

Clinical trial results:

A Phase 2b, Multicenter, Double-blind, Active-controlled, Randomized Study to Investigate the Efficacy and Safety of Different Combination Regimens Including JNJ-73763989 and/or JNJ-56136379 for the Treatment of Chronic Hepatitis B Virus Infection

Summary

EudraCT number	2019-000622-22
Trial protocol	GB FR DE CZ ES BE IT
Global end of trial date	26 April 2022

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 April 2022
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	26 April 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main purpose of this trial was to establish the dose-response relationship for antiviral activity of 3 doses of JNJ-73763989 + NA and to evaluate the efficacy of combination regimens of JNJ-73763989 + NA (with and without JNJ-56136379) and of JNJ-56136379+NA.

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with Good Clinical Practices and applicable regulatory requirements.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	02 August 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 19
Country: Number of subjects enrolled	Brazil: 4

Country: Number of subjects enrolled	France: 22
Country: Number of subjects enrolled	United Kingdom: 12
Country: Number of subjects enrolled	Hong Kong: 11
Country: Number of subjects enrolled	Italy: 30
Country: Number of subjects enrolled	Japan: 61
Country: Number of subjects enrolled	Korea, Republic of: 10
Country: Number of subjects enrolled	Malaysia: 18
Country: Number of subjects enrolled	Poland: 37
Country: Number of subjects enrolled	Russian Federation: 62
Country: Number of subjects enrolled	Thailand: 23
Country: Number of subjects enrolled	Turkey: 49
Country: Number of subjects enrolled	United States: 21

Worldwide total number of subjects	470
EEA total number of subjects	173

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	462
From 65 to 84 years	8
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Out of 471 randomised subjects, only 470 subjects were analysed and treated with study drug.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Arm 1: JNJ-73763989 (100 mg) + JNJ-56136379 (250 mg) + NA

Arm description:

Subjects received JNJ-73763989 100 milligrams (mg) as subcutaneous (SC) injection once every 4 weeks along with JNJ-56136379 250 mg as oral tablet once daily and Nucleos(t)ide Analog (NA) (either entecavir [ETV] monohydrate 0.5 mg, tenofovir disoproxil fumarate [TDF] 300 mg, or tenofovir alafenamide [TAF] 25 mg) tablet orally once daily up to 48 weeks. Subjects were followed up to Week 96.

Arm type	Experimental
Investigational medicinal product name	JNJ-73763989
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received JNJ-73763989 100 mg as subcutaneous (SC) injection up to 48 weeks.

Investigational medicinal product name	Nucleos(t)ide Analog (NA)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received NA treatment (either ETV 0.5 mg, TDF 300 mg, or TAF 25 mg) orally up to 48 weeks.

Investigational medicinal product name	JNJ-56136379
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received JNJ-56136379 250 milligrams (mg) orally up to 48 weeks.

Arm title	Arm 2: JNJ-73763989 (200mg) + Placebo + NA
------------------	--

Arm description:

Subjects received JNJ-73763989 200 mg as SC injection once every 4 weeks along with placebo matching to JNJ-56136379 tablet orally and NA (either ETV 0.5 mg, TDF 300 mg, or TAF 25 mg) tablets orally once daily up to 48 weeks. Subjects were followed-up to Week 96.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	JNJ-73763989

Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received placebo matching to JNJ-56136379 orally up to 48 weeks.

Investigational medicinal product name	JNJ-73763989
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received JNJ-73763989 100 mg as SC injection up to 48 weeks.

Arm title	Arm 4: JNJ-73763989 (40 mg) + Placebo + NA
------------------	--

Arm description:

Subjects received JNJ-73763989 40 mg as SC injection once every 4 weeks along with placebo matching to JNJ-56136379 tablet orally and NA (either ETV 0.5 mg, TDF 300 mg, or TAF 25 mg) tablet orally once

daily up to 48 weeks. Subjects were followed-up to Week 96.

Arm type	Experimental
Investigational medicinal product name	JNJ-73763989
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received JNJ-73763989 40 mg as SC injection up to 48 weeks.

Investigational medicinal product name	Nucleos(t)ide Analog (NA)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received NA treatment (either ETV 0.5 mg, TDF 300 mg, or TAF 25 mg) orally up to 48 weeks.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received placebo matching to JNJ-56136379 orally up to 48 weeks.

Arm title	Arm 5: Placebo + JNJ-56136379 + NA
------------------	------------------------------------

Arm description:

Subjects received placebo matching to JNJ-73763989 as SC injection and a fixed dose of JNJ-56136379 250 mg oral tablet once daily along with NA (either ETV 0.5 mg, TDF 300 mg, or TAF 25 mg) tablet orally once daily up to 48 weeks. Subjects were followed-up to Week 96.

Arm type	Experimental

Primary: Percentage of Subjects Meeting the Nucleos(t)ide Analog (NA) Treatment Completion Criteria at Week 48

End point title	Percentage of Subjects Meeting the Nucleos(t)ide Analog (NA) Treatment Completion Criteria at Week 48
End point description: Percentage of subject meeting the NA treatment completion criteria at Week 48 was reported. NA completion criteria: subjects had alanine transaminase (ALT) less than (<) 3*upper limit of normal range (ULN); subjects had hepatitis B virus deoxyribonucleic acid (HBV DNA) < lower limit of quantification (LLOQ); subjects had hepatitis B e antigen (HBeAg)-negative; subjects had hepatitis B surface antigen (HBsAg) <10 international units per millilitre (IU/mL). Modified Intent-to-Treat (mITT) analysis set included all subjects who were randomised in the study and received at least one dose of study treatment. Here, 'N' (number of subject analysed) signifies number of subjects who were evaluable for this endpoint excluding those subjects impacted by the pandemic defined as those subjects who, because of COVID-19 or similar pandemics related reasons, withdrew prematurely from the study prior to Week 44.

Secondary: Percentage of Subjects with Adverse Events (AE)

End point title	Percentage of Subjects with Adverse Events (AE)
-----------------	---

End point description:

An AE was any untoward medical occurrence in a clinical study subject administered a medicinal (investigational or non-investigational) product. An AE does not necessarily have a causal relationship with the intervention. Safety analysis set included all subjects who received at least one dose of any of the study treatments. Here, 'n' (number analysed) represents number of subjects evaluable at the specified timepoints.

Secondary: Percentage of Subjects with Serious Adverse Events (SAE)

End point title	Percentage of Subjects with Serious Adverse Events (SAE)
-----------------	--

End point description:

SAE is any untoward medical occurrence that at any dose may result in death, is life-threatening, requires inpatient hospitalization or prolongation of existing hospitalization, results in persistent or significant disability/incapacity, is a congenital anomaly/birth defect, is a suspected transmission of any infectious agent via a medicinal product, and is medically important. Safety analysis set included all subjects who received at least one dose of any of the study treatments. Here, 'n' (number analysed)

represents number of subjects evaluable at the specified category.

End point type	Secondary
End point timeframe:	
DB: Up to 48 weeks, F-U: Week 48 up to Week 96	

End point values	Arm 1: JNJ-73763989 (100 mg) + JNJ-56136379 (250 mg) + NA	Arm 2: JNJ-73763989 (200mg) + Placebo + NA	Arm 3: JNJ-73763989 (100 mg) + Placebo + NA	Arm 4: JNJ-73763989 (40 mg) + Placebo + NA

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of Subjects with Abnormalities in Clinical Laboratory Tests

End point title	Percentage of Subjects with Abnormalities in Clinical Laboratory Tests
-----------------	--

End point description:

Percentage of subjects with abnormalities in clinical laboratory tests were reported. Abnormality was determined at the investigator's discretion. Safety analysis set included all subjects who received at least one dose of any of the study treatments. Here, 'N' (number of subject analysed) signifies number of subjects who were evaluable for this endpoint and 'n' (number analysed) represents number of subjects evaluable at the specified category. AL: Abnormal low; AH: Abnormal high; M.C: Mean corpuscular; GGT: Gamma Glutamyl Transferase; E.C: Epithelial cells. Here, '99999' indicated that data was not available due to less number of subjects.

End point type	Secondary
End point timeframe:

Secondary: Percentage of Subjects with Abnormalities in Electrocardiogram (ECG)

End point title	Percentage of Subjects with Abnormalities in Electrocardiogram (ECG)
End point description:	
Percentage of subjects with abnormalities in ECG parameters (heart rate, PR interval, QRS duration, and QTcF interval) were reported. Abnormality criteria: Heart rate abnormally low (AL): <45 beats per minute (bpm); Heart rate abnormally high (AH): ≥120 bpm; PR interval AH: >220 msec; QRS duration AH: >120 msec; QTcF borderline prolonged (BP) QT: 450 msec to ≤480 msec. Safety analysis set included all subjects who received at least one dose of any of the study treatments. Here, 'N' (number of subject analysed) signifies number of subjects who were evaluable for this endpoint and 'n' (number analysed) represents number of subjects evaluable at the specified timepoints. PP: Pathologically prolonged.

End point description:	
Percentage of subjects with HBsAg seroclearance after completion of NA treatment at Weeks 60, 84 and 96 were reported. A responder was defined as a subject who achieved HBsAg seroclearance at Week 96 if the subject completed 48 weeks of treatment, met the criteria for stopping NA treatment at Week 48, did not require NA re-treatment between Week 48 and Week 96, and had HBsAg seroclearance at Week 96. mITT analysis set included all subjects who were randomised in the study and received at least one dose of study treatment excluding those subjects impacted by the pandemic defined as those subjects who, because of COVID-19 or similar pandemics related reasons, withdrew prematurely from the study prior to Week 44. Here, 'n' (number analysed) represented number of subjects evaluable at the specified timepoints. Here, '99999' indicated that data was not available as no subject was analysed.

Secondary: Change from Baseline in HBV DNA Levels

End point title	Change from Baseline in HBV DNA Levels
-----------------	--

End point description:

Change from baseline in HBV DNA levels were reported. mITT analysis set included all subjects who were randomised in the study and received at least one dose of study treatment excluding those subjects impacted by the pandemic defined as those subjects who, because of COVID-19 or similar pandemics related reasons, withdrew prematurely from the study prior to Week 44. Here, 'N' (number of subject analysed) signifies number of subjects who were evaluable for this endpoint and 'n' (number analysed) represents number of subjects evaluable at the specified category.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
14 November 2019	The main purpose of this amendment-1 was to add liver ultrasound with increased risk for hepatocellular carcinoma (HCC), a timeframe of 30 days prior to screening was added for the use of contraception by female subjects of childbearing potential, exclusion criteria as well as the description of the unblinding procedure were updated, breast cancer resistance protein (BCRP) inhibitors were added as disallowed concomitant medications, and description on control of the Type 1 error rate for multiple testing was updated.
27 January 2020	The main purpose of this amendment-2 was to include the following main changes: based on a nonclinical finding from the preliminary results of the 3-month combination toxicity study with JNJ-56136379 and JNJ-73763989 in the rat, hematologic abnormalities were included as an event of special interest, to trigger a mandatory higher visit frequency with unscheduled visits in case of significant on-treatment reduction in hematologic parameters, and treatment discontinuation criteria were included in relation to hematological abnormalities as precautionary measure.
30 September 2021	The main purpose of this amendment-3 was to include the following main changes: after a severe alanine aminotransferase (ALT) flare in a virologically suppressed hepatitis B e antigen (HBeAg)-negative subject randomised to the control arm in the REEF-2 (73763989PAHPB2002) study, a new nucleos(t)ide analog (NA) re-treatment criterion was added for subjects who discontinued NA treatment at Week 48 or during the follow-up phase; in addition, more frequent monitoring for participants who discontinued NA treatment was included.
24 November 2021	The main purpose of this amendment-4 was to include the additional changes to the criteria for posttreatment monitoring and for NA re-treatment for subjects discontinued NA treatment, to further protect the safety of study subjects.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
