

Clinical trial results:

A 24-week, phase 3, multicentre, randomised, double-blind, efficacy and safety study, comparing GSK3196165 with placebo and with sarilumab, in combination with conventional synthetic DMARDs, in participants with moderately to severely active rheumatoid arthritis who have an inadequate response to biological DMARDs and/or Janus Kinase inhibitors.

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	15 March 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	01 February 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To compare efficacy and safety of GSK3196165 (Otilimab) versus placebo and sarilumab in participants with moderately to severely active rheumatoid arthritis.

Protection of trial subjects:

Not applicable

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	31 October 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 104
Country: Number of subjects enrolled	Belgium: 1
Country: Number of subjects enrolled	Canada: 2
Country: Number of subjects enrolled	Czechia: 46
Country: Number of subjects enrolled	Germany: 12
Country: Number of subjects enrolled	Hungary: 6
Country: Number of subjects enrolled	Japan: 38
Country: Number of subjects enrolled	Lithuania: 6
Country: Number of subjects enrolled	Poland: 108
Country: Number of subjects enrolled	South Africa: 11
Country: Number of subjects enrolled	Korea, Democratic People's Republic of: 5
Country: Number of subjects enrolled	Spain: 8
Country: Number of subjects enrolled	United Kingdom: 4
Country: Number of subjects enrolled	United States: 199
Worldwide total number of subjects	550
EEA total number of subjects	187

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	419
From 65 to 84 years	131
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants were randomized in a ratio of 6:6:6:1:1:1 to 3 experimental and 3 Placebo arms. At Week 12, participants randomized to one of the three placebo arms switched to experimental arms, receiving the active intervention for 12 weeks. Participants randomized to experimental arms from study start received the active intervention for 24 weeks.

Pre-assignment

Screening details:

Analysis was reported for experimental, and all placebo arms are pooled till Week 12 to serve as reference for comparison. Total 550 participants were randomized; one participant withdrew from 90mg GSK3196165 before receiving intervention due to Protocol Deviation. The participant was removed from intent-to-treat and safety population (N=549).

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	GSK3196165 90mg + csDMARD

Arm description:

Participants between the ages of greater than or equal to (\geq)18 years and less than or equal to (\leq)84 years received GSK3196165 90 mg + csDMARD administered by weekly subcutaneous injection.

Arm type	Experimental
Investigational medicinal product name	GSK3196165
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received 90mg of GSK3196165 once every week

Arm title	GSK3196165 150mg + csDMARD
------------------	----------------------------

Arm description:

Participants between the ages of greater than or equal to (\geq)18 years and less than or equal to (\leq)84 years received GSK3196165 150 mg + csDMARD administered by weekly subcutaneous

Arm type	Experimental
Investigational medicinal product name	GSK3196165
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received 150mg of GSK3196165 once every week

Arm title	Sarilumab 200mg + csDMARD
------------------	---------------------------

Arm description:

Participants between the ages of greater than or equal to (\geq)18 years and less than or equal to (\leq)84 years received Sarilumab 200 mg + csDMARD administered by subcutaneous injection of sarilumab every other week plus with placebo injection in the intervening weeks to maintain the blind.

Arm type	Active comparator
Investigational medicinal product name	Sarilumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received 200mg of Sarilumab once every alternate week.

Arm title	Placebo + csDMARD and GSK3196165 90mg + csDMARD
------------------	---

Arm description:

Participants between the ages of greater than or equal to (\geq)18 years and less than or equal to (\leq)84 years received Placebo +csDMARD until Week 12 later switched toGSK3196165 90 mg +csDMARD administered by weekly subcutaneous injection.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received placebo once every week until Week 12

Investigational medicinal product name	GSK3196165
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received 90mg of GSK3196165once every week from Week 12 to Week 24.

Arm title	Placebo + csDMARD and GSK3196165 150mg + csDMARD
------------------	--

Arm description:

Participants between the ages of greater than or equal to (\geq)18 years and less than or equal to (\leq)84 years received Placebo + csDMARD until Week 12 later switched to GSK3196165 150 mg + csDMARD administered by weekly subcutaneous injection.

Arm type	Placebo
Investigational medicinal product name	GSK3196165
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received 150mg of GSK3196165once every week from Week 12 to Week 24.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received placebo once every week until Week 12

Arm title	Placebo + csDMARD and Sarilumab 200mg + csDMARD
------------------	---

Arm description:

Participants between the ages of greater than or equal to (\geq)18 years and less than or equal to (\leq)84 years received Placebo + csDMARD until Week 12 later switched to Sarilumab 200mg + csDMARD

administered by subcutaneous injection of sarilumab every other week plus with placebo injection in the intervening weeks to maintain the blind.

Arm type	Placebo
Investigational medicinal product name	Sarilumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received 200mg of Sarilumab once every alternate week between Week 12 to Week24

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received placebo once every week until Week 12

Secondary: Change from Baseline in Health Assessment Questionnaire Disability Index (HAQ-DI) (versus Placebo) at Week 12

End point title	Change from Baseline in Health Assessment Questionnaire Disability Index (HAQ-DI) (versus Placebo) at Week 12 ^[2]
-----------------	--

End point description:

Health Assessment Questionnaire-Disability Index (HAQ-DI) is a 20-question instrument that assesses the difficulty of a participant in eight domains of daily living activities: Dressing & grooming, Arising, Eating, Walking, Hygiene, Reach, Grip, Common daily activities. Overall HAQ-DI score was computed as the sum of the domain scores divided by the number of domains answered. The total possible score ranges from 0 to 3 where 0 = least difficulty and 3 = extreme difficulty. Higher overall score indicates greater disability. A negative change from baseline indicates an improvement. For the purpose of all analyses up to week 12, the placebo arms were pooled into a single placebo arm to primarily serve as a reference for the comparison of active treatment arms.

End point type	Secondary

-----------------	--

End point description:

Clinical Disease Activity Index (CDAI) total score is a composite score consisting of the sum of Swollen Joint Count 28 (TJC28), Tender Joint Count 28 (TJC28), Patient's Global Assessment of Arthritis Disease Activity (PtGA) (visual analogue scale with values from 0=best to 100=worst) and Physician Global Assessment of Arthritis Disease Activity (PhGA) (visual analogue scale with values from 0=best to 100=worst). CDAI total score ranges from 0 to 76 with higher values representing higher disease activity. Low disease activity (LDA) is achieved when CDAI total score ≤10. For the purpose of all analyses up to week 12, the placebo arms were pooled into a single placebo arm to primarily serve as a reference for the comparison of active treatment arms.

Secondary: Change from Baseline in SF-36 MCS at Week 24 for placebo switched arms that started study intervention from Week 12

End point title	Change from Baseline in SF-36 MCS at Week 24 for placebo switched arms that started study intervention from Week 12 ^[54]
-----------------	---

End point description:

The Short-Form 36 (SF-36) is a health-related survey that assesses quality of life covering 8 domains: physical functioning, bodily pain, role limitations due to physical and emotional problems, general health, mental health, social functioning, vitality. The score for a domain was an average of the individual question scores, which were scaled 0-100; higher score represents better health. The MCS is an aggregated score derived from 4 domains (social functioning, vitality, mental health, and role-emotional domains) representing overall mental health. T-score scale was used for MCS with mean of 50 and SD of 10; higher score represents better health. A positive change from baseline indicates an improvement in overall mental health. Quality Metrics software was used for scoring for SF-36.

Blood samples were collected for markers which may influence rheumatoid arthritis. Concentrations of GM-CSF autoantibodies was determined.

End point type	Secondary
----------------	-----------

End point timeframe:

At baseline

Notes:

[95] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The endpoints are different for the different parts of the study.

End point values	GSK3196165 90mg + csDMARD	GSK3196165 150mg + csDMARD	Sarilumab 200mg + csDMARD	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	156	158	156	
Units: ug/L (microgram per liter)				
arithmetic mean (standard deviation)	334.008 (± 823.7538)	417.378 (± 1632.7755)	250.015 (± 671.9296)	

Statistical analyses

No statistical analyses for this end point

Secondary: Number of participants with anti-GSK3196165 antibodies

End point title	Number of participants with anti-GSK3196165 antibodies ^[96]
-----------------	--

End point description:

Blood samples were collected for anti-GSK3196165 antibodies detection assay using tiered testing schema: screening, confirmation and titration steps was used for immunogenicity analysis.

End point type	Secondary
----------------	-----------

End point timeframe:

Up to Week 24

Notes:

[96] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The endpoints are different for the different parts of the study.

Statistical analyses

No statistical analyses for this end point

Other pre-specified: Change from Baseline 4-beta-hydroxy cholesterol, cholesterol at (Millimoles per liter) Week 12

End point title	Change from Baseline 4-beta-hydroxy cholesterol, cholesterol at (Millimoles per liter) Week 12 ^[97]
-----------------	--

End point description:

Blood samples was collected for the assessment of change from baseline in lipid profile parameter including 4-beta-hydroxycholesterol, cholesterol levels. For the purpose of all analyses up to week 12, the placebo arms were pooled into a single placebo arm to primarily serve as a reference for the comparison of active treatment arms.

End point type	Other pre-specified
----------------	---------------------

End point timeframe:

Baseline and Week 12

Notes:

[97] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The endpoints are different for the different parts of the study.

Reporting groups

Reporting group title	GSK3196165 90mg + csDMARD
-----------------------	---------------------------

Reporting group description:

Participants between the ages of greater than or equal to (\geq)18 years and less than or equal to (\leq)84 years received GSK3196165 90 mg + csDMARD administered by weekly subcutaneous injection.

Reporting group title	Sarilumab 200mg + csDMARD
-----------------------	---------------------------

Reporting group description:

Participants between the ages of greater than or equal to (\geq)18 years and less than or equal to (\leq)84 years received Sarilumab 200 mg + csDMARD administered by subcutaneous injection of sarilumab every other week plus with placebo injection in the intervening weeks to maintain the blind.

Reporting group title	Placebo + csDMARD and Sarilumab 200 mg + csDMARD
-----------------------	--

Reporting group description:

Participants received Placebo + csDMARD until Week 12 later switched to Sarilumab 200 mg + csDMARD administered by subcutaneous injection of sarilumab every other week plus with placebo injection in the intervening weeks to maintain the blind.

Reporting group title	Placebo + csDMARD and GSK3196165 90 mg + csDMARD
-----------------------	--

Reporting group description:

Participants received Placebo + csDMARD until Week 12 later switched to GSK3196165 90 mg + csDMARD administered by weekly subcutaneous injection.

Reporting group title	Placebo + csDMARD and GSK3196165 150 mg + csDMARD
-----------------------	---

Reporting group description:

Participants received Placebo + csDMARD until Week 12 later switched to GSK3196165 150 mg + csDMARD administered by weekly subcutaneous injection.

Reporting group title	GSK3196165 150mg + csDMARD
-----------------------	----------------------------

Reporting group description:

Participants between the ages of greater than or equal to (\geq)18 years and less than or equal to (\leq)84 years received GSK3196165 150 mg + csDMARD administered by weekly subcutaneous

Reporting group title	Pooled Placebo
-----------------------	----------------

Reporting group description:

Participants between the ages of greater than or equal to (\geq)18 years and less than or equal to (\leq)84 years received Placebo + csDMARD administered by weekly subcutaneous injection until Week 12. The placebo arms are pooled into a single placebo arm.
