

Clinical trial results:

A 64-week, two-arm, randomized, double-masked, multicenter, phase IIIb study assessing the efficacy and safety of brolucizumab 6 mg compared to aflibercept 2 mg in a treat-to-control regimen in patients with neovascular age-related macular degeneration (TALON)

Summary

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 September 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	09 September 2022
Global end of trial reached?	Yes
Global end of trial date	09 September 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objectives of this study were:

-Distribution of the last interval with no disease activity up to Week 32 (if there was disease activity, the last interval would be shortened by 4 weeks, down to a minimum of 4 weeks)

-Average change in Best-corrected visual acuity (BCVA) from baseline at Weeks 28 and 32

Due to EudraCT system limitations, which EMA is aware of, data using 999 as data points in this record are not an accurate representation of the clinical trial results. Please use <https://www.novctrd.com> for complete trial results.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	25 September 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	69
From 65 to 84 years	570
85 years and over	95

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

734 participants were treated.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Data analyst, Assessor

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Brolucizumab 6 mg
------------------	-------------------

Arm description:

Intra-vitreous injection

Arm type	Experimental
Investigational medicinal product name	Brolucizumab
Investigational medicinal product code	RTH258
Other name	Beovu
Pharmaceutical forms	Solution for injection
Routes of administration	Intravitreal use

Dosage and administration details:

Brolucizumab 6 mg Intravitreal injection

Arm title	Aflibercept 2 mg
------------------	------------------

Arm description:

Intra-vitreous injection

Arm type	Active comparator
Investigational medicinal product name	Aflibercept
Investigational medicinal product code	J0178
Other name	Eylea and Zaltrap
Pharmaceutical forms	Solution for injection
Routes of administration	Intravitreal use

Dosage and administration details:

Aflibercept 2 mg

Number of subjects in period 1	Brolucizumab 6 mg	Aflibercept 2 mg
Started	366	368
Completed	317	307
Not completed	49	61
Adverse event, serious fatal	4	2
Physician decision	7	13

Consent withdrawn by subject	28	38
Adverse event, non-fatal	4	5
Lost to follow-up	6	2
Protocol deviation	-	1

Intra-vitreous injection	

Primary: Distribution of the last interval with no disease activity up to Week 32 - study eye

End point title	Distribution of the last interval with no disease activity up to Week 32 - study eye
End point description:	
No disease activity is defined as no change in visual acuity and no change in other signs of the disease (e.g. Intraretinal Fluid (IRF), Subretinal Fluid (SRF), hemorrhage, leakage, etc.).	
Treatment interval distribution. Number (%) of subjects at 12/8/4-weeks intervals up to Week 32 for the study eye.	
If the study treatment is discontinued before Week 16, then the treatment interval is 4 weeks; otherwise, the last interval with no disease activity is used (if there was disease activity, the last interval is shortened by 4 weeks, down to a minimum of 4 weeks).	
If the duration of the last interval falls within the following ranges of (4-week, 8-week) or (8-week, 12-week) or ≥ 12 -week then the floor value of these ranges was used.	
End point type	Primary

Secondary: Change from baseline in Visual Function Questionnaire-25 (VFQ-25) - Composite scores - study eye

End point title	Change from baseline in Visual Function Questionnaire-25 (VFQ-25) - Composite scores - study eye
-----------------	--

End point description:

The National Eye Institute Visual Function Questionnaire-25 (NEI-VFQ-25) measures the influence of visual disability and visual symptoms on general health domains.

The NEI VFQ-25 consists of a base set of 25 vision-targeted questions representing 11 vision-related constructs, plus an additional single-item general health rating question. All items are scored so that a high score represents better visual functioning. Each item is then converted to a 0 to 100 scale so that the lowest and highest possible scores are set at 0 and 100 points, respectively. A composite score is derived based on the average of the 11 subscales.

Secondary: Change from baseline in Visual Function Questionnaire-25 (VFQ-25) - subscale score - General Vision - study eye

End point title	Change from baseline in Visual Function Questionnaire-25 (VFQ-25) - subscale score - General Vision - study eye
-----------------	---

End point description:

The National Eye Institute Visual Function Questionnaire-25 (NEI-VFQ-25) measures the influence of visual disability and visual symptoms on general health domains.

The NEI VFQ-25 consists of a base set of 25 vision-targeted questions representing 11 vision-related constructs, plus an additional single-item general health rating question. All items are scored so that a high score represents better visual functioning. Each item is then converted to a 0 to 100 scale so that the lowest and highest possible scores are set at 0 and 100 points, respectively.

Statistical analyses

No statistical analyses for this end point

Secondary: Number of participants with treatment emergent non-ocular adverse events (greater than or equal to 2% in any treatment arm) - summary table

End point title	Number of participants with treatment emergent non-ocular adverse events (greater than or equal to 2% in any treatment arm) - summary table
-----------------	---

End point description:

An adverse event (AE) is any untoward medical occurrence (e.g. any unfavorable and unintended sign (including abnormal laboratory findings), symptom or disease) in a subject or clinical investigation subject.

End point type	Secondary
----------------	-----------

End point timeframe:

Adverse events are reported from first dose of study treatment until end of study treatment plus 30 days post treatment, up to a maximum duration of 483 days, approx. 69 weeks, 1.3 years.

End point values	Brolucizumab 6 mg	Aflibercept 2 mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	366	368		
Units: Participants	182	185

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events are reported from first dose of study treatment until end of study treatment plus 30 days post treatment, up to a maximum duration of 483 days, approx. 69 weeks, 1.3 years.

Adverse event reporting additional description:

Consistent with EudraCT disclosure specifications, Novartis has reported under the Serious adverse events field "number of deaths resulting from adverse events" all those deaths, resulting from serious adverse events that are deemed to be causally related to treatment by the investigator.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
02 June 2020	To provide clarification and guidance on safety assessments in accordance to the USM regarding the post-marketing reports with brolocizumab (Beovu ®) in the treatment of nAMD, which were identified as retinal vasculitis (RV) and/or retinal vascular occlusion (RO), typically in the presence of IOI, that may result in severe vision loss. In addition, the amendment included the modifications due to COVID-19 pandemic.
13 August 2021	<p>To provide clarification and guidance on the early discontinuation of study treatment that was required for those subjects who were currently on q4w dosing beyond the first 3 monthly loading doses ("loading phase") or would need q4w dosing beyond the "loading phase" based on the investigator's assessment. This was as per the USM dated 27-May-2021 (based on CTH258AUS04 (MERLIN) Year 1 FIR indicating a higher frequency of IOI including RV, and RO in brolocizumab 6 mg q4w when compared to aflibercept 2 mg q4w (IOI: 9.3% vs 4.5% of which RV: 0.8% vs 0.0%; RO: 2.0% vs 0.0%, respectively).</p> <p>To provide clarification and guidance on the early discontinuation of study treatment that was required for those subjects with RV and RO events. This was as per the USM dated 10-Aug-2021 (based on the results of the mechanistic study BASICHR0049 which identified a causal link with an immune-mediated mechanism of the previously identified risk of RV and/or RO, typically in the presence of IOI).</p> <p>To update safety sections throughout the protocol including updates to the Risks and Benefits section and the creation of a new section under Safety Monitoring which consolidated all risk mitigation information into one section of the protocol.</p>
23 September 2021	To include information on the gender imbalance in the reported rates of IOI-related adverse events following brolocizumab treatment.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to EudraCT system limitations, which EMA is aware of, data using 999 as data points in this record are not an accurate representation of the clinical trial results. Please use <https://www.novctrd.com> for complete trial results.

Notes:
