Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 August 2024
Is this the analysis of the primary completion data?	Yes
Primary completion date	08 September 2021
Global end of trial reached?	Yes
Global end of trial date	26 August 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

This study will evaluate the safety and efficacy of a switch to MK-8591A (a fixed dose combination of doravirine and islatravir) in human immunodeficiency virus -1 (HIV-1)-infected participants virologically suppressed on a protocol-specified antiretroviral regimen. The primary hypothesis is that a switch to MK-8591A will be non-inferior to continued treatment with baseline antiretroviral therapy (ART) as assessed by the percentage of participants with HIV-1 ribonucleic acid (RNA) ≥ 50 copies/mL at Week 48.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	18 February 2020
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	33 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 20
Country: Number of subjects enrolled	Canada: 39
Country: Number of subjects enrolled	Chile: 31
Country: Number of subjects enrolled	Colombia: 31
Country: Number of subjects enrolled	France: 37
Country: Number of subjects enrolled	Italy: 37
Country: Number of subjects enrolled	Japan: 23
Country: Number of subjects enrolled	New Zealand: 7
Country: Number of subjects enrolled	Poland: 29
Country: Number of subjects enrolled	Russian Federation: 46
Country: Number of subjects enrolled	South Africa: 77
Country: Number of subjects enrolled	Spain: 51
Country: Number of subjects enrolled	Switzerland: 65
Country: Number of subjects enrolled	United Kingdom: 36
Country: Number of subjects enrolled	United States: 143

Worldwide total number of subjects	672
EEA total number of subjects	154

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	637
From 65 to 84 years	35
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Adult HIV-1-infected participants receiving baseline ART were enrolled in this study. 672 participants were randomly assigned in a 1:1 ratio to either Group 1: switch baseline ART to doravirine (DOR)/islatravir (ISL) on Day 1 to Week 96; or Group 2: continue baseline ART until Week 48 then switch to DOR/ISL from Week 48 to Week 96.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Group 1: Doravirine/Islatravir (DOR/ISL)
------------------	--

Arm description:

Participants who were previously treated with continuous baseline antiretroviral therapy (ART) received DOR/ISL, a fixed dose combination (FDC) of 100 mg doravirine (DOR)/0.75 mg islatravir (ISL) orally once daily for 96 weeks.

Arm type	Experimental
Investigational medicinal product name	doravirine (DOR)/islatravir (ISL)
Investigational medicinal product code	
Other name	MK-8591A
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

A fixed dose combination (FDC) of 100 mg DOR/ 0.75 mg ISL taken in tablet form, orally, once daily

Arm title	Group 2: Baseline Antiretroviral Therapy (ART)
------------------	--

Arm description:

Participants received continuous baseline ART for 48 weeks. Continuing participants delayed switch over from baseline ART to DOR/ISL, fixed dose combination of 100 mg DOR/0.75 mg ISL orally once daily, from Week 48 to Week 96, a total DOR/ISL treatment duration of 48 Weeks.

Arm type	Active comparator
Investigational medicinal product name	Baseline ART Regimen
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Baseline ART regimen will be administered as per approved label. ART medication will not be provided by the Sponsor; participants will provide their own ART medications. Allowed drug classes include nucleoside analog reverse transcriptase inhibitors (NRTIs), non-nucleoside reverse transcriptase inhibitors (NNRTIs), protease inhibitors (PIs), integrase strand transferase inhibitors (INSTIs), fusion inhibitors, chemokine receptor 5 (CCR5) antagonists, post-attachment inhibitor, and pharmacokinetic (PK) boosters.

Investigational medicinal product name	doravirine (DOR)/islatravir (ISL)
Investigational medicinal product code	
Other name	MK-8591A
Pharmaceutical forms	Tablet

Routes of administration	Oral use
--------------------------	----------

Dosage and administration details:

A fixed dose combination (FDC) of 100 mg DOR/ 0.75 mg ISL taken in tablet form, orally, once daily

Number of subjects in period 1	Group 1: Doravirine/Islatravir (DOR/ISL)	Group 2: Baseline Antiretroviral Therapy (ART)
Started	336	336
Group 1 DOR/ISL Weeks 0-48	336	0 ^[1]
Group 1 DOR/ISL Weeks 48-96	322	0 ^[2]
Group 2 Baseline ART Weeks 0-48	0 ^[3]	336
Group 2 Switch to DOR/ISL Weeks 48-96	0 ^[4]	326
Completed	279	299
Not completed	57	37
Physician decision	10	6
Consent withdrawn by subject	35	17
Not Reported	7	8
Death	1	1
Lost to follow-up	4	5

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Per protocol, Group 1 DOR/ISL from Weeks 0-48 is not applicable to Group 2: Baseline ART arm.

[2] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Per protocol, Group 1 DOR/ISL from Weeks 48-96 is not applicable to Group 2: Baseline ART arm.

[3] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Per protocol, Group 2 Baseline ART from Weeks 0-48 is not applicable to Group 1: DOR/ISL arm.

[4] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Per protocol, Group 2 Baseline ART Switch to DOR/ISL is not applicable to Group 1: DOR/ISL arm.

Baseline characteristics

Reporting groups

Reporting group title	Group 1: Doravirine/Islatravir (DOR/ISL)
Reporting group description:	
Participants who were previously treated with continuous baseline antiretroviral therapy (ART) received DOR/ISL, a fixed dose combination (FDC) of 100 mg doravirine (DOR)/0.75 mg islatravir (ISL) orally once daily for 96 weeks.	
Reporting group title	Group 2: Baseline Antiretroviral Therapy (ART)
Reporting group description:	
Participants received continuous baseline ART for 48 weeks. Continuing participants delayed switch over from baseline ART to DOR/ISL, fixed dose combination of 100 mg DOR/0.75 mg ISL orally once daily, from Week 48 to Week 96, a total DOR/ISL treatment duration of 48 Weeks.	

Reporting group values	Group 1: Doravirine/Islatravir (DOR/ISL)	Group 2: Baseline Antiretroviral Therapy (ART)	Total
Number of subjects	336	336	672
Age categorical			
Units: Subjects			
In utero	0	0	0
Preterm newborn infants (gestational age < 37 wks)	0	0	0
Newborns (0-27 days)	0	0	0
Infants and toddlers (28 days-23 months)	0	0	0
Children (2-11 years)	0	0	0

Plasma CD4+ T-Cell Count was measured in cells/mm³ for baseline and 96 weeks. Baseline measurements were defined as the Day 1 value of each participant. The mean percent change from baseline to Week 96 in CD4+ T-cell count is reported for Group 1 participants. The analysis population consisted of all randomized participants in Group 1 who received at least one dose of study intervention and had data, including baseline data, available for this outcome measure. Per protocol, the percentage change from baseline in CD4+ T-cell count at Week 96 for Group 2 participants was not planned or conducted.

End point type	Secondary

End point timeframe:

Baseline and Week 96

End point values	Group 1: Doravirine/Islatravir (DOR/ISL)	Group 2: Baseline Antiretroviral Therapy (ART)		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	284 ^[14]	0 ^[15]		
Units: Percentage Change				
arithmetic mean (confidence interval 95%)	4.49 (0.56 to 8.43)	(to)		

Notes:

[14] - Number of subjects analyzed is Group 1 treated participants with data available

[15] - Per protocol, this endpoint is for Group 1 only; Group 2 analysis was not planned or conducted.

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of Participants with evidence of viral drug resistance-associated substitutions at Week 96

End point title	Percentage of Participants with evidence of viral drug resistance-associated substitutions at Week 96
-----------------	---

End point description:

Viral drug resistance was defined as participants with confirmed HIV-1 RNA ≥ 400 copies/mL and/or genotypic or phenotypic analysis of data showing evidence of resistance to the study drug administered. The percentage of participants who demonstrate drug resistance at Week 96 is presented for Group 1 and Group 2 participants who switched-over from baseline ART to receive DOR/ISL treatment from Week 48 to Week 96. The analysis population consisted of participants with virologic rebound (2 repeated incidents of HIV-1 RNA ≥ 200 copies/mL, 2-4 weeks apart) or who discontinued study intervention with HIV-1 RNA ≥ 200 copies/mL. Participants with available data showing resistance, despite viral load, are included. Per protocol, percentage of participants with evidence of viral drug resistance associated substitutions from week 0 to week 48 for Groups 1 and 2 is a separate outcome measure reported earlier in the record.

End point type	Secondary

Secondary: Change from baseline to Week 24 in fasting lipids in participants on protease inhibitor (PI)-containing regimens (including PI- and integrase strand transferase inhibitor [InSTI]-containing regimens)

End point title	Change from baseline to Week 24 in fasting lipids in participants on protease inhibitor (PI)-containing regimens (including PI- and integrase strand transferase inhibitor [InSTI]-containing regimens)
-----------------	---

End point description:

Blood serum samples were taken at baseline and Week 24. Per protocol, this outcome analysis was conducted in participants on PI-containing regimens (including PI- and InSTI-containing regimens), excluding participants who took lipid-lowering therapy during the study. The fasting lipids consisted of fasting cholesterol, fasting high density lipoprotein (HDL) cholesterol, fasting low density lipoprotein (LDL) cholesterol, fasting non-HDL cholesterol, and fasting triglycerides. The mean change from baseline to Week 24 in fasting lipids is presented. The analysis population consisted of all randomized participants on PI-containing regimens (including PI- and InSTI-containing regimens) who received at least one dose of study intervention and had baseline and Week 24 data available for each lipid type, excluding participants who took lipid-lowering therapy during the study, per protocol.

[44] - Treatment Difference vs Baseline ART. Superiority will be concluded if the upper bound of the 2-sided multiplicity-adjusted 95% CI is less than 0 percentage points. The multiplicity adjusted 95% CIs for treatment difference were calculated from ANCOVA models with terms for baseline measurement and treatment. Group 1: Doravirine/Islatravir (DOR/ISL) n=29; Group 2: Baseline Antiretroviral Therapy (ART) n=35).

[45] - The significance level in ANCOVA model was $0.02497/2=0.012485$. The p-value is statistically significant if it is $<0.02497/2=0.012485$.

Secondary: Change from baseline to Week 48 in fasting lipids in participants on InSTI-based regimens (non-PI containing regimens)

End point title	Change from baseline to Week 48 in fasting lipids in participants on InSTI-based regimens (non-PI containing regimens)
-----------------	--

End point description:

Blood serum samples were taken at baseline and Week 48. Per protocol, this outcome analysis was conducted in participants on InSTI-based regimens (non-PI containing regimens), excluding participants who took lipid-lowering therapy during the study. The fasting lipids consisted of fasting cholesterol, fasting HDL cholesterol, fasting LDL cholesterol, fasting non-HDL cholesterol, and fasting triglycerides. The mean change from baseline to Week 48 in fasting lipids is presented. The analysis population consisted of all randomized participants on InSTI-based regimens (non-PI containing regimens) who received at least one dose of study intervention and had baseline and Week 48 data available for each lipid type, excluding participants who took lipid-lowering therapy during the study, per protocol.

subjects affected / exposed	42 / 322 (13.04%)		
occurrences (all)	42		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
16 June 2020	Amendment 02: The protocol was amended to: (1) allow participants to rescreen one time following approval from the Sponsor, and (2) add a scheduled study visit at Week 52 so that participants in Group 2 can be monitored 4 weeks after switching to DOR/ISL.
15 January 2021	Amendment 03: The main reasons the protocol was amended were to: (1) permit continued administration of study intervention in participants who become pregnant (where allowed by local regulations and as appropriate based on available data/local standard of-care guidelines), (2) add a discontinuation criterion if a participant chooses to breastfeed, and (3) update dose modification instructions.
12 May 2021	Amendment 04: Additional pharmacokinetics (PK) sampling and increased safety monitoring for participants who become pregnant and continue study intervention. Increased safety data collection for infants born to participants who become pregnant.
26 January 2022	Amendment 05: To increase frequency of monitoring of CD4+ T-cell counts and lymphocyte counts, and to add discontinuation criteria in response to findings of decreases in CD4+ T-cell counts (in studies of participants with HIV) and lymphocytes (in studies of participants with or without HIV) in ISL clinical studies. Note: The changes made in Amendment 05 were not implemented at clinical sites. Amendment 06 supersedes Amendment 05.
16 February 2022	Amendment 06: Given the findings of decreases in CD4+ T-cell and total lymphocyte counts in clinical studies evaluating ISL, the protocol is being amended to increase the frequency of monitoring of CD4+ T-cell and total lymphocyte counts and to specify the management of participants who meet protocol-defined decreases in CD4+ T-cell and/or total lymphocyte counts.
08 December 2022	Amendment 08: Merck Sharp & Dohme Corp. underwent an entity name and address change to Merck Sharp & Dohme LLC, Rahway, NJ, USA. This conversion resulted only in an entity name change and update to the address.
24 April 2024	Amendment 09: The protocol was amended to revise the post-treatment management of participants with specific decreases in CD4+ T-cell or total lymphocyte counts. The recovery criteria were revised to account for normal physiologic variability in CD4+ T-cell or total lymphocyte counts and the frequency of monitoring was updated to minimize the burden on study participants.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
