

## Clinical trial results:

### A Multicenter, Double-blind, Placebo-controlled, Randomized Withdrawal, Parallel Group Study of Patiromer for the Management of Hyperkalemia in Subjects Receiving Renin-Angiotensin-Aldosterone System Inhibitor (RAASi) Medications for the Treatment of Heart Failure (DIAMOND)

#### Summary

EudraCT number	2018-005030-38
Trial protocol	PL CZ NL ES HU DE BG GB BE IT
Global end of trial date	02 September 2021

#### Results information

Result version number	v1 (current)
This version publication date	10 September 2022
First version publication date	10 September 2022

#### Trial information

##### Trial identification

Sponsor protocol code	PAT-CR-302
-----------------------	------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT03888066
WHO universal trial number (UTN)	-
Other trial identifiers	IND number : 075615

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	02 September 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	02 September 2021
Global end of trial reached?	Yes
Global end of trial date	02 September 2021
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To assess the effects of patiromer on serum potassium (K+) in heart failure (HF) participants compared with placebo.

Protection of trial subjects:

The study was conducted in accordance with the principles of the Declaration of Helsinki including amendments in force up to and including the time the study was conducted.

The study was conducted in compliance with the International Council for Harmonisation (ICH) E6 Guideline for Good Clinical Practice (GCP), Committee for Proprietary Medicinal Products Guideline (CPMP/ICH/135/95), compliant with the EU Clinical Trial Directive (Directive 2001/20/EC) and/or the Code of Federal Regulations (CFR) for informed consent and protection of subject rights (21 CFR, Parts 50 and 56), and in accordance with United States Food and Drug Administration (FDA) regulations.

Prior to initiation of the study, the protocol, the subject information sheet, and the informed consent form (ICF) were reviewed and approved by Independent Ethics Committees (IECs) or Institutional Review Boards (IRBs), operating in accord with current regulations.

Background therapy:

Subjects receiving angiotensin-aldosterone system inhibitor (RAASi) medications for the treatment of heart failure with reduced ejection fraction (HFrEF).

During the Treatment Phase, subjects randomized to either patiromer or placebo continued the doses of RAASi medications optimized at the end of the Run-in Phase.

Evidence for comparator: -

Actual start date of recruitment	24 April 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 4
Country: Number of subjects enrolled	Poland: 80
Country: Number of subjects enrolled	Spain: 25
Country: Number of subjects enrolled	Belgium: 2
Country: Number of subjects enrolled	Bulgaria: 91
Country: Number of subjects enrolled	Czechia: 9
Country: Number of subjects enrolled	France: 2
Country: Number of subjects enrolled	Germany: 6
Country: Number of subjects enrolled	Hungary: 19
Country: Number of subjects enrolled	Italy: 7
Country: Number of subjects enrolled	Argentina: 32

Country: Number of subjects enrolled	Brazil: 16
Country: Number of subjects enrolled	Canada: 1
Country: Number of subjects enrolled	Georgia: 257
Country: Number of subjects enrolled	Israel: 12
Country: Number of subjects enrolled	Mexico: 10
Country: Number of subjects enrolled	Russian Federation: 79
Country: Number of subjects enrolled	Serbia: 8
Country: Number of subjects enrolled	Ukraine: 156
Country: Number of subjects enrolled	United States: 62
Worldwide total number of subjects	878
EEA total number of subjects	245

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	350
From 65 to 84 years	505
85 years and over	23

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

From a total of 1642 subjects screened, 1195 of these subjects entered Run-in Phase. A total of 1168 subjects received patiomer during Run-in Phase, and 878 of these subjects were randomized to receive patiomer or placebo during the Treatment Phase.

### Period 1

Period 1 title	Treatment Phase (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

The Run-in Phase was single blinded for the subject. The Treatment Phase was double-blind.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Patiomer

Arm description:

Randomized subjects who received continued treatment with patiomer during the Treatment Phase.

Arm type	Experimental
Investigational medicinal product name	Patiomer
Investigational medicinal product code	
Other name	Veltassa®
Pharmaceutical forms	Powder for oral suspension
Routes of administration	Oral use

Dosage and administration details:

The same number of packets as established for patiomer at the end of the Run-in Phase but were to be up- or down-titrated depending on local serum K<sup>+</sup> levels.

During the Run-in Phase, patiomer was to be taken at a starting oral dose of 1 packet/day (8.4 g/day) either with or without food. Based upon the K<sup>+</sup> management algorithms, patiomer was to be increased by 1 packet per day in intervals of at least 1 week ( $\pm 3$  days). If hypokalemia developed during the Treatment Phase, then the study drug was to be down-titrated (lowest acceptable dose was 0 packets/day) until local serum K<sup>+</sup>  $\geq 4.0$  mEq/l. Doses of patiomer were 0 packets/day, 1 packet/day, 2 packets/day, and 3 packets/day (maximum dose).

<b>Arm title</b>	Placebo
------------------	---------

Arm description:

Randomized subjects who discontinued treatment with patiomer of the Run-in-Phase and received placebo during the Treatment Phase.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	microcrystalline cellulose
Pharmaceutical forms	Powder for oral suspension
Routes of administration	Oral use

Dosage and administration details:

The same number of packets as established for patiomer at the end of the Run-in Phase but were to be

up- or down-titrated depending on local serum K<sup>+</sup> levels.

During the Run-in Phase, patiromer was to be taken at a starting oral dose of 1 packet/day (8.4 g/day) either with or without food. Based upon the K<sup>+</sup> management algorithms, placebo was to be increased by 1 packet per day in intervals of at least 1 week ( $\pm 3$  days). If hypokalemia developed during the Treatment Phase, then the study drug was to be down-titrated (lowest acceptable dose was 0 packets/day) until local serum K<sup>+</sup>  $\geq 4.0$  mEq/l. Doses of placebo were 0 packets/day, 1 packet/day, 2 packets/day, and 3 packets/day (maximum dose).

<b>Number of subjects in period 1</b>	Patiromer	Placebo
Started	439	439
Completed	360	367
Not completed	79	72
Sponsor's decision	1	-

Delayed visit and insufficient study drug	6	6
Protocol deviation	-	1

## Baseline characteristics

### Reporting groups

Reporting group title	Patiromer
Reporting group description: Randomized subjects who received continued treatment with patiromer during the Treatment Phase.	
Reporting group title	Placebo
Reporting group description: Randomized subjects who discontinued treatment with patiromer of the Run-in-Phase and received placebo during the Treatment Phase.	

Reporting group values	Patiromer	Placebo	Total
Number of subjects	439	439	878
Age categorical Units: Subjects			
<65 years	181	169	350
≥65 years	258	270	528
Age continuous Units: years			
arithmetic mean	66.6	67.1	
standard deviation	± 10.0	± 9.9	-
Gender categorical Units: Subjects			
Female	112	126	238
Male	327	313	640

## End points

### End points reporting groups

Reporting group title	Patiromer
Reporting group description: Randomized subjects who received continued treatment with patiromer during the Treatment Phase.	
Reporting group title	Placebo
Reporting group description: Randomized subjects who discontinued treatment with patiromer of the Run-in-Phase and received placebo during the Treatment Phase.	
Subject analysis set title	All subjects
Subject analysis set type	Full analysis
Subject analysis set description: All subjects randomized to patiromer or placebo arm.	
Subject analysis set title	All subjects - For reporting purposes
Subject analysis set type	Full analysis
Subject analysis set description: All subjects randomized to patiromer or placebo arm. As advised in the EudraCT Q&A, in order to report a statistical analysis related to a specific endpoint it is required to define at least two comparison groups. For the secondary endpoints Hyperkalemia-related Hard Outcomes Endpoints & RAASi Use Score there were no comparison groups since the results were reported for all subjects (N=878). Due to this fact, a workaround needs to be performed for reporting their statistical analyses. It is advised to create an additional "Subject analysis set" and then select both comparison groups in each "Endpoint definition" section.	

### Primary: Changes in serum K+ levels from Baseline

End point title	Changes in serum K+ levels from Baseline
End point description: Adjusted mean changes in serum K+ from Baseline.	
End point type	Primary
End point timeframe: From Day 1/Baseline to the End of Study visit	

End point values	Patiromer	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	439	439		
Units: mEq/l				
least squares mean (standard error)	0.029 (± 0.019)	0.127 (± 0.019)		

### Statistical analyses

Statistical analysis title	Difference in adjusted mean changes (SE)
Comparison groups	Patiromer v Placebo

Number of subjects included in analysis	878
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001
Method	Mixed model for repeated measures (MMRM)
Parameter estimate	Mean difference (final values)
Point estimate	-0.097
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.128
upper limit	-0.067
Variability estimate	Standard error of the mean
Dispersion value	0.015

### Secondary: Time to First Hyperkalemia Event with Serum K+ Level >5.5 mEq/l

End point title	Time to First Hyperkalemia Event with Serum K+ Level >5.5 mEq/l
End point description:	
Time to the first event of hyperkalemia with a serum K+ value >5.5 mEq/l calculated as CIF Estimate (95% CI) from the measured values. CIF = cumulative incidence function	
Number of subjects with Hyperkalemia was n=61 (13.9%) for Patiromer and n=85 (19.4%) for Placebo	
End point type	Secondary
End point timeframe:	
From Day 1/Baseline to week 90

## Statistical analyses

<b>Statistical analysis title</b>	Hazard Ratio patiromer vs placebo
-----------------------------------	-----------------------------------

Statistical analysis description:

HR = Hazard Ratio

The HR for the time to first hyperkalemia event for patiromer vs placebo was calculated. HR and p-value come from a Cox proportional regression model adjusted for geographic region, sex, Baseline T2DM status, Baseline K+ value, and Baseline eGFR.

Comparison groups	Patiromer v Placebo
Number of subjects included in analysis	878
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.006 <sup>[1]</sup>
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	0.63
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.45
upper limit	0.87

Notes:

[1] - The treatment difference between patiromer vs placebo was statistically significant.

## Secondary: Durable Enablement to Stay on MRA Target Dose

End point title	Durable Enablement to Stay on MRA Target Dose
-----------------	---

End point description:

MRA=mineralocorticoid receptor antagonist; CIF=cumulative incidence function

Time to reduction of the MRA dose below target dose calculated as CIF Estimate (95% CI) from the measured values.

Note: The reduction below the MRA target dose must last for at least 14 days (or less if at the end of study) to confirm this endpoint.

Number of subjects with MRA reduction was n=61 (13.9%) for Patiromer and n=83 (18.9%) for Placebo.

End point type	Secondary
----------------	-----------

End point timeframe:

From Day 1/Baseline to week 102)

End point values	Patiromer	Placebo

## Statistical analyses

Statistical analysis title	Win ratio for composite
----------------------------	-------------------------

Statistical analysis description:

Subjects analyzed n=1756 refers to the sum of the two comparison groups below. Win ratio approach: Patients in the new treatment and control groups are formed into matched pairs based on their risk profiles. For each matched pair, the new treatment patient is labelled winner/loser depending on CV/hyperkalemia event first. The win ratio is the total number of winners divided by the total numbers of losers. Unmatched win ratio is presented for this endpoint. Win ratio above 1 favors patiromer.

Comparison groups	All subjects v All subjects - For reporting purposes

upper limit	1.578

## Secondary: RAASi Use Score

End point title	RAASi Use Score
-----------------	-----------------

End point description:

RAASi use score (0 to 8 points) analyzed using the Win Ratio approach for each pair of subjects with the following additive components:

1. All-cause death
2. Occurrence of a CV hospitalization
3. HF medication use and dose for i) an ACEi/ARB/ARNi, ii) a MRA, and iii) a beta-blocker

Each subject in each comparison can have 0-8 points and all subjects are compared using this score at the respective appropriate follow-up time point.

RAASi = renin-angiotensin-aldosterone system inhibitor; ACE=angiotensin converting enzyme; ARB=angiotensin receptor blocker; ARNi=angiotensin receptor/neprilysin inhibitor; MRA=mineralocorticoid receptor antagonist.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
26 February 2019	Version 1.0 to Version 1.1 - Global amendment
19 October 2020	Version 2.0 - Global amendment
23 June 2021	Version 4.0 - Final version submitted worldwide.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
