

Clinical trial results:

A Phase 3 Multicenter, Double-Blind, Randomized, Placebo-Controlled Study to Evaluate the Efficacy, Safety, and Tolerability of Rozanolixizumab in Adult Study Participants With Persistent or Chronic Primary Immune Thrombocytopenia (ITP)

Summary

EudraCT number	2019-000884-26
Trial protocol	PL BG HU BE CZ AT ES NL GB FR GR IT HR RO
Global end of trial date	27 April 2022

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	05 October 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	21 March 2022
Global end of trial reached?	Yes
Global end of trial date	27 April 2022
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

Demonstrate the clinical efficacy of rozanolixizumab in maintenance treatment in study participants with primary immune thrombocytopenia

Protection of trial subjects:

During the conduct of the study all participants were closely monitored.

Background therapy:

Background therapy as permitted in the protocol.

Evidence for comparator:

Not applicable

Actual start date of recruitment	31 January 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	France: 1
Country: Number of subjects enrolled	Georgia: 4
Country: Number of subjects enrolled	Hungary: 3
Country: Number of subjects enrolled	Italy: 1
Country: Number of subjects enrolled	Japan: 3
Country: Number of subjects enrolled	Korea, Republic of: 1
Country: Number of subjects enrolled	Moldova, Republic of: 2
Country: Number of subjects enrolled	Poland: 10
Country: Number of subjects enrolled	Russian Federation: 1
Country: Number of subjects enrolled	Taiwan: 1
Country: Number of subjects enrolled	Ukraine: 5
Country: Number of subjects enrolled	United Kingdom: 1
Worldwide total number of subjects	33
EEA total number of subjects	15

Notes:

Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	29
From 65 to 84 years	4
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study started to enroll study participants in Jan 2020 and terminated in April 2022.

Pre-assignment

Screening details:

Participant Flow refers to the Randomized Set.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Participants received a fixed-unit starting dose of placebo subcutaneous (sc) infusion matched to rozanolixizumab Dose A on Day 1. Following the initial dose, participants received a fixed-unit dose of placebo sc infusion matched to rozanolixizumab Dose B every 2 weeks until Week 23. Participants were followed up to a maximum of Week 31.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received placebo at prespecified time points.

Arm title	Rozanolixizumab
------------------	-----------------

Arm description:

Participants received a fixed-unit starting dose of rozanolixizumab sc infusion equivalent to Dose A on Day 1. Following the initial dose, participants received a fixed-unit dose of rozanolixizumab sc infusion equivalent to Dose B every 2 weeks until Week 23. After protocol amendment 3, the starting dose was removed and the frequency of administration of the Dose B was changed to weekly. Participants were followed up to a maximum of Week 31.

Arm type	Experimental
Investigational medicinal product name	Rozanolixizumab
Investigational medicinal product code	UCB7665
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received rozanolixizumab at prespecified time points.

Number of subjects in period 1	Placebo	Rozanolixizumab
Started	12	21
Completed	9	15
Not completed	3	6
Consent withdrawn by subject	2	2
Physician decision	-	1
Administration of Rescue and concern about IMP	-	1
Adverse event, non-fatal	-	1
Lack of efficacy	1	1

Secondary: Change from Baseline to Week 25 in Primary Immune Thrombocytopenia Patient Assessment Questionnaire (ITP-PAQ) Symptoms Score

End point title	Change from Baseline to Week 25 in Primary Immune Thrombocytopenia Patient Assessment Questionnaire (ITP-PAQ) Symptoms Score
-----------------	--

End point description:

ITP-PAQ version 1 is a 44 item disease-specific Health-Related Quality of Life questionnaire developed for use in adults with chronic ITP. It includes 10 scales as physical health: Symptoms (6 items), Bother (3 items), Fatigue (4 items), Activity (2 items); emotional health: Fear (5 items) and Psychological (5 items); quality of life (QOL): Work QOL (4 items), Social QOL (4 items), Women's Reproductive QOL (6 items) and Overall QOL (5 items). Each item is rated on a Likert-type scale containing 4 to 7 responses. All item scores are transformed to a 0 to 100 continuum and are weighted equally to derive individual scale scores and total score (0-100) is calculated as per formula: Sum of item scores within the

scale/raw sum range*100. Higher scores indicate better health status. Randomized Set: enrolled study participants who were randomized. Number of Participants analyzed signifies participants evaluable for this endpoint. No formal analysis was carried out as program was terminated.

Secondary: Percentage of Participants With treatment-emergent adverse events (TEAEs)

End point title	Percentage of Participants With treatment-emergent adverse events (TEAEs)
-----------------	---

End point description:

An adverse event (AE) is any untoward medical occurrence in a patient or clinical study participant, temporally associated with the use of investigational medicinal product (IMP), whether or not considered related to the IMP. An AE can therefore be any unfavorable and unintended sign (including an abnormal laboratory finding), symptom, or disease (new or exacerbated) temporally associated with the use of IMP. TEAEs are defined as AEs starting after the time of first IMP administration up to and including 8 weeks (56 days) after the final dose. Safety set included all randomized study participants who received at least one dose of IMP.

End point type	Secondary
End point timeframe:

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 November 2019	<p>The primary purpose of this substantial amendment (21 Nov 2019) was to incorporate the feedback from the United States Food and Drug Administration (FDA) received on 23 October 2019. In addition to updates to provide clarity and consistency within the protocol and administrative revisions, the following modifications were made:</p> <ul style="list-style-type: none">• Added details on study stopping rules• Added ADA postdose samples to facilitate clinical validation of drug tolerance in the ADA assay• Eligibility criteria were modified to exclude participants with undiagnosed IgA deficiency and to include patients with moderate renal impairment.• Updated rescue therapy to include any systemic increase in corticosteroids dose above the Baseline dose• Included new wording specific to the predefined order of formal hypotheses testing and the sequence in which testing would be performed• Added an additional estimand for a secondary endpoint• Provided timing for obtaining IgG samples due to interference of other tests• Country-specific requirements:<ul style="list-style-type: none">– Information specific to Moldova was no longer applicable to the study.– Updates to Poland were made to align with Polish Health Authority's and Clinical Trial Facilitation Group recommendations regarding pregnancy testing.• Added new wording that local guidelines should be followed regarding antibiotic prophylaxis in asplenic participants to remind investigators about the importance of antibiotic therapy in management of infections in splenectomized participants.
29 September 2020	<p>The primary reason for this substantial amendment (29 Sep 2020) was to incorporate changes in the endpoints and the statistical analysis section, and to incorporate agency-required local protocol amendments into 1 global protocol. The country-specific changes were incorporated in Protocol Amendment 2 Appendix. In addition to updates to provide clarity and consistency within the protocol and administrative revisions, the following modifications were made:</p> <ul style="list-style-type: none">• Changed the number of additional participants that could be recruited into the study from 75 to 60 (maximum total sample size was changed from 105 to 90) based on revised sample size calculation method and assumptions• Primary analysis (previously incorporated by local Protocol Amendments 1.1, 1.2, and 1.3) – Removed all reference to the Fisher's Exact test and included as a separate supplemental estimand– Added more details regarding the Cochran-Mantel-Haenszel test• Added details to explain that the interim analysis was to have been conducted on combined data from TP0003 and TP0006, including amendment of the futility stopping rule• Modified study criteria to include study participants who had failed or were intolerant to 2 or more prior ITP therapies per global implementation of an ANSM request and implement feedback received from the FD• Deleted or moved to "other efficacy endpoints" endpoints that did not measure different manifestation of the disease and provided redundant information• Included additional "other" efficacy endpoints• Provided additional wording for clarification on the action taken for study participants on the lowest dose level with a platelet count between $>200 \times 10^9/L$ and $<400 \times 10^9/L$ (previously incorporated by local Protocol Amendments 1.2 and 1.3).

29 September 2020	This includes the continued information from Protocol Amendment 2 • Added that an independent Quantitative Clinical Pharmacologist/Modeling and Simulation Scientist may have access to the randomization code to review unblinded PK, platelet and serum IgG data to allow modelling activities to be started by an independent scientist • Explained that contingency measures during a pandemic and other exceptional circumstances had been included • Increased the number of sites from 50 to 70 • Country-specific requirements: – United States and Canada only: Updated and clarified study stopping rule per FDA request to change the study stopping rule – Japan only (previously incorporated by local Protocol Amendment 1.2): • Added instructions for SAE reporting (investigational device) and device deficiency reporting specific for Japan, in accordance with local regulations in Japan • Added chest X-ray assessment to early withdrawal (EW) visit and EOS visit to confirm safety at study termination • Added the T-SPOT test as a recommended IGRA test in addition to the QuantiFERON test • Included details on the consent requirements for participants aged <20 years of age • Added exclusion criterion relative to partial splenic artery embolization as this procedure might have been used for treatment of ITP in Japan • Removed wording on use of cannabinoids and medicinal marijuana because these drugs are prohibited by law in Japan.
03 December 2021	The primary reason for this substantial amendment (03 Dec 2021) was to modify the dosing regimen of the study on the recommendation of the IDMC. Only 1 study participant was enrolled under Protocol Amendment 3, and this participant was not treated prior to study termination. Thus, this aCSR, including analysis of the data for this study, was based on the protocol under Amendment 2.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
24 March 2020	From 24 March 2020 through 04 June 2020, enrollment into the study was temporarily on hold due to the coronavirus disease 2019 (COVID-19) pandemic outbreak.	05 June 2020
19 November 2021	From 19 Nov 2021, enrollment into the study was temporarily suspended to allow for the development of a protocol amendment (#3) to change the dosing frequency from biweekly to weekly. Reactivation commenced on 19 March 2022 with first screening after the re-start occurring 06 April 2022.	06 April 2022
