U/L, albumin in g/L.

End point type	Secondary

End point timeframe:

Up to Month 6

Statistical analyses

No statistical analyses for this end point

Secondary: Quantitative assessment of metabolic biomarkers and clinical signs

End point title	Quantitative assessment of metabolic biomarkers and clinical signs

End point description:

Local laboratory measurements for metabolic biomarkers included levels of glucose, insulin, total cholesterol, LDL, HDL, triglycerides, uric acid, and HbA1C.
Waist circumference and BMI (except in decompensated patients with ascites) were also measured or calculated.
Laboratory measurements were carried out by standard, validated, and widely used methods.
Fasting glucose is expressed in mmol/L, fasting insulin in pmol/L, HDL, LDL, total cholesterol and triglycerides in mmol/L, uric acid in µmol/L, creatinine in mg.dL.

End point type	Secondary

Statistical analyses

No statistical analyses for this end point

Secondary: Quantitative assessment of liver fibrosis biomarkers and stiffness

End point title	Quantitative assessment of liver fibrosis biomarkers and stiffness

End point description:

Liver stiffness and liver steatosis were simultaneously evaluated using non-invasive ultrasound imaging Fibroscan® 530 Compact or 502 Touch (Echosens, Paris, France) or with the Logiq S8 XDclear 2.0 ultrasound system with Integrated Liver Package (GE Healthcare and Echosens).
Liver stiffness measurement (LSM) was evaluated by vibration-controlled transient elastography (TE).
Fibrosis scores as non-invasive tests based on serum markers have limited value for definitive diagnosis of liver fibrosis; however, they help to rule-in or rule-out advanced fibrosis especially iin combination with TE.
Simple non-patented fibrosis scores were calculated.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Up to Month 6 post infusion

Assessment type	Systematic

Dictionary used

Dictionary name	MedDRA
Dictionary version	21.1

Reporting groups

Reporting group title	Safety analysis set (SAF)

Reporting group description: -

Serious adverse events	Safety analysis set (SAF)		
Total subjects affected by serious adverse events			
subjects affected / exposed	4 / 23 (17.39%)		
number of deaths (all causes)	0		
number of deaths resulting from adverse events	0		
Neoplasms benign, malignant and unspecified (incl cysts and polyps)			
Hepatic mass	Additional description: Since a lesion of undetermined nature was already present at the same location and with the same size in repeated ultrasound images before study participation, the Sponsor assessed the event as not related to the IMP.		
subjects affected / exposed	1 / 23 (4.35%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Prostate cancer	Additional description: The event of prostatic adenocarcinoma occurred 223 days after the single administration of the study drug. The temporal relationship regarding the IMP was considered implausible. The event was assessed as unlikely related to the IMP.		
subjects affected / exposed	1 / 23 (4.35%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Vascular disorders			
Ischaemic stroke	Additional description: Five days after the 2nd infusion, the patient experienced an ischemic stroke of mild severity that completely resolved 6 days after the event onset and that was assessed as possibly related to the pre-existing condition of arterial hypertension & T2D		
subjects affected / exposed	1 / 23 (4.35%)		
occurrences causally related to treatment / all	1 / 1		
deaths causally related to treatment / all	0 / 0		
Renal and urinary disorders			

Renal colic	Additional description: Forty-three days after the first infusion, the patient experienced reno-ureteral colic of mild severity that resolved with analgesic treatment on the day after the event onset. The temporal relationship with the IMP was considered implausible.		
subjects affected / exposed	1 / 23 (4.35%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		

Frequency threshold for reporting non-serious adverse events: 5 %

Non-serious adverse events	Safety analysis set (SAF)		
Total subjects affected by non-serious adverse events			
subjects affected / exposed	18 / 23 (78.26%)		
Investigations			
Fibrin D dimer increased			
subjects affected / exposed	2 / 23 (8.70%)		
occurrences (all)	2		
Nervous system disorders			
Headache			
subjects affected / exposed	3 / 23 (13.04%)		
occurrences (all)	3		
Tremor			
subjects affected / exposed	2 / 23 (8.70%)		
occurrences (all)	2		
General disorders and administration site conditions			
Pyrexia			
subjects affected / exposed	6 / 23 (26.09%)		
occurrences (all)	7		
Gastrointestinal disorders			
Abdominal distension			
subjects affected / exposed	3 / 23 (13.04%)		
occurrences (all)	3		
Diarrhoea			
subjects affected / exposed	2 / 23 (8.70%)		
occurrences (all)	2		
Toothache			
subjects affected / exposed	2 / 23 (8.70%)		
occurrences (all)	2		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
29 August 2019	Study protocol v2.0 dated 29-AUG-2019: • The denomination of the IMP was updated from Heterologous Human Adult Liver-Derived Progenitor Cells (HHALPC) to Human Allogenic Liver-Derived Progenitor Cells (HALPC) • The exclusion criterion relative to the use (rather than the refusal to use) of highly effective (rather than reliable) contraceptive methods (Exclusion criterion #30) was updated. • The total volume of blood collected during the study procedures was added • A summary of potential risks and benefits was added • The DLT definition was updated not to limit it to 2 identical serious events • A 4-day safety period between each patient was added for Dose Cohorts 1 and 2 • A safety period between each patient for sequential management was defined for Dose Cohorts 3 and 4 • A negative pregnancy test for female patients of childbearing potential was added as eligibility infusion criterion • It was clarified that the laboratory urine pregnancy test was only applicable for female patients of childbearing potential
10 December 2019	Study protocol v3.0 dated 10-DEC-2019: • Additional patients with more advanced cirrhotic F4 NASH were envisaged and 2 additional dose cohorts (5 and 6) were added; other sections in the protocol were adapted accordingly • Some exploratory endpoints were removed because they were already described elsewhere • Exclusion criterion #2 relative to alcohol consumption was updated • Exclusion criterion #17 and #18 were merged and the numbering of subsequent exclusion criteria was adapted accordingly • Exclusion criterion #29 relative to known hypersensitivity to some antibiotics was added • Switzerland was added as participating country • The recommendation to consult the Summary of product characteristics (SmPCs) of corticosteroids used as preventive pre-medication was added • A sub-section relative to the notification of new facts was added in Section 12.2.10 • The sub-section relative to interim analysis was clarified

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
