Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 November 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	21 November 2022
Global end of trial reached?	Yes
Global end of trial date	01 November 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

This is a 2-part, phase 3 clinical study evaluating the antiretroviral activity and safety/tolerability of islatravir (ISL), doravirine (DOR), and a fixed dose combination (FDC) of DOR/ISL (also known as MK-8591A) in heavily treatment-experienced (HTE) participants with human immunodeficiency virus type 1 (HIV-1) infection. It is hypothesized that the percentage of participants receiving DOR/ISL to achieve $\geq 0.5 \log_{10}$ decrease in HIV-1 ribonucleic acid (RNA) from study baseline (Day 1) to Day 8 is superior to placebo, each given in combination with failing antiretroviral therapy (ART).

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	18 March 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 1
Country: Number of subjects enrolled	Canada: 1
Country: Number of subjects enrolled	Chile: 1
Country: Number of subjects enrolled	Colombia: 1
Country: Number of subjects enrolled	France: 3
Country: Number of subjects enrolled	Germany: 1
Country: Number of subjects enrolled	United Kingdom: 1
Country: Number of subjects enrolled	Italy: 4
Country: Number of subjects enrolled	Korea, Republic of: 2
Country: Number of subjects enrolled	South Africa: 6
Country: Number of subjects enrolled	Peru: 1
Country: Number of subjects enrolled	Russian Federation: 5
Country: Number of subjects enrolled	Ukraine: 1
Country: Number of subjects enrolled	United States: 7
Worldwide total number of subjects	35
EEA total number of subjects	8

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	34
From 65 to 84 years	1
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Heavily Treatment-Experienced (HTE) adult participants with Human Immunodeficiency Virus Type 1 (HIV-1) infection and currently on failing antiretroviral therapy (ART) were enrolled in this study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	ISL + ART

Arm description:

HTE participants with HIV-1 infection took islatravir (ISL) 0.75 mg once daily (QD) in combination with failing ART from Day 1 to Day 7; followed by open-label 100 mg doravirine (DOR)/0.75 mg ISL fixed dose combination (FDC) QD + optimized background therapy (OBT) from Day 8 to Week 97.

Arm type	Experimental
Investigational medicinal product name	Doravirine/Islatravir
Investigational medicinal product code	
Other name	MK-8591A
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

100 mg doravirine /0.75 mg islatravir FDC QD from day 8 to Day 97

Investigational medicinal product name	Islatravir
Investigational medicinal product code	
Other name	MK-8591
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

0.75 mg islatravir once daily (QD) from day 1 to 7

Arm title	DOR + ART
------------------	-----------

Arm description:

HTE participants with HIV-1 infection took DOR 100 mg QD in combination with failing ART from Day 1 to Day 7; followed by open-label 100 mg DOR/0.75 mg ISL FDC QD + OBT from Day 8 to Week 97.

Arm type	Experimental
Investigational medicinal product name	Doravirine
Investigational medicinal product code	
Other name	MK-1439
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

100 mg doravirine QD from day 1 to 7

Investigational medicinal product name	Doravirine/Islatravir
Investigational medicinal product code	
Other name	MK-8591A
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

100 mg doravirine /0.75 mg islatravir fixed dose combination (FDC) QD from day 8 to Day 97

Arm title	DOR/ISL + ART
------------------	---------------

Arm description:

HTE participants with HIV-1 infection took 100 mg DOR/0.75 mg ISL FDC QD in combination with failing ART from Day 1 to Day 7; followed by open-label 100 mg DOR/0.75 mg ISL FDC QD + OBT from Day 8 to Week 97.

Arm type	Experimental
Investigational medicinal product name	Doravirine/Islatravir
Investigational medicinal product code	
Other name	MK-8591A
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

100 mg doravirine /0.75 mg islatravir FDC QD from day 1 to Day 97

Arm title	Placebo + ART
------------------	---------------

Arm description:

HTE participants with HIV-1 infection took placebo QD in combination with failing ART from Day 1 to Day 7; followed by open-label 100 mg DOR/0.75 mg ISL FDC QD + OBT from Day 8 to Week 97.

Arm type	Placebo
Investigational medicinal product name	Placebo to islatravir
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Placebo matched to islatravir

Investigational medicinal product name	Doravirine/Islatravir
Investigational medicinal product code	
Other name	MK-8591A
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

100 mg doravirine /0.75 mg islatravir FDC QD from day 8 to Day 97

Investigational medicinal product name	Placebo to doravirine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo matched to doravirine

Secondary: Change from baseline Day 8 to Week 25 in CD4+ T-cell counts from the pooled treatment group

End point title	Change from baseline Day 8 to Week 25 in CD4+ T-cell counts from the pooled treatment group
-----------------	---

End point description:

The change from baseline Day 8 to Week 25 in CD4+ T-cell counts was determined by the central laboratory.. The within-group 95% CIs were calculated based on the t-distribution. Analysis of the pooled treatment group was planned per protocol. The population analyzed was randomized participants who received at least 1 dose of study intervention, had baseline data for those analyses that require baseline data, and had not committed any major protocol violations. Examples of protocol violations include, but are not limited to nonadherence to study intervention; or becoming pregnant.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All-Cause Mortality (ACM): from randomization up to Week 49; Adverse Events (AE): from treatment (Day 1) Up to Week 97

Adverse event reporting additional description:

All randomized participants who received at least 1 dose of study intervention based on the treatment group to which they were randomized.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
30 April 2020	Amendment 01: Assessment of fasting lipid and glucose profiles were added to the protocol.
24 June 2020	Amendment 02: Allow participants to rescreen following consultation with the Sponsor. The lower age limit of 12 years was removed.
08 January 2021	Amendment 03: Extend Part 2 of the study from 48 weeks to 96 weeks of open-label intervention with DOR/ISL + OBT, permit continued administration of study intervention in participants who become pregnant, add a discontinuation criterion if a participant chooses to breastfeed, and add a Per-Protocol analysis to the SAP.
12 July 2021	Amendment 06: Modified inclusion criteria to clearly characterize the HTE study population as individuals with no more than 2 fully active antiretroviral drugs across all approved antiretroviral classes.
23 February 2022	Amendment 08: Given the findings of decreases in CD4+ T-cell and total lymphocyte counts in clinical studies evaluating ISL, the protocol is being amended to increase the frequency of monitoring of CD4+ T-cell and total lymphocyte counts and to specify the management of participants who meet protocol-defined decreases in CD4+ T-cell and/or total lymphocyte counts.
26 September 2022	Amendment 09: Merck Sharp & Dohme Corp. underwent an entity name and address change to Merck Sharp & Dohme LLC, Rahway, NJ, USA. This conversion resulted only in an entity name change and update to the address.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
