Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	02 October 2023
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	02 October 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The reason for this study is to see if the study drug mirikizumab is safe and effective in participants with moderately to severely active Crohn's disease.

Protection of trial subjects:

This study was conducted in accordance with International Conference on Harmonization (ICH) Good Clinical Practice, and the principles of the Declaration of Helsinki, in addition to following the laws and regulations of the country or countries in which a study is conducted.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	23 July 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Türkiye: 41

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Participants received Placebo intravenously (IV) or subcutaneously (SC) every 4 weeks (Q4W). Any participant in the placebo arm who was considered a non-responder at Week 12 received 900 milligrams (mg) Mirikizumab IV Q4W for 3 doses, then 300 mg SC Q4W for the remainder of the study. Nonresponse is defined as failing to achieve at least a 30% decrease in stool frequency (SF) and/or abdominal pain (AP) and be no worse than baseline.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion, Solution for injection in pre-filled syringe
Routes of administration	Intravenous use, Subcutaneous use

Dosage and administration details:

Participants received Placebo IV or SC Q4W. Any participant in the placebo arm who was considered a non-responder at Week 12 received 900 mg Mirikizumab IV Q4W for 3 doses, then 300 mg SC Q4W for the remainder of the study.

Arm title	Mirikizumab
------------------	-------------

Arm description:

Participants received 900 mg Mirikizumab IV Q4W for 3 doses, then 300 mg SC Q4W

Arm type	Experimental
Investigational medicinal product name	Mirikizumab
Investigational medicinal product code	
Other name	LY3074828
Pharmaceutical forms	Solution for infusion, Suspension for injection in pre-filled syringe
Routes of administration	Intravenous use, Subcutaneous use

Dosage and administration details:

Participants received 900 mg Mirikizumab IV Q4W for 3 doses, then 300 mg SC Q4W

Arm title	Ustekinumab
------------------	-------------

Arm description:

Participants received 6 milligrams per kilogram (mg/kg) Ustekinumab IV for one dose, then 90 mg SC every 8 weeks (Q8W)

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	Ustekinumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion, Solution for injection in pre-filled syringe
Routes of administration	Intravenous use, Subcutaneous use
Dosage and administration details:	
Participants received 6 mg/kg Ustekinumab IV for one dose, then 90 mg SC Q8W	
Arm title	Mirikizumab (Adolescents)

Arm description:

Participants received 900 mg Mirikizumab IV Q4W for 3 doses, then 300 mg SC Q4W

Arm type	Experimental
Investigational medicinal product name	Mirikizumab
Investigational medicinal product code	
Other name	LY3074828
Pharmaceutical forms	Solution for infusion, Suspension for injection in pre-filled syringe
Routes of administration	Intravenous use, Subcutaneous use

Dosage and administration details:

Participants received open label 900 mg Mirikizumab IV Q4W for 3 doses, then 300 mg SC Q4W

Number of subjects in period 1	Placebo	Mirikizumab	Ustekinumab

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Milestone only shows Placebo Non-Responders; number should not be included again in count.

[2] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Milestone only shows Placebo Non-Responders; number should not be included again in count.

[3] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Milestone only shows Placebo Non-Responders; number should not be included again in count.

[4] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Milestone only shows Placebo Non-Responders; number should not be included again in count.

Primary: Percentage of Adult Participants Achieving Clinical Response at Week 12 and Endoscopic Response at Week 52 (Placebo and Mirikizumab)

End point title	Percentage of Adult Participants Achieving Clinical Response at Week 12 and Endoscopic Response at Week 52 (Placebo and Mirikizumab) ^[1]
End point description: Clinical response by Patient Reported Outcome (PRO) defined as $\geq 30\%$ decrease in stool frequency (SF) and/or abdominal pain (AP) & neither score worse than baseline. SF (number of liquid or very soft stools) as per Bristol Stool Scale Category 6 or 7 and AP (4-point scale: 0=none, 1=mild, 2=moderate, 3=severe). Endoscopic response defined as $\geq 50\%$ reduction from baseline in total Simple Endoscopic Score for Crohn's Disease (SES-CD) score. SES-CD evaluates 4 variables assessed in 5 bowel segments, each scored from 0-3: presence & size of ulcers (none=0; diameter 0.1-0.5 cm=1; 0.5-2 cm=2; >2 cm=3); extent of ulcerated surface (none=0; <10%=1; 10% to 30%=2; >30%=3); extent of affected surface (none=0; <50%=1; 50% to 75%=2; >75%=3); presence & type of narrowing (none=0; single, can be passed=1; multiple, can be passed=2; cannot be passed=3). Total is sum of all scores across all bowel segments. Scores range from 0 to 56, with higher scores indicating more severe disease.	
End point type	Primary
End point timeframe: Week 12 to Week 52	

Analysis Population Description (APD): All randomized participants in Placebo and Mirikizumab arms who have baseline SES-CD ≥ 7 (or ≥ 4 for isolated ileal disease) and received at least one dose of study drug.

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Per Protocol, analysis only performed on Placebo and Mirikizumab arms.

SES-CD evaluates 4 endoscopic variables in 5 bowel segments & each of the 20 individual variables is scored from 0-3: presence & size of ulcers (none = 0; diameter 0.1-0.5 cm = 1; 0.5-2 cm = 2; >2 cm = 3); extent of ulcerated surface (none = 0; <10% = 1; 10% to 30% = 2; >30% = 3); extent of affected surface (none = 0; <50% = 1; 50% to 75% = 2; >75% = 3); presence & type of narrowing (none = 0; single, can be passed = 1; multiple, can be passed = 2; cannot be passed = 3). Total = sum of all scores across all bowel segments. Scores range from 0 to 56, with higher scores indicating more severe disease. No subscore >1 is defined as no subscore >1 in any of the 20 individual variables.

APD: All randomized participants in Placebo and Mirikizumab arms who have baseline SES-CD ≥7 (or ≥4 for isolated ileal disease) and received at least one dose of study drug.

End point type	Post-hoc
----------------	----------

End point timeframe:

Week 12

Notes:

[18] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Per Protocol, analysis only performed on Placebo and Mirikizumab arms.

End point values	Placebo	Mirikizumab		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	199	579		
Units: percentage of participants				
arithmetic mean (confidence interval 99.5%)	7.0 (1.9 to 12.1)	17.6 (13.2 to 22.1)		

Statistical analyses

Statistical analysis title	Statistical Analysis 1
Comparison groups	Placebo v Mirikizumab

Number of subjects included in analysis	778

level	Other: 99.5 %
sides	2-sided
lower limit	4.1
upper limit	17.2

Post-hoc: Percentage of Adult Participants Achieving Clinical Response at Week 12 and Alternate Endoscopic Remission at Week 52 (Placebo and Mirikizumab)

End point title	Percentage of Adult Participants Achieving Clinical Response at Week 12 and Alternate Endoscopic Remission at Week 52 (Placebo and Mirikizumab) ^[19]
-----------------	---

End point description:

Clinical Response by PRO = $\geq 30\%$ decrease in SF and/or AP & neither score worse than baseline. SF (number of liquid or very soft stools) per Bristol Stool Scale Category 6 or 7 & AP (4-point scale: 0=none, 1=mild, 2=moderate, 3=severe).

Alternate endoscopic remission defined as SES-CD Total Score ≤ 4 & at least 2-point reduction from baseline & no subscore > 1 . SES-CD evaluates 4 endoscopic variables in 5 bowel segments & each of 20 individual variables scored 0-3: presence & size of ulcers (none=0; diameter 0.1-0.5 cm=1; 0.5-2 cm=2; > 2 cm=3); extent of ulcerated surface (none=0; $< 10\%$ =1; 10% to 30%=2; $> 30\%$ =3); extent of affected surface (none=0; $< 50\%$ =1; 50% to 75%=2; $> 75\%$ =3); presence & type of narrowing (none=0; single, can be passed=1; multiple, can be passed=2; cannot be passed=3). Total = sum of all scores across all bowel segments. Scores range from 0 to 56, with higher scores indicating more severe disease. No subscore > 1 is defined as no subscore > 1 in any of the 20 individual variables.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Baseline through follow up (up to 68 weeks)

Adverse event reporting additional description:

All randomized participants who received one dose of study drug. As per the pre-specified safety analysis, adverse events were reported by treatment regimen. Placebo participants who did not meet response criteria at 12-week assessment and initiated mirikizumab were censored from the Placebo arm at Week 12 and reported under Placebo Non-Responders.

Assessment type	Systematic

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

After enrolling 6 participants, sponsor elected to stop enrollment of adolescents in study AMAM and enroll pediatric participants in a separate, pediatric study. The 6 enrolled participants were allowed to continue treatment and finish the study.
