Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	10 March 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	11 October 2021
Global end of trial reached?	Yes
Global end of trial date	11 October 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To estimate the time to seroconversion of the different schedules of accelerated TBE vaccination based on reactogenicity data up to 28 days after the first dose.

Protection of trial subjects:

Since this can be considered a low-risk clinical trial; testing only a registered vaccine, a Data and Safety Monitoring Board will not be installed for this study. However, an Independent Expert Group will be set-up to review and advise on any SAE reported in the study. This Independent Expert Group will consist of at least 2 medical doctors with relevant experience who are not part of the study team.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 May 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 77
Worldwide total number of subjects	77
EEA total number of subjects	77

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	77
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Ninety-six (96) patients were screened, and 77 patients were enrolled. Nineteen (19) patients were excluded at enrolment. All 77 patients completed the primary vaccination. Sixty-seven (67) patients completed the booster vaccination, 4 were lost to follow-up and 6 withdrew consent.

Pre-assignment

Screening details:

Ninety-six (96) patients were screened, and 77 patients were enrolled. Nineteen (19) patients were excluded at enrolment.

Period 1

Period 1 title	Primary vaccination period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

NA. Open-label study

Arms

Are arms mutually exclusive?	Yes
Arm title	Group 1

Arm description:

Classic accelerated schedule

Day 0: 1 dose 0.5ml IM

Day 14: 1 dose 0,5 ml IM

Arm type	Active comparator
Investigational medicinal product name	FSME Immun ® vaccine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Day 0: 1 dose 0.5ml intra-muscular

Day 14: 1 dose 0,5 ml intra-muscular

Arm title	Group 2
------------------	---------

Primary: Time to seropositivity

End point title	Time to seropositivity ^[1]
End point description: ITT analysis	
End point type	Primary
End point timeframe: Up to day 28 after the first injection	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Due to the nature of this pilot study, and the relatively small sample size, no formal statistical comparisons were planned.

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

- Occurrence of solicited local and general symptoms within 7 days after each vaccination.
- Occurrence of (vaccine-related) AEs for 7 days after each vaccination.
- Occurrence of (vaccine-related) SAEs for 14 days after each vaccination.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
29 April 2019	The protocol was amended in response to a comment from the FAGG on the initial submission. Changes: <ul style="list-style-type: none">- Addition of the inclusion criterium "willing to take contraception until the last vaccination (for women of childbearing potential)"- Addition of pregnancy testing (urine) at every vaccination visit
28 October 2019	According to version 1.2 of the protocol, the intradermal injections would be prepared by the study nurses, just before administration to the patient. However, to provide a more controlled setting the intradermal syringes will be created by the hospital pharmacist or a delegated person at the Hospital pharmacy. It will be possible to trace the created intradermal syringes back to the batch number of the original vials.
14 July 2020	Changes: <ul style="list-style-type: none">- Extra follow-up assessment on local reactions during month 3 and month 6 visit.- Including interim safety analysis after month 6 visit.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
