Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 August 2019
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	09 August 2019
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The main objectives for this study were to explore the relative bioavailability of entrectinib from two multi-particulate formulations and the reference F06 capsule formulation under fed conditions (Part 1) and to explore the relative bioavailability of two entrectinib F06 capsule formulations under fasted conditions (Part 2).

Protection of trial subjects:

All study subjects were required to read and sign an Informed Consent Form

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	06 June 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 31
Worldwide total number of subjects	31
EEA total number of subjects	31

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	31
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This was a single center study conducted in the United Kingdom

Pre-assignment

Screening details:

The study was conducted in healthy volunteers. The screening period was 28 days.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Part 1 T1T2R Sequence

Arm description:

Subjects were randomly assigned to one of the three treatment sequences (T1T2R, T2RT1, RT1T2). In each treatment sequences, subjects crossed over to three periods (each period=7 days) taking different formulations of entrectinib. Entrectinib was administered as a single 600 milligram (mg) oral dose under fed condition in three different formulations. Test formulation 1 (T1): film-coated mini-tablet; Test formulation 2 (T2): film-coated mini-tablet; Reference formulation (R): hard capsule. The washout period between entrectinib doses was at least 14 days.

Arm type	Experimental
Investigational medicinal product name	entrectinib
Investigational medicinal product code	
Other name	test formulation 1 (T1)/F15
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

600 mg (240 × 2.5 mg) entrectinib (T1/F15) film-coated mini-tablets were administered as a single oral dose under fed condition in each period

Investigational medicinal product name	entrectinib
Investigational medicinal product code	
Other name	test formulation 2 (T2)/F16
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

600 mg (240 × 2.5 mg) entrectinib (T2/F16) film-coated mini-tablets were administered as a single oral dose under fed condition in each period

Investigational medicinal product name	entrectinib
Investigational medicinal product code	
Other name	reference formulation (R)/F06
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

600 mg (3 × 200 mg) entrectinib (R/F06) hard capsule was administered as a single oral dose under fed condition in each period

Arm title	Part 1 T2RT1 Sequence
------------------	-----------------------

Arm description:

Subjects were randomly assigned to one of the three treatment sequences (T1T2R, T2RT1, RT1T2). In

each treatment sequences, subjects crossed over to three periods (each period=7 days) taking different formulations of entrectinib. Entrectinib was administered as a single 600 milligram (mg) oral dose under fed condition in three different formulations. Test formulation 1 (T1): film-coated mini-tablet; Test formulation 2 (T2): film-coated mini-tablet; Reference formulation (R): hard capsule. The washout period between entrectinib doses was at least 14 days.

Arm type	Experimental
Investigational medicinal product name	entrectinib
Investigational medicinal product code	
Other name	test formulation 1 (T1)/F15
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

600 mg (240 × 2.5 mg) entrectinib (T1/F15) film-coated mini-tablets were administered as a single oral dose under fed condition in each period

Investigational medicinal product name	entrectinib
Investigational medicinal product code	
Other name	test formulation 2 (T2)/F16
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

600 mg (240 × 2.5 mg) entrectinib (T2/F16) film-coated mini-tablets were administered as a single oral dose under fed condition in each period

Investigational medicinal product name	entrectinib
Investigational medicinal product code	
Other name	reference formulation (R)/F06
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

600 mg (3 × 200 mg) entrectinib (R/F06) hard capsule was administered as a single oral dose under fed condition in each period

Arm title	Part 1 RT1T2 Sequence
------------------	-----------------------

Arm description:

Subjects were randomly assigned to one of the three treatment sequences (T1T2R, T2RT1, RT1T2). In each treatment sequences, subjects crossed over to three periods (each period=7 days) taking different formulations of entrectinib. Entrectinib was administered as a single 600 milligram (mg) oral dose under fed condition in three different formulations. Test formulation 1 (T1): film-coated mini-tablet; Test formulation 2 (T2): film-coated mini-tablet; Reference formulation (R): hard capsule. The washout period between entrectinib doses was at least 14 days.

Arm type	Experimental
Investigational medicinal product name	entrectinib
Investigational medicinal product code	
Other name	test formulation 1 (T1)/F15
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

600 mg (240 × 2.5 mg) entrectinib (T1/F15) film-coated mini-tablets were administered as a single oral dose under fed condition in each period

Investigational medicinal product name	entrectinib
Investigational medicinal product code	
Other name	test formulation 2 (T2)/F16
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

600 mg (240 × 2.5 mg) entrectinib (T2/F16) film-coated mini-tablets were administered as a single oral dose under fed condition in each period

Investigational medicinal product name	entrectinib
Investigational medicinal product code	
Other name	reference formulation (R)/F06
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

600 mg (3 x 200 mg) entrectinib (R/F06) hard capsule was administered as a single oral dose under fed condition in each period

Arm title	Part 2 TR Sequence
------------------	--------------------

Arm description:

Subjects were randomly assigned to one of the two treatment sequences (TR, RT). In each treatment sequences, subjects crossed over to two periods (each period=7 days) taking different formulations of entrectinib. Entrectinib was administered as a single 200 mg oral dose under fasted condition in two different formulations. Test formulation (T): hydroxypropyl methylcellulose (HPMC) capsule; Reference formulation (R): hard capsule. The washout period between entrectinib doses was at least 14 days.

Arm type	Experimental
Investigational medicinal product name	entrectinib
Investigational medicinal product code	
Other name	test formulation (T)/F06 coarse
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

200 mg (1 x 200 mg) entrectinib (T/F06 coarse) hydroxypropyl methylcellulose (HPMC) capsule was administered as a single oral dose under fasted condition in each period

Investigational medicinal product name	entrectinib
Investigational medicinal product code	
Other name	reference formulation (R)/F06 fine
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

200 mg (1 x 200 mg) entrectinib (R/F06 fine) hard capsule was administered as a single oral dose under fasted condition in each period

Arm title	Part 2 RT Sequence
------------------	--------------------

Arm description:

Subjects were randomly assigned to one of the two treatment sequences (TR, RT). Subject analysis set title	Part 1 T1/F15 (Test formulation 1)
Subject analysis set type	Sub-group analysis
Subject analysis set description: Subjects who received a single oral dose of 600 mg (240 × 2.5 mg) entrectinib film-coated mini-tablets in each period (one period=7 days) sprinkled on to, and mixed with, one tablespoon (15 mL) of yoghurt within 30 minutes of consumption of a standardized light "pediatric" breakfast. The washout period between entrectinib doses was at least 14 days.	
Subject analysis set title	Part 1 T2/F16 (Test formulation 2)
Subject analysis set type	Sub-group analysis
Subject analysis set description: Subjects who received a single oral dose of 600 mg (240 × 2.5 mg) entrectinib film-coated mini-tablets in each period (one period=7 days) sprinkled on to, and mixed with, one tablespoon (15 mL) of yoghurt within 30 minutes of consumption of a standardized light "pediatric" breakfast. The washout period between entrectinib doses was at least 14 days.	
Subject analysis set title	Part 1 R/F06 (Reference formulation)
Subject analysis set type	Sub-group analysis
Subject analysis set description: Subjects who received a single oral dose of 600 mg (3 × 200 mg) entrectinib hard capsule in each	

period (one period=7 days) swallowed whole with approximately 240 mL of water within 30 minutes of consumption of a standardized light "pediatric" breakfast. The washout period between entrectinib doses was at least 14 days.

Subject analysis set title	Part 2 T/F06 coarse (Test formulation)
Subject analysis set type	Sub-group analysis

Subject analysis set description:

Subjects who received a single oral dose of 1 x 200 mg entrectinib hydroxypropyl methylcellulose (HPMC) capsule in each period (one period=7 days) swallowed whole with approximately 240 mL of water after an overnight fast (minimum 8 hours). The washout period between entrectinib doses was at least 14 days.

Subject analysis set title	Part 2 R/F06 fine (Reference formulation)
Subject analysis set type	Sub-group analysis

Subject analysis set description:

Subjects who received a single oral dose of 1 x 200 mg entrectinib hard capsule in each period (one period=7 days) swallowed whole with approximately 240 mL of water after an overnight fast (minimum 8 hours). The washout period between entrectinib doses was at least 14 days.

Subject analysis set title	Safety Analysis Population for each of Parts 1 and 2
Subject analysis set type	Safety analysis

Subject analysis set description:

All subjects who received at least 1 dose of investigational medicinal product (IMP)

Subject analysis set title	PK Population for each of Parts 1 and 2
Subject analysis set type	Sub-group analysis

Subject analysis set description:

All subjects who had received at least 1 dose of IMP who satisfied the following criteria for at least one profile: no missing samples or invalid postdose analytical results at critical time points e.g., around the C_{max}; no relevant protocol deviations which may have impacted the study objectives with respect to the PK endpoints; no relevant AEs, such as vomiting, which suggested that the dose was not absorbed for a particular subject

-----------------	---

End point description:

An adverse event (AE) is any untoward medical occurrence in a subject administered a pharmaceutical product and which does not necessarily have to have a causal relationship with the treatment. An adverse event can therefore be any unfavorable and unintended sign (including an abnormal laboratory finding, for example), symptom, or disease temporally associated with the use of a pharmaceutical product, whether or not considered related to the pharmaceutical product. Preexisting conditions which worsen during a study are also considered as adverse events. Treatment-emergent adverse events (TEAEs) are AEs that were not present before the first dose of study drug or that were present before the first dose of study drug but worsened in intensity during exposure to study drug. The analysis population included all subjects in Part 1 and Part 2, who received at least one dose of entrectinib.

End point type	Secondary
----------------	-----------

End point timeframe:

From Day -1 to Day 5 of each periods (each period=7 days)

End point values	Part 1 T1/F15 (Test formulation 1)	Part 1 T2/F16 (Test formulation 2)	Part 1 R/F06 (Reference formulation)	Part 2 T/F06 coarse (Test formulation)

End point values	Part 2 R/F06 fine (Reference formulation)			
Subject group type	Subject analysis set			
Number of subjects analysed	16			
Units: Percentage of Subjects				
number (not applicable)	37.5			

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Day -1 through Day 5 of each period in both Part 1 and Part 2 (one period=7 days)

Adverse event reporting additional description:

The analysis population included all subjects in Part 1 and Part 2, who received at least one dose of entrectinib.

Assessment type	Systematic

Reporting groups

Reporting group title	Part 1 T1/F15 (Test formulation 1)
-----------------------	------------------------------------

Reporting group description:

Participants who received a single oral dose of 600 mg (240 × 2.5 mg) entrectinib film-coated mini-tablets in each period (one period=7 days) sprinkled on to, and mixed with, one tablespoon (15 mL) of yoghurt within 30 minutes of consumption of a standardized light "pediatric" breakfast. The washout period between entrectinib doses was at least 14 days.

Reporting group title	Part 1 T2/F16 (Test formulation 2)
-----------------------	------------------------------------

Reporting group description:

Participants who received a single oral dose of 600 mg (240 × 2.5 mg) entrectinib film-coated mini-tablets in each period (one period=7 days) sprinkled on to, and mixed with, one tablespoon (15 mL) of yoghurt within 30 minutes of consumption of a standardized light "pediatric" breakfast. The washout period between entrectinib doses was at least 14 days.

Reporting group title	Part 2 T/F06 coarse (Test formulation)
-----------------------	--

Reporting group description:

Participants who received a single oral dose of 1 × 200 mg entrectinib hydroxypropyl methylcellulose (HPMC) capsule in each period (one period=7 days) swallowed whole with approximately 240 mL of water after an overnight fast (minimum 8 hours). The washout period between entrectinib doses was at least 14 days.

Reporting group title	Part 1 R/F06 (Reference formulation)
-----------------------	--------------------------------------

Reporting group description:

Participants who received a single oral dose of 600 mg (3 × 200 mg) entrectinib hard capsule in each period (one period=7 days) swallowed whole with approximately 240 mL of water within 30 minutes of consumption of a standardized light "pediatric" breakfast. The washout period between entrectinib doses was at least 14 days.

Reporting group title	Part 2 R/F06 fine (Reference formulation)
-----------------------	---

Reporting group description:

Participants who received a single oral dose of 1 × 200 mg entrectinib hard capsule in each period (one period=7 days) swallowed whole with approximately 240 mL of water after an overnight fast (minimum 8 hours). The washout period between entrectinib doses was at least 14 days.

Serious adverse events	Part 1 T1/F15 (Test formulation 1)	Part 1 T2/F16 (Test formulation 2)	Part 2 T/F06 coarse (Test formulation)
Total subjects affected by serious adverse events			
subjects affected / exposed	0 / 15 (0.00%)	0 / 15 (0.00%)	0 / 16 (0.00%)
number of deaths (all causes)	0	0	0
