Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	19 January 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	19 January 2022
Global end of trial reached?	Yes
Global end of trial date	19 January 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study is to compare the efficacy of intranasal administration of twice-daily doses of 186 and 372 µg of OPN-375 (fluticasone propionate) with placebo in subjects with chronic sinusitis using the following co-primary endpoints:

- change from baseline in symptoms as measured by a composite score of nasal symptoms (CSNS): congestion, facial pain or pressure sensation, and nasal discharge (anterior and/or posterior) at the end of Week 4

and

- change from baseline to Week 24/Early Termination (ET) in the average percent of the volume opacified (APOV) in the ethmoid and maxillary sinuses

Protection of trial subjects:

Subjects will be informed that they are free to withdraw from study treatment and/or the study at any time at their own request without prejudice to their future medical care, or that they may be withdrawn at any time at the discretion of the investigator or Sponsor for safety, nonadherence to protocol requirements, or administrative reasons (eg, termination of study by Sponsor). Subjects wishing to withdraw from study treatment will be strongly encouraged to continue in the study and have all scheduled study procedures performed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 November 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Russian Federation: 24
Country: Number of subjects enrolled	Canada: 16
Country: Number of subjects enrolled	United States: 183
Country: Number of subjects enrolled	Poland: 90
Country: Number of subjects enrolled	Sweden: 8
Country: Number of subjects enrolled	United Kingdom: 2
Country: Number of subjects enrolled	Bulgaria: 7
Country: Number of subjects enrolled	Georgia: 2
Worldwide total number of subjects	332
EEA total number of subjects	105

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	277
From 65 to 84 years	54
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

This study was carried out in subjects with chronic sinusitis with or without nasal polyps.

Pre-assignment

Screening details:

Subjects who met eligibility criteria at screening were dispensed a single-blind kit containing 2 placebo units marked "1" and "2" for use during the 7- to 21-day. Subjects self-administered 1 spray per nostril each morning and evening. Symptoms were assessed to ensure symptom eligibility criteria and a CT scan was obtained if necessary.

Pre-assignment period milestones

Number of subjects started	556 ^[1]
Number of subjects completed	332

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Not eligible for study treatment: 224
----------------------------	---------------------------------------

Notes:

[1] - The number of subjects reported to have started the pre-assignment period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 224 subjects failed screening and were never enrolled into the study

Period 1

Period 1 title	Double-blind Treatment Phase (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Placebo nasal spray, 1 or 2 sprays per nostril twice daily

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
13 February 2019	Required subjects to administer 2 sprays per nostril for each dose of randomized study treatment; identified the co-primary endpoint related to nasal symptoms as the CSNS ("CSS" in all reports including this CSR); extended the single-blind run-in period from 14 to 21 days; modified inclusion/exclusion criteria; added assessments of NP grading to Weeks 4, 12, and 24; added IOP >21 mmHg, nasal septal perforation, and new onset or worsening of cataracts to withdrawal criteria; and provided additional details/clarifications for primary and IAs.
05 December 2019	Modified inclusion/exclusion criteria; added a biomarker substudy (no analysis done due to low number of participating subjects); revised the endpoint related to sinus volume occupied by disease from evaluating "each" maxillary and ethmoid sinus occupied by disease to evaluating the "worst" maxillary and "worst" ethmoid sinus; and added an assessment of the impact of treatment on subjects approved for surgery who no longer elect to undergo surgery.
15 June 2020	Amendments 3 (15 June 2022) and 4 (21 August 2020): Modified the protocol in reaction to the COVID-19 pandemic. Most notably, nasal endoscopy and associated polyp grading were removed from Visits 3 and 5; ocular examinations were removed; and subjects were allowed to delay the Week 24 Visit in case of COVID-19 or any upper respiratory infection and continue taking study drug until they could have the Week 24 Visit. Also, remote visits were allowed as needed and provisions were made for completing PROs remotely.
21 August 2020	Amendments 3 (15 June 2022) and 4 (21 August 2020): Modified the protocol in reaction to the COVID-19 pandemic. Most notably, nasal endoscopy and associated polyp grading were removed from Visits 3 and 5; ocular examinations were removed; and subjects were allowed to delay the Week 24 Visit in case of COVID-19 or any upper respiratory infection and continue taking study drug until they could have the Week 24 Visit. Also, remote visits were allowed as needed and provisions were made for completing PROs remotely.
23 July 2021	Modified key secondary and other secondary objectives/endpoints by moving SF-36 MCS and PCS endpoints from key secondary to other secondary; added key secondary objectives/endpoints to be analyzed using pooled data from Studies 3205 and 3206; and updated sample size text.
07 January 2022	Modified key secondary and other secondary objectives/endpoints by moving SNOT-22 total score from key secondary to other secondary; moving SNOT22 and PSQI endpoints to be analyzed using pooled data from Studies 3205 and 3206 from key secondary to other secondary; and adding CSS total score and frequency of acute exacerbations of chronic sinusitis (both analyzed using pooled data from Studies 3205 and 3206) in subjects who were using a standard nasal steroid at study entry to key secondary objectives. Other changes were removal of the biomarker substudy, updates of statistical methods to reflect the changes in key and other secondary objectives/endpoints, and modifications/clarifications to poor score assignments for various endpoints in case of intercurrent events and sensitivity analyses for the APOV co-primary endpoint.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
