

Clinical trial results:

A Pilot Open Label, Multi-dose, Phase 2 Study to Assess the Safety and Efficacy of Fazirsiran (TAK-999, ARO-AAT) in Patients with Alpha-1 Antitrypsin Deficiency Associated Liver Disease (AATD)

Summary

EudraCT number	2019-000068-86
Trial protocol	GB DE AT
Global end of trial date	14 December 2023

Results information

Result version number	v1 (current)
This version publication date	29 December 2024
First version publication date	29 December 2024

Trial information

Trial identification

Sponsor protocol code	AROAT2002

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	14 December 2023
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	14 December 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate change from baseline over time in total, soluble, and insoluble Z-AAT concentrations in the liver of patients with AAT-associated liver disease.

Protection of trial subjects:

All eligible participants had the study explained by the PI or designee. They received a full explanation, in lay terms, of the aims of the study, the discomforts, risks and benefits in taking part as well as of insurance and other procedures for compensation in case of injury. It was explained that the study is for research purposes only and was not expected to provide any therapeutic benefit to the individual. It was pointed out that they could withdraw from the study at any time without prejudice.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	31 October 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 2
Country: Number of subjects enrolled	Austria: 1
Country: Number of subjects enrolled	Germany: 13
Worldwide total number of subjects	16
EEA total number of subjects	14

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	14

From 65 to 84 years	2
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

All eligible subjects required a pre-dose biopsy completed as part of the study within the screening window. Participants consisted of male and female adult homozygous Z allele individuals (PiZZ; based on genotype completed at Screening or from a source verifiable document) alpha-1 antitrypsin patients.

Period 1

Period 1 title	Primary Study Period
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	ARO-AAT 100 mg Cohort 1b

Arm description:

Primary Study Period (6-12 months): 100 mg dose of subcutaneous ARO-AAT for a minimum of 3 doses, with 2 optional treatment extension periods.

Treatment Extension I (12 months): 100 mg dose of subcutaneous ARO-AAT every 12 weeks (Q12W).

Treatment Extension II (up to 24 Months): 100 mg dose of subcutaneous ARO-AAT Q12W.

The maximum number of doses for participants completing the treatment extension periods was 15 doses.

Arm type	Experimental
Investigational medicinal product name	ARO-AAT Injection
Investigational medicinal product code	
Other name	fazirsiran, TAK-999
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Each dose of fazirsiran will be administered by subcutaneous injection.

Arm title	ARO-AAT 200 mg Cohort 1
------------------	-------------------------

Arm description:

Primary Study Period (6-12 months): 200 mg dose of subcutaneous ARO-AAT for a minimum of 3 doses, with 2 optional treatment extension periods.

Treatment Extension I (12 months): 200 mg dose of subcutaneous ARO-AAT every 12 weeks (Q12W).

Treatment Extension II (up to 24 Months): 200 mg dose of subcutaneous ARO-AAT Q12W.

The maximum number of doses for participants completing the treatment extension periods was 15 doses.

Arm type	Experimental
Investigational medicinal product name	ARO-AAT Injection
Investigational medicinal product code	
Other name	fazirsiran, TAK-999
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Each dose of fazirsiran will be administered by subcutaneous injection.

Arm title	ARO-AAT 200 mg Cohort 2
------------------	-------------------------

Arm description:

Primary Study Period (6-12 months): 200 mg dose of subcutaneous ARO-AAT for a minimum of 5 doses, with optional treatment extension periods.

Treatment Extension I (12 months): 200 mg dose of subcutaneous ARO-AAT every 12 weeks (Q12W).
 Treatment Extension II (up to 24 Months): 200 mg dose of subcutaneous ARO-AAT Q12W.
 The maximum number of doses for participants completing the treatment extension periods was 17 doses.

Arm type	Experimental
Investigational medicinal product name	ARO-AAT Injection
Investigational medicinal product code	
Other name	fazirsiran, TAK-999
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Each dose of fazirsiran will be administered by subcutaneous injection.

Number of subjects in period 1	ARO-AAT 100 mg Cohort 1b	ARO-AAT 200 mg Cohort 1	ARO-AAT 200 mg Cohort 2
Started	4	4	8
Completed	4	4	8

Period 2

Period 2 title	Treatment Extension I
Is this the baseline period?	No

Investigational medicinal product code	
Other name	fazirsiran, TAK-999
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Each dose of fazirsiran will be administered by subcutaneous injection.

Arm title	ARO-AAT 200 mg Cohort 1
------------------	-------------------------

Arm description:

Primary Study Period (6-12 months): 200 mg dose of subcutaneous ARO-AAT for a minimum of 3 doses,

with 2 optional treatment extension periods.

Treatment Extension I (12 months): 200 mg dose of subcutaneous ARO-AAT every 12 weeks (Q12W).

Treatment Extension II (up to 24 Months): 200 mg dose of subcutaneous ARO-AAT Q12W.

The maximum number of doses for participants completing the treatment extension periods was 15 doses.

Arm type	Experimental
Investigational medicinal product name	ARO-AAT Injection
Investigational medicinal product code	
Other name	fazirsiran, TAK-999
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use
Dosage and administration details:	
Each dose of fazirsiran will be administered by subcutaneous injection.	
Arm title	ARO-AAT 200 mg Cohort 2

Arm description:

Primary Study Period (6-12 months): 200 mg dose of subcutaneous ARO-AAT for a minimum of 5 doses, with optional treatment extension periods.

Treatment Extension I (12 months): 200 mg dose of subcutaneous ARO-AAT every 12 weeks (Q12W).

Treatment Extension II (up to 24 Months): 200 mg dose of subcutaneous ARO-AAT Q12W.

The maximum number of doses for participants completing the treatment extension periods was 17 doses.

Arm type	Experimental
Investigational medicinal product name	ARO-AAT Injection
Investigational medicinal product code	
Other name	fazirsiran, TAK-999
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Each dose of fazirsiran will be administered by subcutaneous injection.

Number of subjects in period 2^[1]	ARO-AAT 100 mg Cohort 1b	ARO-AAT 200 mg Cohort 1	ARO-AAT 200 mg Cohort 2
Started	4	4	7
Completed	4	4	7

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: One subject who completed the Primary Study Period did not continue to the Treatment Extension I.

Period 3

Period 3 title	Treatment Extension II
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	ARO-AAT 100 mg Cohort 1b
Arm description:	
Primary Study Period (6-12 months): 100 mg dose of subcutaneous ARO-AAT for a minimum of 3 doses, with 2 optional treatment extension periods.	
Treatment Extension I (12 months): 100 mg dose of subcutaneous ARO-AAT every 12 weeks (Q12W).	
Treatment Extension II (up to 24 Months): 100 mg dose of subcutaneous ARO-AAT Q12W. As of global protocol version 7.0 (21-Jul-2022) / German protocol version 2.6 (29-Jul-2022) and after applicable regulatory, Ethics Committee and local approval, participants in cohort 1b switched from 100 mg to 200 mg while maintaining their dosing schedule.	
The maximum number of doses for participants completing the treatment extension periods was 15 doses.	
Arm type	Experimental
Investigational medicinal product name	ARO-AAT Injection
Investigational medicinal product code	
Other name	fazirsiran, TAK-999
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use
Dosage and administration details:	
Each dose of fazirsiran will be administered by subcutaneous injection.

Secondary: Fibrosis-4 index (FIB4) Score Values Over Time: Cohorts 1/1b

End point title	Fibrosis-4 index (FIB4) Score Values Over Time: Cohorts
-----------------	---------------------------------------------------------

End point description:

The FIB 4 score evaluates the degree of fibrosis in patients suspected of or already diagnosed with hepatic fibrosis. FIB-4 is calculated as (Age (years) * aspartate aminotransferase) / (platelets * $\sqrt{\text{ALT}}$).

The result provided from the above equation is interpreted according to two cut off values:

FIB 4 <1.45 indicates absence of cirrhosis (with a negative predictive value of 90% for advanced fibrosis);

FIB 4 between 1.45 - 3.25 are deemed inconclusive;

FIB 4 >3.25 indicates cirrhosis (with a positive predictive value of 65% for advanced fibrosis).

Safety Analysis Set: all participants who received at least one dose of study drug; n=participants with an assessment at given time point.

Secondary: Number of Participants With Treatment-Emergent Adverse Events (TEAEs)

End point title	Number of Participants With Treatment-Emergent Adverse Events (TEAEs)
-----------------	-----------------------------------------------------------------------

End point description:

An Adverse Event (AE) is any untoward medical occurrence which does not necessarily have to have a causal relationship with this treatment. Serious Adverse Event (SAE) is an AE that results in death, is life-threatening, requires inpatient hospitalization or prolongation of an existing hospitalization, results in persistent or significant disability/incapacity, Is a congenital anomaly/birth defect, Is a medically important event or reaction. TEAEs are AEs with onset after administration of the study drug, or when a preexisting medical condition increases in severity or frequency after study drug administration. Not related events include those reported as 'Not Related' to study drug. Related events include those reported as 'Possibly Related' or 'Probably Related' to study drug.

Safety Analysis Set: all participants who received at least one dose of study drug.

End point type	Secondary
End point timeframe:

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
30 April 2019	OVERVIEW/RATIONALE: 1. The protocol was amended in response to recommendations based on review by the Medicines and Healthcare Products Regulatory Agency (MHRA). 2. Correction of administrative, grammatical, formatting errors and inconsistencies; rewording for clarity.
10 March 2020	OVERVIEW/RATIONALE: 1. The protocol was amended to include cohort 1b at 100mg (N=4) as well as to add the inclusion of patients with Metavir F1 fibrosis or equivalent. • A 100mg cohort was added to compare with the 200mg cohort to see if study endpoints may have a dose response relationship. • An F1 fibrosis score (or equivalent) will be allowed as the study endpoints are now considered to be independent of the need to have Metavir fibrosis F2 and F3, or equivalent. 2. Correction of administrative, grammatical, formatting errors and inconsistencies; rewording for clarity.
14 October 2020	OVERVIEW/RATIONALE: 1. The primary endpoint has been revised to evaluation of change (from baseline over time) in total, soluble and insoluble Z-AAT concentrations in the liver of study patients. The primary rationale for protocol version 4.0 is to better align primary and secondary endpoints with the stated purpose of the study. This is an open label pilot study, intended to evaluate various pharmacodynamic markers as well as to explore treatment effect variability with different treatment durations (e.g. biopsy at approximately 6, 12, 18- and 24-months post-dose). This will help to inform on the length of treatment required in later stage studies. A histologic AATD liver disease activity scale was originally proposed as a primary endpoint. This was a placeholder endpoint as sponsor was investigating the development of a histologic grading scale of liver disease severity in AATD patients. While histologic endpoints are still included, in protocol version 4.0 the primary endpoint has been changed to liver Z-AAT protein. Liver Z-AAT has been thoroughly described as the causative factor of AATD liver disease and liver Z-AAT protein correlates with severity of liver fibrosis and with clinical outcomes. Intra-hepatic Z-AAT protein is also readily quantifiable using a validated assay and does not suffer from intra-reader or inter-reader variability as is the case for pathologist histologic evaluation. Thus, it is more likely to reliably identify differences in pharmacodynamic effect with different treatment durations. Additionally, histologic characteristics found in AATD liver disease (e.g. peri-portal inflammation, steatosis) overlap with those found in other common liver diseases such as NAFLD and NASH which may not respond to ARO-AAT and may confound evaluation of treatment effect. In contrast, intra-hepatic Z-AAT protein is only present in the livers of patients with AATD. For these reasons, liver Z-AAT is now the primary endpoint of the study.

14 October 2020	<p>(continued)</p> <p>2. Rationale for additional endpoint changes:</p> <ul style="list-style-type: none"> • Serum Z-AAT levels have been shifted to the 1st secondary endpoint as serum levels correlate well with intra-hepatic total Z-AAT, consistent with the liver as the main source of serum AAT. • Changes in ALT and GGT were prioritized as secondary endpoints as these are clinically relevant biomarkers of liver disease and have been shown to associate with severity of liver disease in an AATD population (Clark et al., 2018). • Other non-invasive measures of liver fibrosis including FibroScan and Pro-C3 have also been shifted to secondary endpoints. Histologic parameters are still included as secondary endpoints and will be evaluated. • MRE has become more broadly available and is included as an additional exploratory assessment of liver fibrosis. • Consequently, the study title was also revised. <p>3. Correction of administrative, grammatical, formatting errors and inconsistencies; rewording for clarity.</p>
10 February 2021	<p>GENERAL OVERVIEW:</p> <p>1. The Global Protocol has been amended to extend the Extension phase of the study by one year. For design clarity, the initial dosing period of the study is referred to as the Primary Study Period and the treatment extension period is referred to as Treatment Extension I and Treatment Extension II (12 month duration for each).</p> <p>2. Correction of administrative, grammatical, formatting errors and inconsistencies; rewording for clarity.</p> <p>Major changes:</p> <p>1. Protocol Synopsis: The study has been extended for an additional year to include a new Treatment Extension II after Week 44.</p> <p>Rationale: The extension period allows subjects to remain on continuous ARO-AAT treatment for long-term safety evaluation. During this period, subjects will have the option to continue to receive the same dose level of ARO-AAT Q12W for up to an additional 12 months or until they roll over into another long-term Extension study, whichever comes first.</p> <p>2. Protocol Synopsis: Secondary Endpoint : Secondary Endpoint was revised to replace Ishak with Metavir.</p> <p>Rationale: Although both methods are recognized methods for evaluating fibrosis, Metavir has a smaller scale and is more widely used in clinical practice.</p>
16 November 2021	<p>(continued)</p> <p>GENERAL OVERVIEW:</p> <p>1. The Global Protocol has been amended to extend the Extension II part of the study by one year.</p> <p>2. Assessment of immunogenicity (Incidence of anti-drug antibodies (ADAs) to ARO-AAT) was added as a safety endpoint.</p> <p>3. Collection of ADAs was added.</p> <p>4. Correction of administrative, grammatical, formatting errors and inconsistencies; rewording for clarity.</p> <p>Major Changes:</p> <p>1. Protocol Synopsis: Study Design/Methods: Extension II part of the study has been extended for an additional year.</p> <p>Rationale: The extension period allows subjects to remain on continuous ARO-AAT treatment for long-term safety evaluation. During this period, subjects will have the option to continue to receive the same dose level of ARO-AAT Q12W for up to an additional 12 months or until they roll over into another long-term Extension study, whichever comes first.</p> <p>2. Protocol Synopsis: Secondary Endpoints: Assessment of immunogenicity (Incidence of anti-drug antibodies to ARO-AAT) was added as a safety endpoint.</p> <p>Rationale: Although results from a Phase I study (AROAAT1001) showed no evidence of drug-induced de novo formation of anti-ARO-AAT antibody formation after single or repeat doses of ARO-AAT in the healthy adult volunteers enrolled in study, anti-drug antibody (ADA) assessment has been added as a safety endpoint in study AROAAT2002. ADA was included to further evaluate the potential for immunogenicity following ARO-AAT treatment in patients with AATD.</p>

21 July 2022	<p>GENERAL OVERVIEW:</p> <p>1. This global protocol has been amended to inform of fazirsiran dose selection by the Sponsor based on review of cumulative safety, efficacy, and pharmacodynamics data from the fazirsiran clinical program . The amendment specifies that all subjects continuing in Extension Treatment Period II will receive the selected fazirsiran dose (200 mg) following the respective country regulatory and ethics committees' approvals (including local approvals as necessary) of AROAAT2002 protocol amendment v7.0. As such, all ongoing subjects in Extension Treatment Period II will be consented and subjects in Cohort 1b (100 mg) will begin receiving the selected dose at the next scheduled dosing timepoint.</p> <p>2. Pulmonary function test (PFT) text was updated to clarify instructions for performing spirometry and diffusing capacity for carbon monoxide (DLCO), to acknowledge acceptability of following bronchodilator administration as per site practice, and to describe specific PFT data to include on the electronic case report form (eCRF).</p> <p>3. The repeat liver biopsy in the treatment extension period will be optional.</p> <p>4. Vital signs measurement and electrocardiogram (ECG) assessment text was updated to clarify patient positioning during the assessments.</p> <p>5. Methods sections were updated to change the current pre-dose window for assessments from 60 minutes to 3 hours.</p> <p>6. Investigational product (IP) nomenclature was updated to include fazirsiran and TAK-999 (also referred to as ARO-AAT). Drug product nomenclature was updated to include Fazirsiran Injection.</p> <p>7. Fazirsiran supply, preparation, storage, and labelling information was updated, and includes guidance on allowing the fazirsiran vial to come to room temperature before administration.</p> <p>8. A new section was added to provide more detail on pregnancy reporting.</p> <p>9. Text was revised to make administrative updates, correct grammatical and formatting errors and inconsistencies, update abbreviations, update references.</p>
